Preface	xix
Priya BATTa, Abhishek KUMAR, S. Oswalt MANOJ, Dhaya CHINNATHAMBI and Srivel RAVI	
Chapter 1. Blockchain for Sustainable Agriculture: Enhancing Supply Chain Transparency and Reducing Carbon Footprint	1
R. DHANALAKSHMI, Dhaya CHINNATHAMBI, Sahaya Beni PRATHIBA and N. VIJAYARAGHAVAN	
1.1. Introduction	1
1.2. Literature review.	2
1.3. Application scenario: a blockchain-based secure supply chain for smart agriculture using smart contracts	8
1.3.1. Problem statement	8
1.3.2. Proposed system	8
1.3.3. Precision farming automation	10
1.3.4. Automated smart subsidy distribution.	10
1.4. Blockchain use cases in agriculture	11
1.4.1. Blockchain-based agricultural insurance	11
1.4.2. Blockchain-enabled land ownership and registration	11
1.4.3. Drone-assisted crop monitoring via blockchain	12
1.4.4. Blockchain-driven agri-credit and microloan access.	12
1.5. Limitations and future work	13
1.5.1. Limitations	13
1.5.2. Future work	13
1.6. Conclusion	14
1.7. References	15

Chapter 2. Decentralized Intelligence: How Blockchain and IoT Create Self-Regulating, Low-Emission Supply Networks	19
J. RAJESHWAR, Rakesh K.K., Abinaya K., J. SEETARAM, Dharmesh RATHOD and Venkateswara Rao CHEEKATI	
2.1. Introduction	20
2.1.1. Background	20
2.1.2. Supply chain blockchain	20
2.1.3. IoT for real-time monitoring	21
2.1.4. Leveraging blockchain and IoT: moving towards decentralized intelligence	21
2.1.5. Objectives	21
2.1.6. Scope.	22
2.2. Literature review.	23
2.2.1. Supply chain blockchain technology	23
2.2.2. Application of IoT to monitor in real time	23
2.2.3. Synergic benefit of blockchain and IoT integration	24
2.2.4. Greenhouse gas emissions and environmental impact reduction	24
2.2.5. Challenges and limitations	25
2.2.6. Scope for future research.	25
2.3. Methodology	25
2.3.1. System architecture design.	26
2.3.2. Blockchain and IoT integration process.	28
2.4. Simulation modeling of supply chain scenarios.	29
2.4.1. Supply chain structure	29
2.4.2. Scenarios simulated.	30
2.4.3. Key performance indicators	30
2.4.4. Simulation process	30
2.5. Implementation tools and technologies	31
2.5.1. Blockchain platform	31
2.5.2. IoT devices and protocols	31
2.5.3. Simulation environment	31
2.5.4. Validation and sensitivity analysis	32
2.5.5. Ethical and security considerations	32
2.5.6. Summary of methodology	32
2.6. Results	32
2.6.1. Minimization of emissions and their harmful effects	33
2.6.2. Operational efficiency and delivery performance	34
2.6.3. Data integrity, transparency and compliance enforcement	35
2.6.4. Detailed observations.	36
2.6.5. Summary of key findings.	37

2.7. Conclusion	37
2.8. References	38

Chapter 3. Blockchain-infused Data Mining: Extracting Actionable Insights for Sustainable Supply Chains and Carbon Neutrality 41

Hussain A., Lalitha Y., Ishwarya KOTHANDARAMAN, J. RAJESHWAR,
G. SWAPNA and P. VISVANATHAN

3.1. Introduction	42
3.1.1. Background	42
3.1.2. Motivation	42
3.1.3. Objectives	43
3.1.4. Scope of the study	43
3.1.5. Significance of blockchain integration	44
3.1.6. Role of data mining in emission reduction	44
3.1.7. Research contributions	45
3.1.8. Industrial relevance and use case example	45
3.2. Literature review.	45
3.2.1. Introduction	45
3.2.2. Blockchain supply chain management	46
3.2.3. Data mining for sustainable supply chains	46
3.2.4. Blockchain–data mining integration.	46
3.2.5. Challenges and consequences	47
3.2.6. Future directions	47
3.3. Methodology	47
3.3.1. Overview of the framework	48
3.3.2. Blockchain layer implementation	48
3.3.3. Data mining layer	49
3.3.4. Decision support layer	50
3.3.5. Data collection and simulation.	51
3.3.6. Evaluation metrics	52
3.3.7. Summary.	54
3.4. Results and discussion.	54
3.4.1. Overview of the experimental setup.	54
3.4.2. Emission hotspot identification	54
3.4.3. Association rule mining for emission patterns	55
3.4.4. Emission prediction using regression analysis	56
3.4.5. Decision tree analysis for emission reduction strategies.	57
3.4.6. Blockchain implementation outcomes	57
3.4.7. Overall impact on carbon emissions.	58
3.4.8. Comparative analysis with existing studies.	58

3.4.9. Limitations and future work	59
3.5. Conclusion	59
3.6. References	60
Chapter 4. Understanding Blockchain Basics	63
Amandeep KAUR and Anil SHARMA	
4.1. Introduction	63
4.2. Related work	66
4.2.1. Blockchain mechanism and smart contracts	66
4.2.2. Effectively managing the carbon footprint associated with supply chains	67
4.2.3. Establishing end-to-end traceability of supply chain carbon footprints via blockchain technology	67
4.2.4. Evolutionary game theory	68
4.3. Evolutionary game model.	69
4.3.1. Game model assumptions	70
4.3.2. Replicator dynamics in the evolutionary game model.	72
4.3.3. Carbon footprint reduction payoff matrix for the evolutionary game model	73
4.4. The evolutionary game model's strategy analysis and calculated rewards for PMs	75
4.4.1. Anticipated rewards.	75
4.5. Experimental results and analysis	77
4.5.1. Explanation of graphs and results	79
4.6. Conclusion and policy implication	81
4.6.1. Conclusion.	81
4.6.2. Policy enlightenments	82
4.7 References.	82
Chapter 5. Fortifying Green Supply Chains: Blockchain-backed Network Security for Resilient and Sustainable Logistics	87
D. ILAKKIASELVAN, J. SUJITHRA, V. Helen DEVA PRIYA, J. RAJESHWAR, J. SEETARAM and P. VISVANATHAN	
5.1. Introduction	87
5.1.1. Background	87
5.1.2. Problem statement	88
5.1.3. Objectives of the study	89
5.1.4. Significance of the study	89
5.1.5. Scope of the chapter	90
5.1.6. Methodological framework overview	91

5.2. Literature review	91
5.2.1. Introduction	91
5.2.2. Blockchain supply chain management	91
5.2.3. Blockchain-based state-of-the-art sustainability	92
5.2.4. Blockchain and supply chain security	92
5.2.5. Case studies and applications	92
5.2.6. Challenges and barriers to adoption	93
5.2.7. Future research directions	93
5.3. Methodology	93
5.3.1. Supply chain mapping and sustainability indicators	93
5.3.2. Blockchain architecture design	94
5.3.3. Smart contract implementation	95
5.3.4. IoT integration for real-time monitoring	97
5.3.5. Simulation environment and testbed	97
5.3.6. Key evaluation metrics	98
5.3.7. Cybersecurity enhancements	99
5.3.8. Ethical and sustainability considerations	100
5.3.9. Conclusion of methodology	100
5.4. Results and analysis	100
5.4.1. Environmental performance analysis	101
5.4.2. Security and data integrity evaluation	102
5.4.3. Operational efficiency improvements	103
5.4.4. Stakeholder trust and compliance outcomes	104
5.4.5. Inferred benefits of the blockchain-based model	105
5.4.6. Challenges observed and mitigation strategies	105
5.4.7. Real-world applicability	106
5.4.8. Future improvements and research directions	106
5.5. Conclusion	107
5.6. References	107
Chapter 6. Routing: Beyond Traditional Logistics: Blockchain-powered Smart Routing for Eco-efficient Supply Chain Navigation	111
E. BHARATH, Krunal RANDIVE, N. SARAVANA KUMAR, K. SAILAJA, Sakthitharan SUBRAMANIAN and A. Arul OLI	
6.1. Introduction	111
6.1.1. History of logistics and why smart routing is needed	112
6.1.2. Supply chain optimization with blockchain technology	112
6.1.3. Eco-efficiency with smart routing and blockchain technology	112
6.1.4. Future and challenges	113
6.2. Literature review	113

6.3. Methodology	115
6.3.1. Blockchain-enabled supply chain architecture	115
6.3.2. Smart routing algorithm with AI and sustainability constraints.	116
6.3.3. IoT data acquisition and integration.	117
6.3.4. Evaluation of routing efficiency and sustainability	117
6.3.5. Blockchain performance and network validation	118
6.4. Results	118
6.4.1. Emission reduction across supply chain stages.	118
6.4.2. Delivery performance and time efficiency	120
6.4.3. Operational cost savings from optimized routing	121
6.4.4. Blockchain network performance evaluation.	122
6.4.5. Sustainability and compliance index tracking	123
6.5. Conclusion	124
6.6. References	124
Chapter 7. Smart Grid-driven Demand Side Management Framework: Integrating IoT and Blockchain for Secure and Optimized Residential Energy Efficiency	127
P. VENKATESAN and C. GOPINATH	
7.1. Introduction	127
7.1.1. Background	127
7.1.2. Objectives	128
7.1.3. Scope.	129
7.1.4. Significance of the chapter.	131
7.2. Literature review: smart grid-driven demand side management framework: integrating IoT for optimized residential energy efficiency.	131
7.2.1. Introduction to demand side management	131
7.2.2. Smart grid technologies and DSM.	132
7.2.3. Role of IoT in DSM	132
7.2.4. Residential energy efficiency and smart grid integration	133
7.2.5. Advanced control and communication systems	133
7.2.6. Challenges in smart grid-driven DSM frameworks	134
7.2.7. Future research directions	134
7.3. Methodology	135
7.3.1. Design of the framework and architectural approach	135
7.3.2. Data collection and IoT device deployment	136
7.3.3. Communication protocols and data transmission	137
7.3.4. Algorithms from optimization and machine learning	137
7.3.5. Blockchain methodology.	138
7.3.6. Demand response strategies	139
7.3.7. Pilot study design and implementation	139

7.4. Results	141
7.4.1. Energy consumption analysis	141
7.4.2. Energy usage before and after implementation.	141
7.4.3. Energy consumption trends	144
7.4.4. Cost savings analysis	144
7.4.5. Monthly cost savings per household	144
7.4.6. Blockchain performance metrics	146
7.4.7. Cost savings based on energy consumption shifts	147
7.5. User behavior and engagement	147
7.5.1. Behavioral model: energy budget modulation	147
7.5.2. Effect of feedback mechanisms	148
7.6. Environmental impact.	148
7.6.1. Carbon emission reduction.	148
7.7. System performance and scalability	148
7.7.1. System reliability and performance metrics	148
7.7.2. Scalability	149
7.8. Future work	150
7.8.1. Scalability and integration with larger networks	150
7.8.2. Renewable energy integration	150
7.8.3. Advancements in AI and machine learning.	151
7.8.4. User engagement and behavior change	151
7.8.5. Privacy and security enhancements	152
7.8.6. Energy equity and accessibility	152
7.8.7. Integration with other smart city infrastructure.	152
7.9. Conclusion	153
7.10. References	154
 Chapter 8. Transforming Sustainability Through Blockchain: Reducing Food Waste and Improving Food Safety	 157
Madhavan SHANMUGAVEL, Vani SHANMUGADASS and S. SUDHARSAN	
8.1. Introduction	157
8.2. Blockchain solutions for addressing research gaps in food supply chain traceability	161
8.3. The use of blockchain technology for food quality and safety.	161
8.4. Blockchain in food supply chains: conceptual algorithm.	162
8.4.1. Key components	162
8.4.2. Workflow algorithm	163
8.4.3. Data validation via consensus	164
8.4.4. Add block to the chain	164
8.4.5. Track product movement.	165
8.4.6. Smart contract execution	165
8.4.7. Consumer access and verification	165

8.5. Results	166
8.6. References	166
Chapter 9. Transforming Green Value Chains: The Role of Blockchain in Sustainable and Ethical Supply Chains	169
Punitha SRIDHARAN and Sangeetha ANANDAN	
9.1. Introduction	170
9.2. Literature review.	171
9.3. Challenges in integrating blockchain into supply chain security frameworks	172
9.4. Scalability issues in blockchain.	173
9.4.1. Challenges in scalability	174
9.4.2. Approaches to improve blockchain scalability	174
9.5. Interoperability issues in blockchain.	175
9.5.1. Challenges in interoperability	175
9.5.2. Proposed solutions for interoperability	176
9.6. Data privacy concerns	176
9.6.1. Key challenges	176
9.6.2. Solutions to data privacy concerns	177
9.6.3. Key security challenges	178
9.6.4. Solutions to security concerns	179
9.7. Regulatory frameworks and standards (key regulatory frameworks for sustainability).	179
9.7.1. Environmental frameworks and climate agreements.	180
9.8. Carbon emissions accounting and disclosure standards	180
9.9. Data privacy and protection requirements	180
9.9.1. Key data protection regulations	181
9.10. Blockchain standards and best practices	182
9.11. Legal impacts of carbon credit trading on blockchain.	184
9.11.1. Markets in crypto-assets (MiCA) – Europe	184
9.11.2. Anti-money laundering (AML) and know your customer (KYC).	185
9.12. Best practices for compliance and implementation	185
9.12.1. Use permissioned blockchains	185
9.12.2. Align with international standards	185
9.12.3. Implement privacy-preserving technologies	186
9.13. Conclusion	186
9.14. References	187
Chapter 10. Tracking the Journey of a Sustainable Product: A Case Study	189
Surekha RANI, Rohini BAWA and Pooja SEHGAL	
10.1. Introduction	189

10.1.1. Basic effects of electronic products on the environment	191
10.1.2. Sustainable electronics using eco-friendly materials and design	192
10.2. Materials for sustainable circuit fabrication	192
10.3. Energy efficiency.	193
10.4. Modeling for upgradability, recycling and repairing	193
10.5. Evaluation of life cycle	193
10.6. Collaboration	193
10.6.1. Energy harvester for sustainable development: a case study.	193
10.7. Wearable energy harvesters	194
10.7.1. Piezoelectric effect-based energy harvester	195
10.7.2. Electrostatic energy harvester	198
10.7.3. Thermoelectric energy harvester	199
10.7.4. Opportunities in sustainable circuit design	200
10.7.5. Hurdles in sustainable and green circuit design.	200
10.7.6. Biomass waste: potential candidate for sustainable bioproducts	201
10.8. Techno-economical aspects on environmental bioresource recovery	202
10.8.1. Conclusion and future scope	203
10.9. References	203
Chapter 11. Blockchain in Action Across the Supply Chain: Ethical Sourcing and Blockchain Verification	207
Kousika N., Latha Maheswari T., Ramya V., Parvathy K., Nirmala R., and Majidha Fathima K.M	
11.1. Introduction.	207
11.2. Historical conceptualization.	211
11.3. Understanding vulnerabilities in conventional supply chains before blockchain integration	215
11.4. Security vulnerabilities and attack mechanisms in blockchain-based supply chains	216
11.5. Conclusions.	218
11.6. References	219
Chapter 12. Securing Sustainable Supply Chains Through Blockchain and AI Integration	221
Dhaya CHINNATHAMBI, Deva DINESH, Madhavan SHANMUGAVEL and Vani SHANMUGADASS	
12.1. Introduction.	222
12.2. Literature review	223
12.3. Methodology	226
12.3.1. Data collection.	227
12.3.2. Data analysis.	228
12.3.3. Triangulation and integration.	231

12.3.4. Ethical considerations	231
12.4. Results and inference	232
12.4.1. Malware detection	232
12.4.2. Anomaly detection in network traffic	232
12.4.3. Threat prediction and intelligence forecasting	233
12.4.4. Synthesis of findings	233
12.5. Conclusion	234
12.6. References	235
 Chapter 13. Machine Learning: AI Meets Blockchain: Machine Learning-driven Carbon Footprint Analysis for Next-Gen Sustainable Supply Chains	 237
S. Sakthi RAADHA, Pavithra J., Kaviyaraj R., Ravi AAVULA, Sakthitharan SUBRAMANIAN and S. VENKATESWARAN	
13.1. Introduction	238
13.1.1. Machine learning for carbon footprint analysis	238
13.1.2. Traceability and transparency through blockchain technology	238
13.1.3. Blockchain–AI integration for green supply chains	239
13.1.4. Benefits and drawbacks of the AI–blockchain solution	239
13.1.5. Industry implications and future directions	239
13.2. Literature review	240
13.3. Methodology	241
13.3.1. Data collection and integration	241
13.3.2. Machine learning for carbon emission prediction	242
13.3.3. Blockchain for data traceability and verification	243
13.3.4. Performance evaluation of the integrated model	245
13.3.5. Use-case simulation and carbon reduction analysis	245
13.4. Result	246
13.4.1. Carbon emission reduction across supply chain	246
13.4.2. Machine learning model accuracy	247
13.4.3. Blockchain transaction efficiency	248
13.4.4. Energy source optimization through AI analysis	249
13.4.5. Overall impact summary	250
13.5. Conclusion	251
13.6. References	252
 Chapter 14. GreenSync Solutions: Unifying Blockchain and IoT for Efficient, Low-Carbon Global Supply Chains	 255
B. GANESH, R. JOTHIRANI, Saraswathi S., Murugan PERUMAL, K. Praveen KUMAR and R. KANCHANA	
14.1. Introduction	256
14.2. Literature review	258

14.2.1. Blockchain–supply chain integration	258
14.2.2. Blockchain + IoT architectures	258
14.2.3. Carbon emission accountability	258
14.2.4. Consensus and efficiency optimization	259
14.2.5. Sustainability perspectives	259
14.2.6. Adoption challenges and drivers	259
14.2.7. Open issues and research gaps	259
14.3. Methodology	260
14.3.1. System architecture design	260
14.3.2. Implementation and deployment	262
14.3.3. Evaluation and metrics	264
14.4. Results.	266
14.4.1. Environmental impact.	266
14.4.2. Operational efficiency gains	267
14.4.3. Data integrity and error minimization	268
14.4.4. Transaction speed and processing	269
14.5. Conclusion	270
14.6. References	271

Chapter 15. Carbon-conscious Supply Networks: Harnessing Blockchain and IoT for Enhanced Efficiency and Sustainability in Global Logistics 273

Satheeshkumar N., S. SENTHILKUMAR, Varalakshmi P.,
Sakthitharan SUBRAMANIAN, Devi D. and S. VENKATESWARAN

15.1. Introduction.	274
15.2. Literature review	275
15.2.1. Supply chain tracking using IoT	276
15.2.2. Transparency and trust with blockchain.	276
15.2.3. Integrated blockchain–IoT systems	276
15.2.4. Gaps and contributions	277
15.3. Methodology	277
15.3.1. Research design	278
15.3.2. Data collection.	278
15.3.3. Simulation model	279
15.3.4. Case study approach.	281
15.3.5. Performance metrics.	281
15.3.6. Analysis techniques	281
15.4. Results.	282
15.4.1. Quantitative results: simulation outputs	282
15.4.2. Statistical analysis	284
15.4.3. Case study findings	285
15.4.4. Qualitative insights	287

15.4.5. Discussion of results	287
15.4.6. Limitations	288
15.4.7. Implications	288
15.5. Conclusion	289
15.6. References	289
Chapter 16. Decentralized IoT-driven Smart Water Management System Using Blockchain Technology	293
Madhavan SHANMUGAVEL and Vani SHANMUGADASS	
16.1. Introduction	293
16.2. Methodology	296
16.2.1. Design of the system architecture	297
16.2.2. Data collection and transmission	297
16.2.3. Blockchain development	297
16.2.4. Smart contract automation	298
16.2.5. Data analytics and decision support	298
16.2.6. System testing and validation	298
16.3. Mathematical model	299
16.4. IoT devices	300
16.5. Blockchain layer	301
16.6. User interface	301
16.7. Communication layer	301
16.8. Data analytical layer	302
16.9. Other related components used in the water management system	302
16.10. Discussion and conclusion	302
16.11. References	304
Chapter 17. Vision for a Greener Tomorrow	305
Shivani SHARMA and Jasneet CHAWLA	
17.1. Introduction	306
17.2. Literature review	309
17.2.1. Decentralized solutions for a greener economy	311
17.2.2. Transformation of industries with sustainable practices	312
17.2.3. Enhancing environmental accountability	313
17.3. Methodology	314
17.4. Results and discussion on vision for a greener tomorrow and case studies	317
17.4.1. Overcoming challenges and exploring innovations	318
17.4.2. Green blockchain innovations	319
17.4.3. Envisioning a sustainable future	321

17.5. Conclusion and future direction.	324
17.6. References	328
List of Authors	331
Index.	337
