Preface	xix
Abhishek KUMAR, Priya BATTA, Sachin AHUJA and Pramod Singh RATHORE	
Chapter 1. Advancements and Applications of Physiotherapy in Rehabilitation and Pain Management	1
G. HIMASHREE, G. VARADHARAJULU and Radhika CHINTAMANI	
1.1. Introduction	2
1.2. Composition of connective tissue	3
1.2.1. Composition of tendons	3
1.3. Tendon classification	5
1.4. Tendon vascularity.	6
1.4.1. Artificial intelligence (AI) to study tendon vascularity	7
1.5. Tendinous junction	10
1.5.1. AI for studying functions of the tendinous junction	11
1.6. Mechanical properties	13
1.6.1. Load-elongation curve	14
1.6.2. Using AI to study load-elongation curves	16
1.6.3. Determining stress–strain	18
1.6.4. Stress–strain curves.	19
1.6.5. Using AI to determine stress–strain	21
1.6.6. Effects of the rate of force application	24
1.6.7. Using AI to determine the rate of force applications on tendons during muscle contraction.	24
1.7. Viscoelastic behavior of tendons to tensile loads	27
1.7.1. Using AI to evaluate viscoelastic behavior	27
1.7.2. Stress-relaxation test	30
1.7.3. Creep-deformation test	30
1.8. Biomechanical response of tendons to nontensile loads	33

1.9. Impact of physical environment on mechanical properties.	34
1.9.1. Effects of temperature	34
1.10. Biological effects on mechanical properties	35
1.10.1. Effects of maturation and aging	35
1.10.2. Pregnancy and the postpartum period	35
1.11. Tendon injury mechanism.	36
1.11.1. Using AI for diagnosing tendon injuries.	37
1.11.2. Tendon healing	40
1.11.3. Using AI in tendon healing	41
1.12. Response of tendons to immobilization and mobilization	43
1.13. Conclusion	44
1.14. References	44

Chapter 2. Model Validation Techniques for AI in Cancer Research Based on Physiotherapy and Oncology.

Shraddha MOHITE, Suresh J. BHOSALE, Salim CHAVAN
and Kadam SHRIKANT

2.1. Introduction	50
2.2. Role of AI in oncology and physiotherapy	50
2.2.1. AI in oncology	51
2.2.2. AI in physiotherapy.	51
2.3. AI model development pipeline in cancer research.	52
2.3.1. Data collection	53
2.3.2. Data preprocessing	53
2.3.3. Creating and preparing new features	54
2.3.4. Computer-aided diagnosis system.	54
2.3.5. Model validation	55
2.3.6. Model interpretation and explainability.	56
2.3.7. Model deployment	56
2.4. Validation techniques	57
2.4.1. Internal validation.	57
2.4.2. External validation	58
2.4.3. Real-world validation and prospective testing	59
2.5. Key metrics for model evaluation	60
2.5.1. Classification metrics.	60
2.5.2. ROC curve and AUC	61
2.5.3. Calibration curve	61
2.5.4. Decision curve analysis (DCA)	62
2.5.5. Regression metrics	62
2.6. Challenges in validation for cancer physiotherapy models.	63
2.6.1. Data heterogeneity	63
2.6.2. Small sample sizes	63

2.6.3. Lack of standardization	64
2.6.4. Bias and fairness	64
2.6.5. Dynamic patient states	64
2.7. Regulatory and ethical considerations	65
2.7.1. Institutional requirements and norms	65
2.7.2. Ethical considerations in AI-driven rehabilitation	66
2.7.3. Clinical responsibility and integration	66
2.8. Future directions	67
2.9. Conclusion	67
2.10. References	68
 Chapter 3. The Role of Artificial Intelligence in Personalized Physiotherapy and Cancer Treatment	 73
S. ANANDH, Suresh J. BHOSALE and Sachin Purushottam UNTAWALE	
3.1. Introduction	73
3.2. Overview of AI in healthcare	75
3.2.1. Machine learning and deep learning	76
3.2.2. AI in precision medicine	77
3.3. Personalized physiotherapy	78
3.3.1. AI applications in physiotherapy	78
3.3.2. Use cases and applications	78
3.4. Personalized cancer treatment	79
3.4.1. AI in diagnosis and prognosis	81
3.4.2. Sequential activities in AI treatment planning and monitoring	81
3.4.3. Systematic studies	81
3.5. Challenges and ethical considerations	82
3.6. Prospects	83
3.7. Conclusion	84
3.8. References	85
 Chapter 4. Machine Learning in Oncology and Physiotherapy: A New Era of Precision Medicine	 89
Mandar MALAWADE, Shrushti P. JACHAK, Anand GUDUR and Sanjay L. BADIAT	
4.1. Introduction	89
4.2. Machine learning in oncology	91
4.2.1. Early detection and diagnosis	91
4.2.2. Prognosis and risk stratification	91
4.2.3. Treatment planning and optimization	92
4.2.4. Monitoring and follow-up	93

4.3. Machine learning in physiotherapy	94
4.3.1. Movement analysis and assessment	94
4.3.2. Predicting recovery outcomes	95
4.3.3. Robotics and intelligent prosthetics	96
4.3.4. Tele-rehabilitation and remote monitoring	96
4.3.5. Patient engagement and behavioral analytics	97
4.4. Challenges and limitations	98
4.5. Future directions	99
4.6. Conclusion	100
4.7. References	101
 Chapter 5. The Role of Physiotherapy in Enhancing Functional Recovery: Techniques, Benefits and Clinical Perspectives	 105
Radhika CHINTAMANI, G. VARADHARAJULU and G. HIMASHREE	
5.1. Introduction	106
5.2. Neural tissue mechanics	108
5.2.1. AI in neural tissue mechanics	110
5.3. Material properties	113
5.4. Quasi-linear viscoelasticity	115
5.4.1. AI-driven analysis of quasi-linear viscoelasticity	115
5.5. Load-deformation curve	118
5.5.1. AI in the load-deformation curve of peripheral nerves	120
5.6. Conclusion	122
5.7. References	123
 Chapter 6. AI-Powered Rehabilitation: Transforming Physiotherapy for Cancer Survivors	 127
Namrata KADAM, Suresh J. BHOSALE and Piyush Ashokrao DALKE	
6.1. Introduction	128
6.2. The burden of cancer survivorship	129
6.3. AI in healthcare and rehabilitation	131
6.4. Personalized rehabilitation for cancer survivors	132
6.5. Remote monitoring and tele-rehabilitation	133
6.6. Enhancing patient engagement and motivation	134
6.7. Clinical outcomes and evidence-based practice	135
6.8. Challenges and ethical considerations	137
6.9. Future directions and recommendations	137
6.10. Conclusion	138
6.11. References	139

Chapter 7. Future Directions in Oncology: Emerging Technologies and Artificial Intelligence in Physiotherapy 143

Chandrakant PATIL, Dhiraj Kumar MANE, Anand GUDUR
and Kalpana MALPE

7.1. Introduction	144
7.2. Emerging technologies in oncology physiotherapy	145
7.2.1. Wearable devices	145
7.2.2. Tele-rehabilitation	146
7.2.3. Virtual reality (VR) and augmented reality (AR)	147
7.2.4. Robotics and assistive technologies	148
7.2.5. Sensor-based monitoring systems	149
7.3. AI in oncology physiotherapy	150
7.3.1. AI in patient assessment	150
7.3.2. AI in treatment planning	151
7.3.3. AI in monitoring and feedback	151
7.3.4. Natural language processing (NLP) in documentation	151
7.3.5. AI virtual assistants and chatbots	151
7.4. Integration of technologies and AI in clinical practice	151
7.4.1. Interdisciplinary collaboration	151
7.4.2. Clinical applications and case studies	152
7.4.3. Teaching and continuing education	153
7.5. Challenges and ethical considerations	154
7.5.1. Data privacy and security	154
7.5.2. Accessibility to technology and equity	155
7.5.3. Bias and transparency in AI algorithms	155
7.5.4. Balance between humans and technology	155
7.6. Future directions	155
7.6.1. Integration of multi-modal data	155
7.6.2. Smart rehabilitation development	155
7.6.3. Automated AI exercise prescribing	155
7.6.4. Tele-rehabilitation development	156
7.6.5. Research and development	156
7.7. Conclusion	156
7.8. References	157

Chapter 8. Deep Learning in Oncology and Physiotherapy: Enhancing Diagnosis and Recovery 161

Poonam PATIL, Neeraja ASWALE, Dhiraj Kumar MANE
and Anand GUDUR

8.1. Introduction	161
8.2. DL fundamentals	162
8.2.1. Neural networks	162

8.2.2. Training and optimization	163
8.2.3. Evaluation metrics	164
8.3. DL applications in oncology	164
8.3.1. Early detection and diagnosis	164
8.3.2. Tumor classification and segmentation	165
8.3.3. Triaging for treatment response prediction	166
8.3.4. Prognosis and survival prediction	167
8.4. DL applications in physiotherapy	167
8.4.1. Motion analysis	167
8.4.2. Injury prediction and prevention.	168
8.4.3. Personalized rehabilitation	169
8.4.4. Remote monitoring and tele-rehabilitation	169
8.5. Challenges and limitations	170
8.5.1. Data quality and quantity.	170
8.5.2. Explainability	170
8.5.3. Incorporation into clinical workflows.	171
8.5.4. Ethical and legal considerations	171
8.6. Case studies	172
8.6.1. Detection of breast cancer	172
8.6.2. Rehabilitation after a stroke	173
8.7. Future directions	173
8.7.1. Multimodal learning	173
8.7.2. Federated learning	173
8.7.3. Human-in-the loop systems	173
8.7.4. Real-time applications	173
8.8. Conclusion	173
8.9. References	174
Chapter 9. Automating Cancer Detection and Rehabilitation: The AI Revolution	179
Suraj KANASE, Rashmi GUDUR and Rasika MANAPU	
9.1. Introduction	180
9.2. AI in cancer detection	182
9.2.1. Medical imaging and deep learning	182
9.2.2. Histopathological analysis	183
9.2.3. Interpreting genomic data	184
9.3. Predictive analytics and risk assessment.	185
9.3.1. Anticipating cancer risks	185
9.3.2. Prognostic models	186
9.4. Personalized treatment planning	187
9.4.1. Treatment recommendation systems	187
9.4.2. Drug discovery and repurposing.	188

9.5. AI in cancer rehabilitation	189
9.5.1. Prosthetics and assistive devices with advanced cognitive capabilities	189
9.5.2. Virtual rehabilitation platforms	190
9.5.3. Psychological support and monitoring	191
9.6. Challenges and ethical considerations	191
9.6.1. Data privacy and security	191
9.6.2. Algorithmic bias and transparency	192
9.6.3. Integration into clinical workflows	192
9.7. Case studies and clinical applications	192
9.7.1. AI in breast cancer screening	192
9.7.2. AI in lung cancer diagnosis	192
9.7.3. AI in post-cancer care	192
9.8. Future directions	193
9.8.1. Sharing data through federated learning	193
9.8.2. AI that can be explained	193
9.8.3. AI systems that use different modalities	193
9.9. Conclusion	193
9.10. References	194

Chapter 10. Physiotherapy: A Holistic Approach to Rehabilitation and Functional Wellness. 199

G. HIMASHREE, Radhika CHINTAMANI and G. VARADHARAJULU

10.1. Introduction.	199
10.2. AI in biomaterials	201
10.3. History	201
10.4. Biomaterials: properties, types and applications.	202
10.4.1. Mechanical properties and testing	202
10.4.2. AI in assessment of mechanical properties and testing	204
10.5. Metals	205
10.5.1. Metallic stress-shielding	206
10.5.2. AI in understanding metallic stress-shielding	208
10.6. Ceramics and glasses.	210
10.6.1. Stress–strain curve.	210
10.6.2. AI in understanding stress–strain curves	211
10.7. Polymers	213
10.7.1. AI in understanding stress–strain curve	215

10.8. Natural materials and composites	215
10.9. Conclusion	216
10.10. References	216

Chapter 11. AI and Wearable Technology in Physiotherapy for Oncology Patients 221

Trupti YADAV, Anand GUDUR and Vibha VYAS

11.1. Introduction	222
11.2. Background and motivation	224
11.2.1. Cancer rehabilitation needs	224
11.2.2. Role of technology in rehabilitation	225
11.3. Wearable technology in oncology physiotherapy	226
11.3.1. Types of wearable sensors	226
11.3.2. Applications in cancer physiotherapy	227
11.4. AI in oncology physiotherapy	227
11.4.1. Models of machine learning	228
11.4.2. Clinical applications	228
11.5. Case studies and clinical trials	229
11.5.1. Survivors of breast cancer and the management of lymphedema	229
11.5.2. Chemotherapy-induced peripheral neuropathy (CIPN)	230
11.5.3. Cardiorespiratory training in lung cancer patients	230
11.5.4. Tele-rehabilitation trials	231
11.6. Benefits and clinical impact	231
11.7. Challenges and limitations	232
11.7.1. Data privacy and security	232
11.7.2. Interoperability and standardization	232
11.7.3. Algorithm bias and generalization	233
11.7.4. Patient acceptance and usability	233
11.7.5. Cost and reimbursement	233
11.8. Future directions	234
11.8.1. Multimodal AI systems	234
11.8.2. Explainable AI (XAI)	234
11.8.3. Integration into clinical workflows	234
11.8.4. Personalized digital twins	235
11.8.5. Longitudinal monitoring and predictive analytics	235
11.9. Conclusion	235
11.10. References	236

Chapter 12. Smart Robotics in Physiotherapy and Oncology: Redefining Patient Outcomes 239

Pragati SALUNKHE, Suresh J. BHOSALE and Prashant S. JADHAV

12.1. Introduction	240
12.2. Background and technological foundations	241
12.2.1. Definition and scope of smart robotics	241
12.2.2. Innovations in medical robotics	242
12.3. Smart robotics in physiotherapy	243
12.3.1. Robotic exoskeletons and wearables.	243
12.3.2. Intelligent rehabilitation systems.	244
12.3.3. Benefits and clinical evidence	245
12.3.4. Case studies	246
12.4. Smart robotics in oncology	246
12.4.1. Robotic surgery	246
12.4.2. Diagnostic robotics	247
12.4.3. Robotic drug delivery systems	248
12.4.4. Oncology rehabilitation.	248
12.5. Integration with AI.	248
12.5.1. Personalized therapy planning	248
12.5.2. Predictive analytics	249
12.5.3. Feedback and monitoring at the same time	250
12.6. Challenges and limitations.	252
12.7. Future directions	253
12.7.1. Worldwide partnerships and uniformity-focused systems	253
12.8. Conclusion	253
12.9. References	254

Chapter 13. Recurrent Neural Networks for Predictive Modeling in Cancer Time Series Data 257

Mayiri BURUNGAL, Suresh J. BHOSALE, Rashmi GUDUR
and Shamla MANTRI

13.1. Introduction	257
13.2. Background and related work	258
13.2.1. Time series data in oncology	258
13.2.2. Traditional predictive models	259
13.2.3. The development of deep learning	260
13.3. RNN architectures	260
13.3.1. Vanilla RNN	260
13.3.2. LSTM.	261
13.3.3. GRUs	262
13.3.4. Bidirectional RNNs	262
13.3.5. Attention mechanisms.	263

13.4. Datasets and preprocessing	263
13.4.1. Challenges in data quality	264
13.5. Applications in cancer prediction	267
13.5.1. Survival analysis.	267
13.5.2. Treatment response	267
13.5.3. Disease progression	267
13.5.4. Early detection.	268
13.5.5. Personalized medicine	268
13.6. Evaluation metrics	268
13.7. Challenges and limitations.	269
13.8. Future directions	269
13.8.1. Integration of multimodal data	269
13.8.2. Federated learning.	269
13.8.3. Hybrid models	270
13.8.4. Clinical integration	270
13.8.5. Continuous learning	270
13.9. Conclusion	271
13.10. References	271

Chapter 14. The Role of Physiotherapy in Enhancing Functional Recovery in Musculoskeletal and Neurological Conditions 275

G. VARADHARAJULU, Radhika CHINTAMANI and G. HIMASHREE

14.1. Introduction.	276
14.1.1. Natural tissue construction	276
14.1.2. Natural tissue design	277
14.2. Hierarchical structure of cortical bone	277
14.2.1. Cells build natural tissues.	277
14.2.2. The ECM: nature's biomaterial scaffold.	279
14.2.3. The importance of tissue regeneration in physiotherapy	280
14.2.4. Factors affecting tissue healing.	283
14.2.5. Limitations for healing	283
14.2.6. Physiotherapy's role in promoting tissue regeneration	283
14.3. Psychological support	285
14.4. Application of artificial intelligence (AI) in tissue regeneration	285
14.4.1. Diagnostics for tissue repair	286
14.4.2. Predictive modeling of tissue healing	286
14.4.3. AI-assisted rehabilitation and therapy plans.	286
14.4.4. Real-time monitoring of tissue recovery.	287
14.4.5. Data-driven physiotherapy	287

14.5. Conclusion	288
14.6. References	288
Chapter 15. Biomechanics in Physiotherapy	291
Sougata PANDA and Seveka BALI	
15.1. Introduction	291
15.2. Methodology	294
15.3. Literature review	294
15.3.1. Basic biomechanics principles	294
15.3.2. The core biomechanical principles.	295
15.3.3. Biomechanics in clinical practice	299
15.3.4. Applications in assessment, rehabilitation and injury prevention	300
15.3.5. Manual therapy and movement assessment	303
15.3.6. Biomechanics innovations with advanced technologies	303
15.4. Results.	304
15.5. Discussion.	305
15.6. Conclusion	306
15.7. References	306
Chapter 16. Role of Physiotherapy in Cancer Recovery: A Review and Recommendation.	317
Sougata PANDA	
16.1. Introduction	317
16.2. Literature review	319
16.2.1 Recent studies on physiotherapy and cancer recovery	320
16.3. Methods	322
16.4. Result	322
16.4.1. Exercise and mobility training	322
16.4.2. Pain management techniques	323
16.4.3. Managing fatigue and lymphedema	324
16.4.4. Respiratory support	324
16.4.5. Post-surgical rehabilitation	324
16.4.6. Functional and physical outcomes	325
16.4.7. Psychological and social benefits	326
16.4.8. QoL and long-term recovery	327
16.5. Discussion.	327
16.6. Recommendations	327
16.7. Conclusion	328
16.8. References	328

Chapter 17. The Role of Artificial Intelligence in Modern Healthcare: Transforming Diagnosis, Treatment and Rehabilitation 335

Mamta

17.1. Introduction to artificial intelligence (AI) in healthcare.	335
17.1.1. Definition and overview of AI	336
17.1.2. Evolution of AI in medicine	336
17.2. Literature review	337
17.2.1. Current trends in AI applications in healthcare	338
17.2.2. Comparative study of AI methods in physiotherapy and oncology	339
17.3. Methodology	340
17.3.1. Research design and framework	340
17.3.2. Data collection and analysis techniques	341
17.4. How AI is disrupting healthcare today	342
17.4.1. Improving the discriminative performance	342
17.4.2. Customized treatment strategies	343
17.4.3. Early disease prevention and predictive analytics	343
17.5. Applications of AI across medical domains	343
17.5.1. Oncological aspects: early diagnosis and optimization of treatment.	344
17.5.2. Role in physiotherapy: customized rehabilitation plan.	345
17.6. Benefits of AI in healthcare	346
17.6.1. Improved patient outcomes	347
17.6.2. Efficacy of the delivery of health services	347
17.6.3. Cost-effectiveness and resource use	348
17.7. Challenges and ethical issues	348
17.7.1. Data privacy and security issues	349
17.7.2. Fairness and bias in algorithms.	350
17.7.3. AI for cybersecurity and fraud detection	350
17.8. The future of AI in healthcare.	351
17.8.1. Integration with novel technologies (e.g. robotics, wearables, the Internet of Things, blockchain)	351
17.8.2. The role of AI in preventive medicine.	353
17.9. Conclusion	354
17.10. References.	355

Chapter 18. Foundation of Artificial Intelligence in Healthcare 359

RUCHI, BAANI, Vikas WASSON and Kamini JOSHI

18.1. Introduction.	360
18.2. Overview of AI.	362

18.3. AI applications in medicine: literature review	365
18.4. AI-based healthcare: methodologies	370
18.4.1. Robotics in healthcare.	371
18.4.2. Wearables in healthcare.	374
18.4.3. Big data in healthcare	376
18.5. Conclusion and future scope	378
18.6. References	379
List of Authors	385
Index.	389
Summary of Volume 1	391
