Table of Contents

Foreword xi
Muriel BRACCINI and Michel DUPEUX

PART 1. FUNDAMENTALS 1

Chapter 1. Interfaces: the Physics, Chemistry and Mechanics of Heterogeneous Continua 3
Michel DUPEUX and Muriel BRACCINI

1.1. Definition and terminology 3
1.2. Energy considerations 5
1.3. Elastic behavior of an interface 8
1.3.1. Flat interface. 8
1.3.2. Effects of elastic coupling. 13
1.3.3. Ellipsoidal elastic inclusion 15
1.4. Experimental stress analysis techniques 18
1.4.1. Digital image correlation 18
1.4.2. Incremental hole-drilling method 19
1.4.3. X-ray diffraction. 21
1.4.4. Numerical modeling 23
1.5. Conclusion 24
1.6. Bibliography 25

Chapter 2. Structure and Defects of Crystalline Interfaces 27
Louisette PRIESTER

2.1. What is a crystalline interface? 27

2.2. Definitions and geometric tools to describe interfaces 29
2.2.1. Formation of an interface 29
2.2.2. Coincidence lattice. 32
2.2.3. Translation lattice of the bicrystal 34
2.3. Structure of interfaces: intrinsic dislocations and structural units 34
2.3.1. Continuous approach to strain at the interface . . . 35
2.3.2. First discrete approach: Read and Shockley model 36
2.3.3. Extension of the discrete approach to any grain boundary: Bollmann's model 38
2.3.4. Intrinsic dislocations and atomic-level description of interfaces 43
2.4. Linear interface defects: extrinsic dislocations. 46
2.5. Interaction between dislocations and interfaces: relaxation of interfacial stresses 47
2.5.1. Slip transmission processes across an interface . . 47
2.5.2. Relaxation processes in the interface 50
2.5.3. Interfacial dislocation stress fields 53
2.5.4. Evolution of stress fields over time 56
2.6. Conclusion 59
2.7. Bibliography 60

PART 2. SINGULARITIES, NOTCHES AND INTERFACIAL CRACKS 65

Chapter 3. Singularities and Interfacial Cracks 67
Dominique LEGUILLON

3.1. Introduction 67
3.2. Singularities 69
3.2.1. A generic case – the V-notch 70
3.2.2. Calculation of the GSIFs. 73
3.2.3. The case of interfaces: complex singularities 75
3.2.4. A particular case 76
3.3. Modal mixity 78
3.4. Brittle fracture mechanics 80
3.4.1. The Griffith criterion 81
3.4.2. Kinking of a crack out of the interface. 83
3.5. Nucleation of cracks 85
3.5.1. Energy condition 86
3.5.2 Stress condition 88

3.5.3. The nucleation criterion 89
3.6. Deflection of a crack at an interface 91
3.6.1. Weak singularity 92
3.6.2. Strong singularity 94
3.7. Conclusion 96
3.8. Bibliography 97

Chapter 4. Interface Adherence 101
Muriel BRACCINI

4.1. Adhesion and adherence. 101
4.2. Mode mixity 104
4.3. Measurement of adherence 107
4.3.1. Grid method 108
4.3.2. Pull test 108
4.3.3. Tape peel test 109
4.3.4. Peel test 111
4.3.5. Bulge-and-blister test 113
4.3.6. Indentation methods (normal and transverse). . . . 116
4.3.7. Wedge test 121
4.3.8. Four-point bending. 124
4.4. Conclusion: choosing a test 126
4.5. Bibliography 127

PART 3. PRACTICAL APPLICATIONS 135

Chapter 5. Controlling Adherence 137
Thomas PARDOEN, Olivier DEZELLUS and Muriel BRACCINI.

5.1. Introduction 137
5.2. Multiscale adherence modeling 140
5.3. Nature and control of interface bonds 145
5.3.1. Elimination of barriers to adhesion 150
5.3.2. Modification of interface chemistry 154
5.3.3. Reactivity and joining 160
5.3.4. Conclusion 162
5.4. Dissipative mechanisms 163
5.5.The effect of interface geometry 173
5.5.1. Mechanical anchoring 173
5.5.2. Microtextured interface. 175
5.5.3. Biomimetics 177
5.6. Conclusion 178
5.7. Bibliography 180

Chapter 6. Crack–interface Interaction 189
Eric MARTIN

6.1. Propagation of a crack near an interface. 191
6.2. Criterion of crack deviation by an interface. 194
6.3. Propagation of an interfacial crack 202
6.4. Branching criterion of a crack outside an interface. . . 204
6.5. Conclusion 205
6.6. Bibliography 206

Chapter 7. Shock Mechanics and Interfaces. 211
Michel ARRIGONI, Michel BOUSTIE, Cyril BOLIS,
Sophie BARRADAS, Laurent BERTHE and Michel JEANDIN

7.1. Introduction to shock wave mechanics 211
7.1.1. Preface 211
7.1.2. Generation of shock waves. 213
7.1.3. Shock wave mechanics relationships. 214
7.1.4. Determination of the Hugoniot in plane P–U
(the one-dimensional case) 220
7.1.5. Passage of a shock between two materials 221
7.2. Damage under shock. 227
7.2.1. Spallation phenomenon 227
7.2.2. Some damage criteria. 228
7.3. Application to the shock adhesion test 230
7.3.1. Principle 230
7.3.2. Evaluation of the test on Al–Cu samples 231
7.3.3. Tests on glued assemblages. 236
7.4 Retrospective: recent advances made in shock
adherence testing. 240
7.4.1. Technological advances 240
7.4.2. Analytical approaches 241
7.4.3. Contributions of numerical simulation 242
7.5. Perspectives 243
7.6. Bibliography 243

PART 4. THIN FILMS 249

Chapter 8. Coating–Substrate Interfaces 251
Michel DUPEUX

8.1. Thin films on massive substrates: a typical case 251
8.2. State of stress in a thin film–substrate specimen 252

8.2.1. Boundary conditions 252
8.2.2. Strain and stress tensors in the film 253
8.2.3. Strain and stress in a planar substrate 255
8.2.4. Edge effects 259
8.3. Residual strains in thin films 262
8.3.1. Physical and chemical origin of stresses 262
8.3.2. Thermoelastic stresses 263
8.3.3. Extrinsic stresses 264
8.3.4. Intrinsic stresses 264
8.4. Determination of stresses in thin films 266
8.4.1. Problems 266
8.4.2. Some frequent tests for the characterization of thin films and their residual stresses 267
8.5. Conclusions 269
8.6. Bibliography 270

Chapter 9. Damage in Thin Films on Substrates 273
Michel DUPEUX, Muriel BRACCINI and Guillaume PARRY.

9.1. Overview 273
9.1.1. Typical damage 274
9.1.2. Elastically stored energy 275
9.2. Layers in tension 277
9.2.1. Typology of damages in layers in tension 277
9.2.2. Energy balance of crack growth at the film–substrate interface 280
9.2.3. Stress corrosion cracking 282
9.3. Films in compression 284
9.3.1. Typology of damage in films under compression . . 284
9.3.2. Mechanical modeling of ripples and blisters 285
9.4. Conclusion 291
9.5. Bibliography 292

List of Authors 295
