<b>Preface . . . . .</b>	ix
<b>Part 1. Basic Mathematical Concepts . . . . .</b>	1
<b>Chapter 1. Basic Reminders of Probability . . . . .</b>	3
1.1. Chance . . . . .	3
1.2. Counting and probability . . . . .	4
1.3. Events and probability. . . . .	11
1.4. Statistics and probability . . . . .	16
1.5. Compound probability. . . . .	17
1.6. Graphs, states, transitions . . . . .	20
<b>Chapter 2. Probabilistic Models . . . . .</b>	25
2.1. Random variables . . . . .	25
2.2. Mean, variance, standard deviation . . . . .	29
2.3. Some common distributions . . . . .	30
2.3.1. Bernoulli distribution . . . . .	30
2.3.2. Poisson distribution . . . . .	31
2.3.3. Normal distribution . . . . .	33
2.4. Stochastic processes . . . . .	37
2.5. Appendix . . . . .	40
2.5.1. Calculation of the mean $E(X)$ of the binomial distribution . . . . .	40
2.5.2. Calculation of the variance $v(X)$ of the binomial distribution. . . . .	40
2.5.3. Calculation of the mean $E(X)$ of the Poisson distribution . . . . .	41
2.5.4. Calculation of the variance $v(X)$ of the Poisson distribution . . . . .	41
2.5.5. Calculation of the mean $E(X)$ for the normal distribution. . . . .	42
2.5.6. Calculation of the variance $v(X)$ for the normal distribution . . . . .	43

<b>Chapter 3. Inventory Management</b>	45
3.1. General . . . . .	45
3.2. Introductory example . . . . .	47
3.3. Wilson's model: assumptions 3.1 . . . . .	49
3.4. Wilson's model: assumptions 3.2 . . . . .	51
3.5. Probabilistic Wilson's model: assumptions 3.3 . . . . .	54
3.6. Safety and quality . . . . .	59
3.6.1. Delivery time . . . . .	59
3.6.2. Minimum stock . . . . .	59
3.6.3. Safety stock . . . . .	60
3.6.4. Danger level . . . . .	61
3.6.5. Quality of service . . . . .	61
3.7. Appendix . . . . .	65
<b>Part 2. Stochastic Processes</b>	69
<b>Chapter 4. Markov Chains</b>	71
4.1. Markov chain concepts . . . . .	71
4.2. Concepts in graphs . . . . .	79
4.3. Ergodicity . . . . .	83
4.4. Random paths . . . . .	88
<b>Chapter 5. Markov Processes</b>	95
5.1. The concept of Markov processes . . . . .	95
5.2. Poisson process . . . . .	98
5.3. Poisson distribution and exponential distribution . . . . .	103
5.4. Birth process and death process . . . . .	106
5.5. Combination of the two processes, birth and death . . . . .	108
<b>Chapter 6. Queueing Systems</b>	113
6.1. Introduction . . . . .	113
6.2. M/M/1 queue with 1 station . . . . .	116
6.3. M/M/S queue with S stations . . . . .	120
6.4. Appendix: calculations for M/M/S . . . . .	126
6.4.1. Calculation of $P_0$ . . . . .	126
6.4.2. Calculation of $n_s$ . . . . .	127
6.4.3. Calculation of $n_f$ . . . . .	128
6.4.4. Calculation of $t_s$ and $t_f$ . . . . .	129
6.4.5. Calculation of $n_i$ . . . . .	129

---

<b>Chapter 7. Various Applications . . . . .</b>	131
7.1. Reliability and availability of equipment . . . . .	131
7.1.1. Reliability and instantaneous failure rate . . . . .	131
7.1.2. Some probability distributions . . . . .	135
7.1.3. Non-repairable systems . . . . .	136
7.1.4. Repairable systems . . . . .	140
7.2. Applications in genetics . . . . .	144
7.2.1. Mendel's laws . . . . .	144
7.2.2. Heredity and genetic evolution . . . . .	148
7.3. Population dynamics, predator–prey model . . . . .	154
7.3.1. Deterministic model . . . . .	155
7.3.2. Solution near the equilibrium . . . . .	160
7.3.3. External influence . . . . .	160
7.3.4. Stochastic models . . . . .	161
7.4. From physics to finance: Brownian motion . . . . .	163
7.4.1. Brownian motion in physics . . . . .	163
7.4.2. Standard model of Brownian motion . . . . .	165
7.4.3. Brownian motion with drift . . . . .	168
7.4.4. Black–Scholes model . . . . .	169
7.5. Appendix . . . . .	173
7.5.1. Solution to the predator–prey problem near the equilibrium . . . . .	173
7.5.2. Root mean square path and diffusion equation . . . . .	176
7.5.3. Expression of the Black–Scholes formula . . . . .	179
<b>Part 3. Simulation . . . . .</b>	181
<b>Chapter 8. Generator Programs . . . . .</b>	183
8.1. Random and pseudo-random numbers . . . . .	183
8.2. Algorithms for the uniform distribution . . . . .	184
8.2.1. Middle-square algorithm . . . . .	184
8.2.2. Fibonacci sequence . . . . .	186
8.2.3. Congruences . . . . .	187
8.2.4. Lehmer process . . . . .	188
8.2.5. Decimals of $\Pi$ . . . . .	189
8.3. Distribution function and random number generator . . . . .	189
8.4. Generators for the normal distributions . . . . .	191
8.4.1. Uniform distribution . . . . .	191
8.4.2. Poisson distribution . . . . .	192
8.4.3. Normal distribution . . . . .	193
8.4.4. Exponential distribution . . . . .	194
8.5. Generators for any law . . . . .	194
8.6. $\chi^2$ test . . . . .	196

---

<b>Chapter 9. Principles of Simulation</b>	203
9.1. General information on simulation . . . . .	203
9.2. Simulation by example . . . . .	208
9.3. Simulation according to a law of probability . . . . .	218
9.4. Mathematical foundations. . . . .	224
9.4.1. Bienaym��-Chebyshev inequality . . . . .	225
9.4.2. Weak law of large numbers . . . . .	226
9.4.3. Strong law of large numbers . . . . .	229
9.4.4. Central limit theorem . . . . .	230
<b>Chapter 10. Simulation of Inventory Management</b>	233
10.1. General provisions . . . . .	233
10.2. Comparison of two inventory management policies . . . . .	236
10.3. Comparison of various stock policies. . . . .	241
<b>Chapter 11. Simulation of a Queueing Process</b>	245
11.1. General provisions . . . . .	245
11.2. Simulation of an M/M/1 queue . . . . .	246
11.3. Simulation of an M/M/S queue . . . . .	249
11.3.1. Calculation of arrival dates and service time for each element . . . . .	250
11.3.2. Iteration by successive dates of operations . . . . .	251
11.3.3. Synthetic results . . . . .	254
<b>Chapter 12. Optimization and Simulation</b>	257
12.1. Introduction . . . . .	257
12.2. Local methods . . . . .	262
12.2.1. Greedy algorithm . . . . .	264
12.2.2. Method of gradient descent. . . . .	264
12.2.3. Simulated annealing. . . . .	266
12.2.4. Tabu search . . . . .	268
12.3. Genetic algorithms . . . . .	268
12.4. Ant colonies. . . . .	276
