<b>Preface</b> . . . . .	xi
<b>List of Acronyms</b> . . . . .	xiii
<b>Introduction</b> . . . . .	xxi
<b>Chapter 1. Shannon's Theorem in Classic Data Processing</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Shannon's theorem . . . . .	2
1.3. Shannon's capacity channel. . . . .	5
1.4. Sampling . . . . .	6
1.5. Shannon's theorem in cryptography . . . . .	7
<b>Chapter 2. Shannon's Theorem in Quantum Data</b> . . . . .	9
2.1. Introduction . . . . .	9
2.2. Definition of quantum entropy . . . . .	11
2.3. The Holevo bound . . . . .	11
2.4. Quantum aspects of compressed sensing . . . . .	11
2.5. Compressibility and capacity . . . . .	12
2.6. Conclusion. . . . .	15
<b>Chapter 3. Sparse Signals and Compressed Sensing</b> . . . . .	17
3.1. Introduction . . . . .	17
3.2. Definition of sparse decomposition . . . . .	17
3.3. Sparse signals . . . . .	18

3.4. Compressed sensing and optimization . . . . .	19
3.5. Reconstructing the sparse signal . . . . .	20
<b>Chapter 4. Compressed Sensing and the Fourier Transform . . . . .</b>	<b>23</b>
4.1. Introduction . . . . .	23
4.2. Fast SFT . . . . .	24
4.3. Random matrices in compressed sensing . . . . .	27
4.3.1. Gaussian measurements . . . . .	29
4.3.2. Binary measurements . . . . .	29
4.3.3. Fourier measurements . . . . .	30
4.3.4. Incoherent measurements . . . . .	30
4.4. Conclusion . . . . .	31
<b>Chapter 5. Compressed Sensing and Entanglement . . . . .</b>	<b>33</b>
5.1. Introduction . . . . .	33
5.2. Uncertainty relationships . . . . .	34
5.3. Phantom images . . . . .	34
5.4. Sparsity in practice . . . . .	35
5.5. Chaotic and quantum encryption software . . . . .	36
5.5.1. Introduction . . . . .	36
5.5.2. The software's content . . . . .	36
<b>Chapter 6. Compressed Sensing in LiFi Systems in Mobile Communications and Cryptography . . . . .</b>	<b>39</b>
6.1. Introduction . . . . .	39
6.2. Applications in digital communications: estimating the channel in OFDM systems . . . . .	42
6.2.1. Introduction . . . . .	43
6.2.2. Interpreting time–frequency and pilot distribution . . . . .	45
6.2.3. Estimating the block-type channel . . . . .	47
6.2.4. Estimating the channel by LS . . . . .	48
6.2.5. Estimating the channel by minimal mean quadratic error . . . . .	49
6.2.6. Estimating the comb-type channel . . . . .	50
6.2.7. LS estimator with 1D interpolation . . . . .	52
6.2.8. Maximum likelihood estimator . . . . .	54
6.2.9. PCMB estimator . . . . .	54
6.3. An application in cryptography: the SAC–OCDMA system . . . . .	56
6.3.1. Introduction . . . . .	56
6.3.2. The concept of code . . . . .	57

6.3.3. Digital analysis of the MFCC code's performances . . . . .	60
6.3.4. Results and discussions . . . . .	63
6.4. Conclusion . . . . .	67
<b>Chapter 7. Compressed Sensing in WiFi Systems . . . . .</b>	<b>69</b>
7.1. Preliminaries on compressed sensing in WiFi systems . . . . .	69
7.2. Interconnection of WiMAX mobile and satellite DVB-S/RCS networks . . . . .	72
7.2.1. Introduction . . . . .	72
7.2.2. Satellite: a communication tool . . . . .	73
7.2.3. The DVB norm . . . . .	74
7.2.4. Satellite networks . . . . .	77
7.2.5. Transmission chain . . . . .	82
7.2.6. Satellite system (DVB-RCS). . . . .	84
7.2.7. Protocol stack. . . . .	86
7.2.8. Physical layer. . . . .	87
7.2.9. Access method . . . . .	89
7.2.10. Deploying IP by satellite IPoS . . . . .	91
7.2.11. Methods of encapsulating IP packets . . . . .	92
7.2.12. ULE encapsulation and header extensions . . . . .	92
7.2.13. Interconnection of WiMAX mobile and satellite DVB- S networks: RCS. . . . .	94
7.2.14. Interconnection model and mobility scenarios . . . . .	94
7.2.15. Simulation scenarios. . . . .	95
7.2.16. Results . . . . .	100
7.2.17. Discussion of the results. . . . .	105
7.2.18. Conclusion. . . . .	106
<b>Chapter 8. Compressed Sensing in Interconnections Covering WiMAX, UMTS and MANET Satellite Networks. . . . .</b>	<b>107</b>
8.1. Introduction . . . . .	107
8.2. Heterogeneous networks. . . . .	108
8.3. Demands of heterogeneous networks . . . . .	108
8.3.1. Demands on the network core . . . . .	109
8.4. Other interconnection methods. . . . .	114
8.4.1. The interconnection suggested by the 3GPP project . . . . .	114
8.4.2. Interconnection suggested by the IEEE . . . . .	115
8.4.3. The IEEE 802.21 standard . . . . .	116
8.5. Transparency in communications . . . . .	119

8.5.1. The process of decision-making for triggering an inter-network handover . . . . .	119
8.5.2. Mobile-controlled handover (MCHO). . . . .	120
8.5.3. Network-controlled handover (NCHO) . . . . .	120
8.5.4. Mobile-assisted handover (MAHO) . . . . .	120
8.5.5. Network-assisted handover (NAHO) . . . . .	120
8.6. Classes of service . . . . .	121
8.6.1. Conversational services . . . . .	121
8.6.2. Interactive classes of service . . . . .	121
8.6.3. Services in the streaming class . . . . .	122
8.6.4. Background class services. . . . .	122
8.7. Interconnection covering satellite, WiMAX, UMTS and MANET networks . . . . .	122
8.7.1. Interconnection models . . . . .	123
8.7.2. Simulation scenarios . . . . .	124
8.7.3. Simulation parameters . . . . .	126
8.7.4. Performance criteria . . . . .	126
8.8. The results . . . . .	127
8.9. Discussion of results. . . . .	129
8.10. Conclusion. . . . .	130
<b>Chapter 9. Compressed Sensing in Radar Interferometry . . . . .</b>	<b>133</b>
9.1. Formatting interferograms . . . . .	133
9.1.1. Registration . . . . .	134
9.2. SWR synthesis . . . . .	134
9.3. Geometric deformation . . . . .	135
9.4. Re-sampling . . . . .	137
9.5. Geometric interpretation of the registration . . . . .	138
9.5.1. Resulting images . . . . .	139
9.5.2. Eliminating orbital fringes. . . . .	140
9.6. Simulated interferograms. . . . .	142
9.6.1. Performances in terms of distorted regions . . . . .	145
9.6.2. Performances in terms of RMSE . . . . .	147
9.7. Methods for minimizing norms . . . . .	148
9.7.1. $L^p$ norms . . . . .	148
9.7.2. $L^2$ norm . . . . .	149
9.7.3. $L^1$ norm . . . . .	150
9.7.4. Small value norms of $p$ . . . . .	150
9.8. Conclusion . . . . .	150

---

<b>Chapter 10. Compressed Sensing in Radars</b> . . . . .	153
10.1. Introduction . . . . .	153
10.2. Description of the system . . . . .	156
10.3. System analysis . . . . .	158
10.3.1. Transmitter . . . . .	158
10.3.2. The receiver . . . . .	159
10.4. Transmission channel. . . . .	160
10.5. Decision variables. . . . .	160
10.6. ANN-CFAR detector . . . . .	165
10.6.1. Learning phase . . . . .	167
10.6.2. Learning algorithm. . . . .	167
10.6.3. Validation phase . . . . .	169
10.7. Probability of detection and of false alarm . . . . .	169
10.8. Mean acquisition time . . . . .	170
10.9. Results and discussions. . . . .	170
10.10. Conclusion . . . . .	180
<b>Chapter 11. Compressed Sensing in Electromagnetism</b> . . . . .	181
11.1. Introduction . . . . .	181
11.2. Compressed sensing in electromagnetism. . . . .	181
11.3. Application of compressed sensing and electromagnetism: a solution for diffusion using an arbitrarily formed conductive structure by the moment method. . . . .	184
11.3.1. Introduction . . . . .	184
11.3.2. Matric formulation . . . . .	184
11.3.3. Convergence of the method of moments . . . . .	189
11.3.4. The solution's non-uniqueness . . . . .	190
11.3.5. Application on a sphere . . . . .	190
11.3.6. Conclusion. . . . .	197
<b>Conclusion</b> . . . . .	199
<b>Bibliography</b> . . . . .	201
<b>Index</b> . . . . .	227
