Introduction	xiii
Hervé ZWIRN	
 Chapter 1. A Brief Introduction to Quantum Mechanics and a Review of Interpretations	1
Hervé ZWIRN	
1.1. Quantum formalism	2
1.1.1. States and observations	2
1.1.2. Evolution of the state of a system without and with measurement	3
1.2. The measurement problem	4
1.3. Interpretations	7
1.3.1. Changes in formalism	7
1.3.2. The Copenhagen interpretation	8
1.3.3. The dualist interpretation of von Neumann, Wigner, London and Bauer	9
1.3.4. Everett's interpretation	10
1.3.5. Relational interpretation	11
1.3.6. QBism	11
1.3.7. Pragmatism.	12
1.3.8. Convivial solipsism.	13
1.4. Conclusion	14

Chapter 2. Bohrian Realism	15
Thomas RYCKMAN	
2.1. The observational problem.	16
2.2. Objectivity	18
2.3. Subject and object	19
2.4. Redefining “phenomenon”.	24
2.5. Realism, without representationalism	27
2.6. References	30
 Chapter 3. The Many-worlds View of Quantum Mechanics	33
Lev VAIDMAN	
 Chapter 4. Probability in Everett	53
Jeffrey A. BARRETT	
4.1. Introduction.	53
4.2. How Everett understood the measurement problem	55
4.3. Relative records and subjective experience	58
4.4. Everett’s account of probability	61
4.5. Strong adequacy and pure wave mechanics	65
4.6. Splitting worlds and self-location.	66
4.7. Two metaphysical options	68
4.8. Interacting worlds	72
4.9. Discussion	73
4.10. References.	74
 Chapter 5. Quantum Theory from a Pragmatist Perspective	79
Richard HEALEY	
5.1. A pragmatist perspective	79
5.2. How quantum theory implements the novel strategy	82
5.3. No measurement problem	86
5.4. No nonlocal action.	88
5.5. Application of quantum field models.	91
5.6. Wigner’s friend	93
5.7. Extending Wigner’s friend.	94
5.8. Four kinds of quantum relativism.	100
5.9. References	106

Chapter 6. The Role of the Observer: Convivial Solipsism. 109

Hervé ZWIRN

6.1. Current interpretations	109
6.1.1. Philosophical positions.	109
6.1.2. Realism	110
6.1.3. Idealism.	110
6.1.4. Instrumentalism and pragmatism.	111
6.1.5. Changes in formalism	111
6.1.6. The Copenhagen school	111
6.1.7. The dualist interpretation of von Neumann, Wigner, London and Bauer	112
6.1.8. Pragmatism.	113
6.1.9. Relational interpretation	113
6.1.10. QBism.	114
6.1.11. Everett's interpretation	115
6.2. Convivial Solipsism.	115
6.2.1. The hanging-on mechanism	117
6.2.2. Relativity yet conviviality	120
6.2.3. Empirical reality and phenomenal reality	123
6.2.4. The Einstein–Podolsky–Rosen paradox.	124
6.2.5. Is there really such a thing as non-locality?.	126
6.3. Conclusion	129
6.4. References	131

**Chapter 7. Copenhagenish Interpretations of
Quantum Mechanics 133**

David SCHMID, Yilè YING and Matthew S. LEIFER

7.1. Introduction.	134
7.2. Copenhagenish interpretations.	137
7.2.1. Four defining postulates	137
7.2.2. What Copenhagenish interpretations are not	147
7.2.3. Shifty splits	152
7.3. The measurement problem.	155
7.4. Wigner's friend	158
7.4.1. Wigner's enemy.	161
7.4.2. Wigner's stalkee and penpal	164
7.5. Conclusion	166
7.6. Acknowledgments.	167
7.7. References	167

Chapter 8. Dark Energy 171

Nathalie PALANQUE-DELABROUILLE

8.1. The expanding universe	171
8.2. First clues to the existence of dark energy.	173
8.3. What could the nature of dark energy be?	175
8.4. The standard model of cosmology	177
8.5. Observational approaches to deciphering dark energy	180
8.6. The origin of a standard ruler for measuring cosmic expansion	182
8.7. DESI and large-scale galaxy surveys.	184
8.8. A new turning point for dark energy?	186
8.9. Conclusion	190
8.10. References.	191

Chapter 9. Dark Matter 193

Françoise COMBES

9.1. A brief historical overview.	193
9.2. On a galaxy scale: rotation curves of spiral galaxies.	197
9.3. Scaling relationships for rotation curves.	198
9.4. Galaxies without dark matter: intriguing exceptions.	201
9.5. Dark matter on the scale of galaxy clusters	202
9.6. Cosmic shear and cluster collisions: revealing dark matter.	204
9.7. The cosmic microwave background: a measurement of unparalleled precision.	206
9.8. Dark matter solutions	208
9.9. Experiments for the direct detection of dark matter	211
9.10. Indirect detection of dark matter.	212
9.11. Modified gravity	213
9.12. Conclusion	216
9.13. References.	216

Chapter 10. Gravitational Waves 219

Matteo BARSUGLIA and Simone MASTROGIOVANNI

10.1. Introduction	219
10.2. Gravitational waves in the framework of the general relativity theory	220
10.3. Gravitational wave sources.	221
10.4. Gravitational wave detectors.	222

10.5. The first gravitational wave detection, GW150914.	225
10.6. GW170817 multimessenger observation.	226
10.7. The LIGO–Virgo–KAGRA observations	227
10.8. The astrophysical properties of compact binary coalescences	229
10.9. Cosmology with populations of gravitational waves	231
10.10 Tests of general relativity with a population of gravitational waves	232
10.11. Future detectors: Einstein Telescope, Cosmic Explorer and LISA	233
10.12. References	235

Chapter 11. What is the Energy of the Vacuum?. 239

Bruno MANSOULIÉ

11.1. Introduction	239
11.2. General relativity.	240
11.2.1. The foundations of GR and its successes	240
11.2.2. The cosmological constant.	242
11.3. A rapidly expanding universe	242
11.3.1. Vacuum energy interpretation.	243
11.4. Quantum field theory: the basics	244
11.4.1. Non-relativistic quantum theory: ground state	244
11.4.2. Relativistic quantum theory: the basics, the successes	244
11.4.3. Problems of quantum field theory: infinities, renormalization	245
11.3. Vacuum energy in a QFT	247
11.3.1. Naïve estimate	247
11.3.2. Toward a better estimate?	248
11.3.3. A few leads	249
11.3.4. Tracks in particle physics	252
11.3.5. General relativity tracks	253
11.4. Conclusion	254
11.5. References.	255

Chapter 12. Temporality in Relativistic Space–time 257

Marc LACHIÈZE-REY

12.1. Relativistic temporal effects	257
12.2. From time to space–time	258
12.2.1. Aspects of Newtonian time	258
12.2.2. Space–time	260

12.2.3. Histories and proper durations.	260
12.2.4. RTEs in space–time.	261
12.3. Time shifts	262
12.3.1. Spectral shifts	263
12.3.2. Kinematic shift.	264
12.3.3. Gravitational shifts	265
12.3.4. Pound and Rebka’s experiment	265
12.3.5. At the Tokyo Tower.	266
12.3.6. Astrophysical gravitational shifts	266
12.4. Time delays	267
12.4.1. Hafele–Keating experiment: shifts and delays	268
12.4.2. Shifts, delays and GPS	269
12.4.3. Close to a black hole	269
12.4.4. The Shapiro delay	270
12.5. What to do with time	271
12.5.1. Time and the speed of time	271
12.5.2. The speed of time	273
12.6. Conclusion	274

Chapter 13. A History of Thought Experiments in Quantum Gravity 275

Thiago HARTZ and Olival FREIRE JUNIOR

13.1. Introduction	275
13.2. Thoughts experiments before quantum theory	276
13.3. Thought experiments in quantum theory	278
13.4. Thought experiments turned real	280
13.5. Approaches to quantum gravity	281
13.6. Thought experiments in quantum gravity	284
13.6.1. Analogy between gravitation and electromagnetism	284
13.6.2. Proper order between formalism and measurement analysis.	285
13.6.3. The search for inconsistencies and contradictions	288
13.6.4. The experiment suggested by Belinfante and Feynman.	292
13.6.5. General relativity as a theory valid only for small fluctuations	293
13.7. Promises of experimental quantum gravity	295
13.8. Conclusions	296
13.9. Acknowledgements	297
13.10. References	297

Chapter 14. Possibility in Physics	303
Baptiste LE BIHAN, Emilia MARGONI and Annica VIESER	
14.1. Introduction	303
14.2. Classical mechanics	305
14.3. Kinematical and dynamical possibilities	308
14.4. General relativity	311
14.5. Nonrelativistic quantum mechanics	315
14.6. Concluding remarks	319
14.7. Acknowledgments	321
14.8. References	321
 List of Authors	 323
