Foreword	ix
Acknowledgments	xi
Introduction	xv
Part 1. Food and Sustainable Development Challenges	1
Chapter 1. Food: Issues and Challenges	3
1.1. History and roles of food	3
1.2. Environmental impacts related to food.	7
1.3. Food systems.	8
1.3.1. The emergence of food systems	9
1.3.2. Characterization of food systems	11
1.3.3. Historical evolution of food systems: models and functions	12
1.4. Evolution of food: disruptions in the practices and symbolism of foodstuffs.	19
1.4.1. Disruptions in agricultural production modes	20
1.4.2. Disruptions in the way companies are organized.	22
1.4.3. Disruptions in the ways in which space is occupied and developed.	24
1.4.4. Disruptions in distribution systems	25
1.4.5. Disruptions in consumption patterns	27
1.4.6. Disruption in food values.	28
1.5. Contribution of food systems to food supply	31
1.5.1. An intensive, specialized and concentrated agro-industrial system	31
1.5.2. A globalized agro-industrial food system.	32

1.6. Trends, challenges and scenarios for a sustainable global food system	34
1.6.1. Three trends and challenges	34
1.6.2. Three scenarios or tools to explore the possible future of the global food system	35
1.7 Conclusion	38
Chapter 2. The Ecological Transition for Sustainable Food	41
2.1. Food and ecological transition	41
2.2. Ecological transition and corporate social responsibility	45
2.2.1. The different strategies observed	47
2.2.2. The origin of stakeholders and corporate social responsibility	47
2.3. Taking environmental issues into account	57
2.3.1. Taking environmental performance into account in product design	60
2.3.2. Qualitative or semi-qualitative environmental assessment tools and methods.	62
2.3.3. Quantitative and monocriteria environmental assessment tools and methods.	65
2.3.4. Quantitative and multi-criteria environmental assessment tools and methods: lifecycle assessment (LCA)	66
2.4. Taking nutritional issues into account	70
2.4.1. The framework for action	70
2.4.2. Tools and indicators for nutritional profiling of foodstuffs	72
2.5. Consideration of economic and social issues	74
2.5.1. Principle	74
2.5.2. Illustration of a Canadian dairy industry	75
2.6. Implementation of an ecodesign approach.	76
2.7. Ecodesign practices for food chains	79
2.7.1. The principles of transforming business practices through standards	80
2.7.2. Management system standards: tools for managing sustainable development.	82
2.7.3. The role of standards in fostering innovations related to sustainable development	89
2.7.4. Consumer behavior	91
2.7.5. Agricultural practices.	93
2.7.6. More sustainable agri-food business practices	94
2.8. Conclusion	98

Part 2. Implementation of Ecodesign Practices in Food Innovation Projects	101
Chapter 3. Ecodesign of Food: The Cases of ÉcoTrophélie Projects	103
3.1. The ecological transition, a driver of innovation	103
3.2. Ecoinnovating by taking into account ecodesign practices.	104
3.3. Know-how resulting from the ÉcoTrophélie competition	107
3.4. Framework for the analysis of ÉcoTrophélie projects	108
3.5. ÉcoTrophélie projects	113
3.5.1. VitaPlus: a range of dishes for pleasure, health and vitality for the elderly	115
3.5.2. Mixi'Mousse: rice-based mixes and mousses for hospitalized people suffering from dysphagia	122
3.5.3. Minigloo: a nutritious frozen dessert for children aged 1 to 3	129
3.5.4. Vertu: biscuits with plant extracts and essential oils to support quitting smoking	137
3.5.5. <i>Lardons de la mer</i> : high-quality fish offcuts used as bacon meat.	145
3.5.6. PannIno: ecodesigned gnocchi with bakery by-products in three flavors	154
3.5.7. <i>Prêt Par Moi</i> : traditional creamy mixes, culinary aids for the preparation of hot dishes	163
3.5.8. Devatâ: a Cambodian lemongrass liqueur	172
3.5.9. <i>Kokinéo des Incrépides</i> : the balanced, tasty and complete crispy seafood, accessible to all budgets	180
3.5.10. So Sea'S: a vegetarian sausage available in snack form	189
3.5.11. Ici&Là: a vegetable burger made from lentils and other vegetables	196
3.6. Analysis of ÉcoTrophélie projects	202
3.6.1. Food ecodesign: an innovative design process that goes beyond new products	202
3.6.2. Detection of opportunities	204
3.6.3. Selection of the business model and product architecture	205
3.6.4. Determination of the innovation frontier	206
3.6.5. Learning and arbitration of ecodesign practices	207
3.6.6. Creating sustainable value	209
3.7. Conclusion	213

Chapter 4. Feedback for Ecodesign and Ecoinnovation	217
4.1. Feedback on the ÉcoTrophélie cases: definition of the ecodesign project phases	217
4.1.1. Entry point: a strong individual commitment.	218
4.1.2. Creativity: ideation and conceptualization	218
4.1.3. Market analysis: definition of strategic positioning	219
4.1.4. Knowledge creation: the use of experimentation, experts and partners	221
4.1.5. Product development: taking sustainability into account	222
4.1.6. Communicating sustainability: towards new distribution systems	222
4.1.7. Towards the construction of sustainable business models.	223
4.1.8. Overview	224
4.2. Resilience in the development of ecoinnovation within the framework of student projects	224
4.2.1. The importance of the starting point for innovation	227
4.2.2. New knowledge, new tools, complex decision-making and consistent choices	227
4.2.3. Overview	228
4.3. Transfer of experience to training and the company	229
4.3.1. Educational contributions	229
4.3.2. Managerial contributions.	233
4.3.3. Overview	240
4.4. Conclusion	241
Conclusion	243
