Preface	xxi
Abhishek KUMAR, Priya BATTa, Sachin AHUJA and Pramod Singh RATHORE	
Chapter 1. Transforming Post-Operative Rehabilitation: AI-integrated Physiotherapy in Orthopedics and Oncology	1
Radhika CHINTAMANI, G. VARADHARAJULU and G. HIMASHREE	
1.1. Introduction	2
1.1.1. Definition	2
1.1.2. Important characteristics of implant biomechanics	2
1.1.3. Implant biomechanics is crucial for physiotherapy	3
1.2. Internal and external fixators	3
1.2.1. Principle of fixation.	4
1.2.2. Physiotherapy for internal fixators	4
1.2.3. Physiotherapy for external fixator.	7
1.3. Artificial intelligence in post-operative rehabilitation	9
1.3.1. Machine learning algorithms.	10
1.3.2. Deep learning algorithms.	11
1.3.3. Computer vision algorithms	12
1.3.4. Natural language processing (NLP) algorithms	13
1.3.5. Predictive analytics algorithms	14
1.4. Conclusion	14
1.5. References	15

Chapter 2. AI-enhanced Virtual Rehabilitation: The Future of Cancer Recovery	19
Omkar SOMADE, Rashmi GUDUR, Nitin K. CHAUDHARY and Mahendra ALATE	
2.1. Introduction	20
2.2. Background and need for AI in cancer rehabilitation.	20
2.2.1. The burden of cancer-related impairments	20
2.2.2. Limitations of traditional rehabilitation	21
2.2.3. Emergence of virtual rehabilitation	22
2.3. AI technologies in virtual rehabilitation	22
2.3.1. ML and personalization	22
2.3.2. Computer vision for motion tracking	23
2.3.3. NLP for communication	23
2.3.4. Integration with wearable devices	24
2.4. Current applications and case studies	24
2.4.1. OncoRehab: AI-driven home therapy	24
2.4.2. Chatbot support systems	24
2.4.3. Virtual coaches in cognitive rehabilitation	25
2.4.4. Wearable-integrated rehabilitation platforms.	25
2.5. Clinical effectiveness and outcomes	25
2.6. Ethical, legal and technical challenges.	26
2.6.1. Data privacy and security	26
2.6.2. Algorithmic bias	26
2.6.3. Technology access and digital literacy	27
2.6.4. Clinician integration and trust	27
2.7. Future directions.	27
2.7.1. Hybrid rehabilitation models.	27
2.7.2. AI-powered multimodal platforms	28
2.7.3. Emotionally intelligent AI	28
2.7.4. Policy and reimbursement reforms	28
2.8. Conclusion	29
2.9. References	29
Chapter 3. Predictive Analytics in Physiotherapy and Oncology: Optimizing Treatment Plans	33
S. ANANDH, Suresh J. BHOSALE and Vivek PARHATE	
3.1. Introduction	33
3.2. Background and rationale.	35
3.2.1. Overview of predictive analytics	35
3.2.2. Relevance in healthcare	36
3.2.3. Importance in physiotherapy and oncology.	36

3.3. Predictive analytics in physiotherapy	37
3.3.1. Application areas	37
3.3.2. Case studies	38
3.3.3. Technologies used	39
3.3.4. Benefits	40
3.4. Predictive analytics in oncology	41
3.4.1. Application areas	41
3.4.2. Case studies	41
3.4.3. Technologies used	41
3.4.4. Benefits	41
3.5. Methodological framework	41
3.5.1. Data sources	41
3.5.2. Data preprocessing	42
3.5.3. Model development	42
3.5.4. Implementation in clinical settings	42
3.6. Challenges and limitations	42
3.6.1. Data quality and standardization	42
3.6.2. Model interpretability	43
3.6.3. Ethical and legal considerations	43
3.6.4. Integration with clinical workflow	43
3.7. Ethical and regulatory considerations	44
3.7.1. Patient consent and data privacy	44
3.7.2. Algorithmic fairness	44
3.7.3. Compliance with regulations	44
3.8. Future directions	44
3.8.1. Federated learning to enable multi-institutional model training without data sharing	44
3.8.2. Integration with digital twins for real-time simulation of treatment outcomes	44
3.8.3. Expansion into preventive physiotherapy and early cancer screening	45
3.8.4. Enhanced interpretability through explainable AI tools	45
3.9. Conclusion	45
3.10. References	46
Chapter 4. Integrating AI with Physiotherapy to Improve Quality of Life for Cancer Patients	49
Namrata KADAM, Rashmi GUDUR and Vivek DESHPANDE	
4.1. Introduction	50
4.1.1. Background	50
4.1.2. Rationale for AI integration	50
4.1.3. Objectives	51

4.2. Role of physiotherapy in cancer care.	51
4.2.1. Importance of physiotherapy.	51
4.2.2. Types of physiotherapeutic interventions.	52
4.2.3. Challenges in conventional physiotherapy	52
4.3. AI technologies in healthcare.	53
4.3.1. ML and deep learning	53
4.3.2. Natural language processing	54
4.3.3. Computer vision.	54
4.3.4. Robotics and wearable devices	55
4.4. Integrating AI into physiotherapy for cancer patients	56
4.4.1. Personalized treatment planning.	56
4.4.2. Real-time monitoring and feedback	56
4.4.3. Predictive analytics	57
4.4.4. Remote rehabilitation.	57
4.5. Case studies and applications.	58
4.5.1. AI-powered rehabilitation	58
4.5.2. Robotics in cancer rehabilitation	58
4.5.3. Wearable technology	58
4.6. Benefits of AI-enhanced physiotherapy	59
4.6.1. Improved personalization	59
4.6.2. Enhanced engagement and adherence.	60
4.6.3. Better outcomes.	60
4.6.4. Resource optimization	60
4.7. Ethical and technical challenges	61
4.7.1. Data privacy and security	61
4.7.2. Algorithm bias and transparency	61
4.7.3. Clinical validation	61
4.7.4. Integration with existing systems	61
4.8. Proposed framework for AI-integrated physiotherapy	61
4.8.1. Data collection	61
4.8.2. Data analysis	61
4.8.3. Treatment recommendation	61
4.8.4. Continuous monitoring	62
4.8.5. Outcome evaluation.	62
4.9. Future directions.	62
4.9.1. Advancements in AI	62
4.9.2. Multidisciplinary collaboration	62
4.9.3. Patient education and involvement	62
4.9.4. Policy and regulation	62
4.10. Conclusion	62
4.11. References	63

Chapter 5. AI-driven Imaging in Oncology and Physiotherapy: A Game-changer in Diagnostics	67
S. ANANDH, Anand GUDUR and Manoj VAIRALKAR	
5.1. Introduction	68
5.2. The role of medical imaging in oncology and physiotherapy	70
5.2.1. Imaging in oncology	70
5.2.2. Imaging in physiotherapy	70
5.3. AI technologies in medical imaging	71
5.3.1. CNNs.	71
5.3.2. Natural language processing.	71
5.3.3. Generative adversarial networks.	72
5.3.4. Reinforcement learning and transfer learning	73
5.4. AI-driven imaging in oncology: applications and benefits.	73
5.4.1. Early detection and diagnosis	73
5.4.2. Tumor segmentation and classification	73
5.4.3. Monitoring treatment response: quantitative imaging for real-time evaluation	73
5.4.4. Predictive modeling: forecasting recurrence, progression and survival.	74
5.5. AI in physiotherapy imaging: a revolution in functional assessment	76
5.5.1. Real-time biomechanical analysis.	76
5.5.2. Musculoskeletal imaging interpretation.	76
5.5.3. Personalized rehabilitation	76
5.5.4. Remote assessment and telerehabilitation	76
5.5.5. Fall risk and postural analysis	76
5.6. Limitations, challenges and ethical considerations in implementing AI-driven imaging in clinical practice	76
5.6.1. Data scarcity, quality issues and bias in training AI models	76
5.6.2. Lack of transparency in AI decision-making and the “black box” problem.	77
5.6.3. Ethical and legal implications of AI use in medical imaging	77
5.6.4. Regulatory challenges and the need for standardization.	77
5.6.5. Integration with hospital systems and clinician resistance to AI adoption	77
5.7. Future directions and innovations in AI imaging for oncology and physiotherapy	77
5.7.1. Developing multimodal AI models combining imaging, genomic and clinical data	77
5.7.2. Federated learning and edge computing for decentralized and secure AI training	78
5.7.3. Integration of AI with robotics and smart rehabilitation technologies	78

5.7.4. AI-enabled portable imaging devices for low-resource settings and remote care	79
5.7.5. Continuous learning systems and AI evolution through real-world imaging feedback	79
5.8. Conclusion	79
5.9. References	80

Chapter 6. AI-driven Innovations in Biomaterial-based Physiotherapy and Oncology: Personalizing Patient Care Through Intelligent Monitoring and Predictive Rehabilitation 85

G. HIMASHREE, G. VARADHARAJULU and Radhika CHINTAMANI

6.1. Interactions with blood and proteins	86
6.2. Wound healing response after biomaterial implantation	86
6.3. Effect of tissue biomaterial interaction on physiotherapy	87
6.4. Metallic corruptions	89
6.5. Effect of corrosion on physiotherapy regimen	90
6.6. Biomaterial degradation and resorption	91
6.7. Artificial intelligence in detecting biodegradation and absorption	92
6.7.1. Sensor data and wearable devices	92
6.7.2. Medical imaging analysis	92
6.7.3. Biomarker detection	93
6.7.4. Predictive modeling and ML.	93
6.7.5. Continuous monitoring and real-time alerts	94
6.7.6. Data integration and multi-modal analysis	94
6.7.7. Patient-specific customization	94
6.8. Effect of biomaterial degradation and resorption on physiotherapy	95
6.8.1. Changes in mechanical stability	95
6.8.2. Tissue response to degradation	95
6.8.3. Loss of load-bearing capacity	95
6.8.4. Impact on range of motion and muscle strength	96
6.8.5. Individualized therapy plans	96
6.8.6. Preventing re-injury.	96
6.9. AI aiding physiotherapist to diagnose the degradation during intervention	97
6.9.1. Data collection	97
6.9.2. Data integration	97
6.9.3. Data analysis (biomechanical monitoring)	98
6.9.4. Early detection of degradation (predictive modeling)	98
6.9.5. Biological data analysis	98
6.9.6. Motion analysis (computer vision)	98
6.9.7. Continuous monitoring and reporting	99
6.9.8. Adaptive intervention (personalized treatment plan)	99
6.9.9. Decision support for physiotherapist	99

6.9.10. Feedback loop and continuous learning	99
6.10. Conclusion	100
6.11. References	100

Chapter 7. Telemedicine and AI in Physiotherapy and Oncology: Bridging Gaps in Care 105

Ankita DURGAWALE, Anand GUDUR and Vivek DESHPANDE

7.1. Introduction	105
7.2. The role of telemedicine in oncology and physiotherapy	107
7.2.1. Definition and scope	107
7.2.2. Benefits of telemedicine	107
7.2.3. Applications in oncology.	107
7.2.4. Applications in physiotherapy	108
7.3. AI in oncology and physiotherapy: enhancing care delivery.	108
7.3.1. Overview of AI in healthcare	108
7.3.2. AI applications in oncology	108
7.3.3. AI applications in physiotherapy	108
7.3.4. Integration with telemedicine	109
7.4. Case studies and implementation models	109
7.4.1. Remote oncology monitoring: case study from Canada	109
7.4.2. AI-powered telerehabilitation in stroke survivors	109
7.4.3. Hybrid model: India's remote cancer rehab initiative	110
7.5. Benefits of integrating AI and telemedicine in oncology and physiotherapy	110
7.5.1. Improved access and equity	110
7.5.2. Enhanced diagnostic accuracy	111
7.5.3. Personalized care	111
7.5.4. Continuous monitoring and feedback	112
7.5.5. Cost efficiency	112
7.6. Challenges and barriers	113
7.6.1. Technological limitations	113
7.6.2. Data privacy and security	114
7.6.3. Regulatory and legal issues	114
7.6.4. Clinical acceptance	115
7.6.5. Patient engagement	115
7.7. Future directions and innovations	116
7.7.1. AI-driven digital twins	116
7.7.2. Augmented reality and virtual reality	116
7.7.3. Federated learning in AI models.	117
7.7.4. Remote robotic-assisted physiotherapy	117
7.7.5. Policy and education reforms	117
7.8. Conclusion	118
7.9. References	119

Chapter 8. Personalized AI-based Exercise Therapy for Oncology and Physiotherapy Patients.	123
Ankita DURGAWALE, Rashmi GUDUR and Vivek DESHPANDE	
8.1. Introduction	124
8.2. Background.	124
8.2.1. Oncology and physiotherapy: the need for personalization	125
8.2.2. Limitations of traditional exercise therapy	125
8.3. Technological framework.	126
8.3.1. Key AI technologies	127
8.3.2. Data inputs for personalization	128
8.3.3. Hardware ecosystem	129
8.4. Application in oncology.	130
8.4.1. CRF and AI exercise solutions.	130
8.4.2. Post-surgical rehabilitation.	131
8.4.3. Immune system monitoring	132
8.5. Application in physiotherapy.	132
8.5.1. MSK disorders	133
8.5.2. Neurological conditions	133
8.5.3. Pain management	134
8.6. Clinical implementation.	135
8.6.1. Integration into healthcare systems	135
8.6.2. Remote monitoring and telerehabilitation	136
8.6.3. Case studies and trials	137
8.7. Benefits and outcomes	137
8.7.1. Improved personalization	137
8.7.2. Enhanced engagement and adherence.	138
8.7.3. Real-time feedback and safety.	138
8.7.4. Scalability and accessibility	138
8.8. Challenges and limitations	138
8.8.1. Data privacy and security	138
8.8.2. Bias in AI models.	138
8.8.3. Technical limitations	138
8.8.4. Ethical considerations	139
8.9. Future directions.	139
8.9.1. Integrating genomics and AI.	139
8.9.2. Multi-modal AI systems	139
8.9.3. AI-coach hybrid models	139
8.9.4. AI in pediatric and geriatric oncology.	139
8.10. Conclusion	139
8.11. References	140

Chapter 9. Neural Networks in Physiotherapy and Oncology: Enhancing Recovery Pathways	145
Chandrakant PATIL, Dhiraj Kumar MANE, Anand GUDUR and Kalpana MALPE	
9.1. Introduction	146
9.1.1. Background	146
9.1.2. Significance of neural networks in healthcare	147
9.1.3. Objective.	148
9.2. Neural networks: concepts and healthcare integration	148
9.2.1. Basics of neural networks	148
9.2.2. Types of neural networks in healthcare	148
9.2.3. Integration with healthcare systems	149
9.3. Neural networks in oncology	149
9.3.1. Early detection and diagnosis	149
9.3.2. Tumor classification and staging	149
9.3.3. Treatment personalization	150
9.3.4. Prognostic modeling	150
9.4. Neural networks in physiotherapy	151
9.4.1. Automated movement analysis	151
9.4.2. Personalized rehabilitation programs	151
9.4.3. Predictive recovery modeling	151
9.4.4. Telerehabilitation and virtual coaching	152
9.5. Cross-disciplinary applications	152
9.5.1. Oncology rehabilitation	152
9.5.2. Pain management	153
9.5.3. Cognitive rehabilitation	153
9.6. Challenges and limitations	154
9.6.1. Data privacy and ethics.	154
9.6.2. Data quality and bias	154
9.6.3. Interpretability.	155
9.6.4. Integration with clinical workflows	155
9.7. Future prospects	156
9.7.1. Explainable AI (XAI).	156
9.7.2. Federated learning	156
9.7.3. Hybrid models.	156
9.7.4. Integration with robotics	157
9.7.5. Multimodal data fusion.	157
9.8. Conclusion	157
9.9. References	158

Chapter 10. AI-enabled Chatbots and Virtual Assistants in Oncology and Physiotherapy	161
Namrata KADAM, Rashmi GUDUR, Dhiraj Kumar MANE and Vivek DESHPANDE	
10.1. Introduction	162
10.1.1. Background	162
10.1.2. Definitions and scope	162
10.1.3. Objectives	162
10.2. Technological foundation	163
10.2.1. Natural language processing (NLP)	163
10.2.2. Machine learning and knowledge bases	163
10.2.3. Integration with EHRs and mHealth devices	164
10.3. Applications in oncology	164
10.3.1. Patient education and decision support	164
10.3.2. Symptom monitoring and reporting	165
10.3.3. Mental health and psychosocial support	165
10.3.4. Clinical trial navigation	166
10.4. Applications in physiotherapy	167
10.4.1. Remote exercise supervision	167
10.4.2. Post-surgical rehabilitation	167
10.4.3. Patient motivation and adherence	168
10.4.4. Appointment scheduling and communication	168
10.5. Case studies	169
10.5.1. Wysa for oncology mental health	169
10.5.2. Replika for cancer survivors	169
10.5.3. Ada Health in early cancer symptom checking	170
10.6. Benefits and impact	170
10.6.1. Increased accessibility	170
10.6.2. 24/7 availability	171
10.6.3. Personalized care	171
10.6.4. Resource optimization	171
10.6.5. Enhanced patient engagement and education	171
10.6.6. Data-driven insights for continuous improvement	172
10.6.7. Psychological support and companionship	172
10.7. Limitations and challenges	172
10.7.1. Data privacy and security	172
10.7.2. Accuracy and reliability	173
10.7.3. Ethical concerns	173
10.7.4. Technological barriers	173
10.7.5. Integration with clinical workflows	174
10.7.6. Legal and regulatory hurdles	174
10.8. Future directions	174
10.8.1. Multimodal interactions	174

10.8.2. Advanced emotional intelligence	174
10.8.3. Integration with AI imaging and diagnostics	175
10.8.4. Regulation and certification	175
10.9. Conclusion	175
10.10. References	176

Chapter 11. AI-driven Sensor Technologies in Physiotherapy and Oncology: Transforming Rehabilitation Through Intelligent Biomechanical Monitoring 179

G. VARADHARAJULU, Radhika CHINTAMANI and G. HIMASHREE

11.1. Introduction	180
11.1.1. Sensor classification	180
11.1.2. Sensor packaging	181
11.2. Sensors for monitoring human motion	181
11.2.1. Traditional silicon-based sensors	182
11.2.2. Flexible sensors	186
11.3. Biophysical measurements in physiotherapy	188
11.3.1. Force measurement	189
11.3.2. Pressure measurement	196
11.3.3. Motion measurement	202
11.4. Conclusion	217
11.5. References	218

Chapter 12. Big Data and AI in Physiotherapy and Cancer Treatment: From Research to Practice 225

Chandrakant PATIL, Dhiraj Kumar MANE,

Anand GUDUR and Kalpana MALPE

12.1. Introduction	226
12.2. Big Data and AI: definitions and scope	228
12.2.1. What is Big Data?	228
12.2.2. What is AI in healthcare?	228
12.3. Big Data and AI in oncology	229
12.3.1. Precision oncology	229
12.3.2. Early detection and diagnosis	229
12.3.3. Prognostic modeling and risk stratification	230
12.4. Big Data and AI in physiotherapy	231
12.4.1. Movement analysis and assessment	231
12.4.2. Personalized rehabilitation programs	232
12.4.3. Remote monitoring and telerehabilitation	232
12.5. Integration in cancer care: combined oncology and physiotherapy applications	233

12.5.1. Multimodal data fusion	233
12.5.2. Survivorship and quality of life	233
12.5.3. AI-driven decision support systems	234
12.6. Translational pathways: from research to practice	234
12.6.1. Academic research and clinical trials	234
12.6.2. Clinical implementation.	234
12.6.3. Regulatory and ethical considerations	234
12.7. Case studies.	234
12.7.1. IBM Watson for oncology	234
12.7.2. AI-powered rehabilitation platforms	234
12.7.3. Predictive analytics in breast cancer recovery	235
12.8. Challenges and limitations.	235
12.8.1. Data quality and standardization	235
12.8.2. Algorithm bias and equity	235
12.8.3. Clinician and patient acceptance	235
12.9. Future directions	235
12.9.1. Integration of multi-omics data.	236
12.9.2. AI-driven adaptive interventions.	236
12.9.3. Cross-disciplinary collaboration	237
12.9.4. Real-world evidence and longitudinal studies.	237
12.10. Conclusion.	238
12.11. References.	238
Chapter 13. Emerging AI Technologies Shaping the Future of Cancer Care	241
Omkar SOMADE, Rashmi GUDUR, Nitin K. CHAUDHARY and Mahendra ALATE	
13.1. Introduction.	241
13.2. AI in early detection and diagnosis	242
13.2.1. Imaging-based diagnostics	243
13.2.2. Pathology and histology	244
13.2.3. AI-powered histopathology.	244
13.2.4. Case study: Lunit INSIGHT	244
13.3. AI in genomics and precision medicine	245
13.3.1. AI-driven genomic analysis.	245
13.3.2. Applications of AI in genomic oncology	245
13.3.3. Personalized medicine	245
13.3.4. AI-powered therapeutic decision support	246
13.3.5. Integration with electronic health records	246
13.4. AI in treatment planning and optimization.	246
13.4.1. Radiotherapy.	246
13.4.2. AI-enhanced treatment planning	247
13.4.3. Auto-segmentation	247

13.4.4. Chemotherapy and immunotherapy optimization.	247
13.4.5. AI in chemotherapy planning.	248
13.4.6. AI in immunotherapy	248
13.4.7. Biomarker prediction and patient stratification	248
13.5. AI in drug discovery and development	249
13.5.1. Virtual screening and molecular design	249
13.5.2. Drug repurposing	249
13.5.3. Predictive modeling of drug–target interactions	250
13.5.4. AI in clinical trial design and optimization	250
13.5.5. Regulatory considerations and ethical implications	250
13.6. AI in patient monitoring and support	251
13.6.1. Virtual assistants and chatbots	251
13.6.2. Wearables and remote monitoring	252
13.6.3. Predictive health analytics and personalized support.	252
13.7. Ethical and legal considerations.	253
13.7.1. Data privacy and security.	253
13.7.2. Bias and fairness.	254
13.7.3. Explainability and trust	254
13.7.4. Regulatory oversight and accountability	255
13.8. Integration challenges and implementation	256
13.8.1. Interoperability	256
13.8.2. Clinical validation.	256
13.8.3. Workforce readiness.	256
13.9. Future outlook	256
13.10. Conclusion.	256
13.11. References.	257
Chapter 14. AI-driven Motion Analysis for Physiotherapy in Cancer Survivors.	261
Trupti YADAV, Anand GUDUR and Vibha VYAS	
14.1. Introduction.	261
14.1.1. Background	261
14.1.2. Aim and scope.	262
14.2. The role of physiotherapy in cancer survivorship	263
14.2.1. Physical impairments in cancer survivors	263
14.2.2. Current limitations in traditional physiotherapy	264
14.3. AI and motion analysis: technologies and techniques.	265
14.3.1. Motion capture systems	265
14.3.2. Machine learning and deep learning	266
14.3.3. Data integration and feedback systems	267
14.4. Applications in physiotherapy for cancer survivors	268
14.4.1. Post-surgical rehabilitation	268
14.4.2. Management of chemotherapy-induced neuropathy	268

14.4.3. Lymphedema and edema management	268
14.4.4. Fatigue and activity monitoring	268
14.5. AI in home-based rehabilitation.	269
14.5.1. Remote physiotherapy platforms.	269
14.5.2. Tele-rehabilitation with AI support	270
14.6. Case studies and clinical trials	271
14.6.1. Case study: breast cancer survivors	271
14.6.2. Randomized controlled trial: AI-guided gait training	272
14.6.3. Pilot study: AI in pediatric oncology rehabilitation	272
14.7. Benefits of AI-driven motion analysis	273
14.7.1. Objective and quantifiable assessment.	273
14.7.2. Personalized rehabilitation programs	273
14.7.3. Increased patient engagement and adherence	273
14.7.4. Enhanced clinical decision-making	274
14.8. Challenges and limitations.	274
14.8.1. Data privacy and security.	274
14.8.2. Algorithm bias and generalizability	274
14.8.3. Accessibility and cost	274
14.8.4. Integration into clinical workflows	274
14.9. Future directions	274
14.9.1. Federated learning for privacy-preserving AI.	274
14.9.2. Integration with wearable health ecosystems	275
14.9.3. Augmented reality and virtual reality integration.	275
14.9.4. AI coaches and conversational agents	275
14.10. Conclusion.	275
14.11. References	276
Chapter 15. AI-driven Innovations in Physiotherapy and Oncology: Advancing Postural Assessment, Rehabilitation and Patient-centered Care	279
G. HIMASHREE, Radhika CHINTAMANI and G. VARADHARAJULU	
15.1. Posture detector.	280
15.1.1. Introduction of posture	280
15.1.2. Introduction to posture detectors	282
15.1.3. Working principle	283
15.1.4. AI integration in posture detectors	286
15.1.5. Smart chairs	287
15.1.6. AI integration in SMART chairs	291
15.1.7. Literature review	293
15.2. Force plates	294
15.2.1. Introduction	294
15.2.2. Uses of force plates	294
15.2.3. Working principle	295

15.2.4. AI integration in force plates	297
15.2.5. Literature review	298
15.3. Conclusion	305
15.4. References	306

Chapter 16. Key Technologies of Artificial Intelligence: Robotics, Wearables and Big Data 309

Rohini BAWA and Surekha RANI

16.1. Introduction	309
16.2. Intervention of artificial intelligence (AI) in robotics and automation	310
16.3. Future fabric: smart clothing with AI.	317
16.4. AI wearables for the military	319
16.5. AI wearables in the fashion industry	320
16.6. AI technology for handling big data	320
16.7. Use of AI-handled big data	322
16.8. Conclusion and future scope	324
16.9. References	324

Chapter 17. Enhancing Health Data Security and Intelligence with Blockchain and Artificial Intelligence 329

Charu CHHABRA, Sohrab Ahmad KHAN, Harsirjan KAUR,

Kusum YADAV and Mohd. MAZHAR

17.1. Introduction	329
17.2. The need for secure health data sharing	330
17.2.1. Better patient care	331
17.2.2. Research and innovation advancements	331
17.2.3. Improved public health monitoring	331
17.3. Privacy concerns and security constraints	332
17.4. Blockchain technology.	332
17.4.1. MedRec record.	334
17.4.2. Medicalchain.	334
17.4.3. Gem blockchain network	334
17.4.4. PharmaLedger	334
17.5. Blockchain in health data sharing.	334
17.5.1. Patient-centered health records.	335
17.5.2. Interoperability	335
17.5.3. Consent management	335
17.5.4. Supply chain management	336
17.5.5. Research and clinical trials	336
17.6. Leveraging AI in health data sharing	337
17.7. Combining blockchain and AI for enhanced security	338

17.8. Challenges and concerns.	339
17.8.1. Scalability and interoperability.	339
17.8.2. Data privacy and consent	340
17.8.3. Best practices and standards	340
17.9. Conclusion	341
17.10. References	341
List of Authors	345
Index.	349
Summary of Volume 2	351
