| Chapter 1. Solid-phase Supported Chemistry | 1 |
| Géraldine GOUHIER | |
| 1.1. Introduction | 1 |
| 1.2. Principle of solid-phase chemistry | 2 |
| 1.3. Advantages | 4 |
| 1.4. Safety and environment | 4 |
| 1.5. Disadvantages and limitations | 5 |
| 1.6. Evolution | 6 |
| 1.7. Supports: linear skeletons | 6 |
| 1.8. Three-dimensional resins | 7 |
| 1.8.1. Macroporous resins | 7 |
| 1.8.2. Gel resins | 8 |
| 1.9. Characteristics of gel supports | 10 |
| 1.9.1. Functionalization rate | 10 |
| 1.9.2. Swelling properties | 10 |
| 1.9.3. Size of the beads | 12 |
| 1.9.4. Influence of cross-linking on swelling | 12 |
| 1.9.5. Diffusion effect | 13 |
| 1.9.6. Influence of cross-linking on diffusion | 13 |
| 1.9.7. Influence of steric bulk | 14 |
| 1.9.8. Influence of agitation | 14 |
| 1.9.9. Proximity and pseudodilution effects | 14 |
| 1.9.10. Proximity effect | 15 |
| 1.9.11. Pseudodilution effect | 15 |
| 1.9.12. Availability and costs | 16 |
| 1.10. Functionalization of the solid support | 17 |

| | |
|--|----|
| 1.10.1. Spacer arms | 17 |
| 1.10.2. Linkers | 18 |
| 1.10.3. Influence of functionalization | 19 |
| 1.11. Analytical methods and reaction monitoring | 20 |
| 1.11.1. Centesimal analyses | 20 |
| 1.11.2. Colorimetric dosages | 22 |
| 1.11.3. Indirect analyses | 23 |
| 1.11.4. Infrared spectroscopy | 23 |
| 1.11.5. Nuclear magnetic resonance spectrometry | 24 |
| 1.11.6. Mass spectrometry | 29 |
| 1.12. Solid-phase syntheses | 29 |
| 1.12.1. Supported reagents | 29 |
| 1.12.2. Supported chiral catalysts | 32 |
| 1.12.3. Scavengers | 34 |
| 1.13. Innovative applications and processes | 35 |
| 1.13.1. Examples | 35 |
| 1.13.2. Parallel syntheses on a solid support | 37 |
| 1.14. Activation on solid phase | 40 |
| 1.14.1. Microwave reactions | 40 |
| 1.14.2. Reactions under high pressure | 42 |
| 1.14.3. Reactions under ultrasound | 42 |
| 1.14.4. Supported electrochemical reactions | 43 |
| 1.14.5. Reactions in ionic liquid | 43 |
| 1.15. Industrial applications and prospects | 45 |
| 1.16. Conclusion | 45 |
| 1.17. References | 45 |
| | |
| Chapter 2. Fluorous Tags and Phases for Synthesis and Catalysis | 57 |
| Jean-Marc VINCENT | |
| 2.1. Introduction | 57 |
| 2.2. Structures and properties of fluorous tags and phases | 58 |
| 2.2.1. History of fluorous chemistry | 58 |
| 2.2.2. Fluorous tags | 59 |
| 2.2.3. Fluorous solvents | 60 |
| 2.2.4. Solid fluorous phases | 62 |
| 2.3. Separation/recycling methodologies using fluorous tags and phases | 64 |
| 2.3.1. Application for catalysis | 64 |
| 2.3.2. Application for synthesis | 75 |

| | |
|---|------------|
| 2.4. Conclusion | 90 |
| 2.5. References | 90 |
| Chapter 3. Chemistry In and On Water | 99 |
| Marie-Christine SCHERRMANN | |
| 3.1. Introduction | 99 |
| 3.1.1. Presentation and history | 99 |
| 3.1.2. Position in the context of green chemistry | 100 |
| 3.2. General: origin of reactivity in and on water | 100 |
| 3.2.1. Water structure and properties | 100 |
| 3.2.2. Chemistry in water: the hydrophobic effect | 102 |
| 3.2.3. Origin of reactivity on water | 106 |
| 3.3. Limitations of the method | 107 |
| 3.4. Reactivity in and on water | 107 |
| 3.4.1. Pericyclic reactions | 107 |
| 3.4.2. Addition reactions of carbonyl derivatives | 121 |
| 3.4.3. Coupling reactions catalyzed by transition metals | 127 |
| 3.4.4. Radical reactions | 135 |
| 3.4.5. Oxidation and reduction reactions | 136 |
| 3.5. Multistep syntheses | 142 |
| 3.6. Industrial applications | 143 |
| 3.7. Conclusion | 144 |
| 3.8. References | 145 |
| Chapter 4. Solvent-free Chemistry | 169 |
| Thomas-Xavier MÉTRO, Xavier BANTREIL, Jean MARTINEZ and Frédéric LAMATY | |
| 4.1. Introduction | 169 |
| 4.2. General information on solvent-free synthesis: why use a solvent? | 170 |
| 4.3. Working without solvents | 170 |
| 4.4. Limitations of the technique | 171 |
| 4.5. In practice: methods and reactivity | 172 |
| 4.5.1. Methods and equipment | 172 |
| 4.5.2. Examples | 172 |
| 4.5.3. Scaling up: industrial applications | 173 |
| 4.6. Mortar and pestle | 176 |
| 4.6.1. Methods and equipment | 176 |
| 4.6.2. Examples | 176 |
| 4.6.3. Scaling up: industrial applications | 177 |
| 4.7. Ball-mills | 178 |

| | |
|---|-----|
| 4.7.1. Methods and equipment | 178 |
| 4.7.2. Examples | 180 |
| 4.7.3. Scaling up: industrial applications | 185 |
| 4.8. Extruders | 190 |
| 4.8.1. Methods and equipment | 190 |
| 4.8.2. Examples | 191 |
| 4.9. Microwave irradiation. | 192 |
| 4.9.1. Methods and equipment | 192 |
| 4.9.2. Examples | 194 |
| 4.9.3. Scaling up: industrial applications | 196 |
| 4.10. Photochemistry | 198 |
| 4.10.1. Methods and equipment | 198 |
| 4.10.2. Examples | 199 |
| 4.10.3. Scaling up: industrial applications | 201 |
| 4.11. Comparison of techniques | 204 |
| 4.12. Conclusion. | 206 |
| 4.13. References | 206 |
