Preface ix

Introduction xiii

Chapter 1. Oral and Written Interaction Corpora 1

1.1. Oral H–H corpora: call centers and satisfaction surveys 2
  1.1.1. CallSurf and Vox Factory: call center corpora 2
  1.1.2. Satisfaction surveys: the NPS07-09 corpus 4
1.2. Written H–H corpora: forums 6
  1.2.1. Forum data: the WebGRC corpus 6
  1.2.2. External opinion analysis corpora used as points of reference 7
1.3. Oral H–A corpora: virtual assistants and robots 8
  1.3.1. The Semaine corpus: toward a H–A interaction scenario 8
  1.3.2. The WoZ H–A negotiation corpus 9
  1.3.3. The UE-HRI human–robot corpus 10
1.4. Written H–A corpus: chatbot 15
1.5. Comparative study of different corpora 17
  1.5.1. Company corpora versus academic corpora in an H–H context 17
  1.5.2. H–A corpora 18
1.6. Conclusion 20

Chapter 2. Analyzing User Opinions in Human–human Interactions 21

2.1. From linguistic modeling to machine learning 22
  2.1.1. Rule-based system and machine learning 23
  2.1.2. Opinion-specific strings and categorization 26
  2.1.3. Extracting strings of words linking topics and opinions . . . 29
2.2. Learning to account for linguistic specificities 34
  2.2.1. Specific characteristics of written conversation: forums . . . 35
  2.2.2. Specific features of conversational speech 37
2.3. Conclusion 39

Chapter 3. Analyzing User Opinions in Human–Agent Interactions 41

3.1. Choice of phenomena to study in relation to applications 44
  3.1.1. Modeling user likes and dislikes 44
  3.1.2. Characterizing phenomena for problem interactions 45
3.2. Rule-based system to take into account interaction 46
  3.2.1. Methodology: corpus analysis 46
  3.2.2. Analyzing user utterances 51
  3.2.3. Taking account of the dialogical context 55
  3.2.4. Taking account of the thematic structure of interactions . . . 57
3.3. Hybrid approach for taking account of interactions 57
  3.3.1. Extraction of linguistic characteristics 58
  3.3.2. HCRF models 59
3.4. Evaluation for human–agent interactions 62
  3.4.1. Annotation for system evaluation 63
  3.4.2. Evaluation of different analysis levels 69
3.5. Conclusion 72

Chapter 4. Socio-emotional Interaction Strategies: the Case of Alignment 75

4.1. Theoretical models 77
  4.1.1. Selected socio-emotional behaviors 77
  4.1.2. Theoretical bases for conversational analysis 77
4.2. Qualitative and quantitative corpus analysis 78
  4.2.1. Analyzing the communicative functions of HR 78
  4.2.2. Measurement and quantification of verbal alignment 78

4.3. Computational model of verbal alignment 80
4.3.1. Planning the emotional stance of the agent 81
4.3.2. Other-repetition module 82
4.4. Method for evaluating an alignment module 83
4.4.1. Post-interaction questionnaire 84
4.4.2. Qualitative analysis of recordings 85
4.5. Conclusion 86

Chapter 5. Generating Socio-emotional Behaviors 87

5.1. Generating agent prosody 87
5.1.1. Methodological choices 88
5.1.2. Intonation, dialog acts and social attitudes 89
5.2. Intonation, facial expressions and sequence mining 92
5.2.1. Automatic extraction of characteristics and symbolization 93
5.2.2. Parameters for signal temporality 95
5.2.3. Initial results 95
5.3. Generation of coverbal gestures for agents 96
5.3.1. Methodological choices 97
5.3.2. Image schemas: from text to gesture 98
5.3.3. Analysis of verbal content 99
5.3.4. Analysis of prosodic content 100
5.3.5. Illustration 101
5.4. Conclusion 101

Conclusion 103
