Preface	x ⁱ
Chapter 1. Historical Elements of Matrices and Tensors	1
Chapter 2. Algebraic Structures	9
2.1. A few historical elements	9
2.2. Chapter summary	11
2.3. Sets	12
2.3.1. Definitions	12
2.3.2. Sets of numbers	13
2.3.3. Cartesian product of sets	13
2.3.4. Set operations	14
2.3.5. De Morgan's laws	15
2.3.6. Characteristic functions	15
2.3.7. Partitions	16
2.3.8. σ -algebras or σ -fields	16
2.3.9. Equivalence relations	16
2.3.10. Order relations	17
2.4. Maps and composition of maps	17
2.4.1. Definitions	17
2.4.2. Properties	18
2.4.3. Composition of maps	18
2.5. Algebraic structures	18
2.5.1. Laws of composition	18
2.5.2. Definition of algebraic structures	22
2.5.3. Substructures	24
2.5.4. Quotient structures	24
2.5.5. Groups	24

2.5.6. Rings	27
2.5.7. Fields	32
2.5.8. Modules	33
2.5.9. Vector spaces	33
2.5.10. Vector spaces of linear maps	38
2.5.11. Vector spaces of multilinear maps	39
2.5.12. Vector subspaces	41
2.5.13. Bases	43
2.5.14. Sum and direct sum of subspaces	45
2.5.15. Quotient vector spaces	47
2.5.16. Algebras	47
2.6. Morphisms	49
2.6.1. Group morphisms	49
2.6.2. Ring morphisms	51
2.6.3. Morphisms of vector spaces or linear maps	51
2.6.4. Algebra morphisms	56
Chapter 3. Banach and Hilbert Spaces – Fourier Series and Orthogonal Polynomials	57
3.1. Introduction and chapter summary	57
3.2. Metric spaces	59
3.2.1. Definition of distance	60
3.2.2. Definition of topology	60
3.2.3. Examples of distances	61
3.2.4. Inequalities and equivalent distances	62
3.2.5. Distance and convergence of sequences	62
3.2.6. Distance and local continuity of a function	62
3.2.7. Isometries and Lipschitzian maps	63
3.3. Normed vector spaces	63
3.3.1. Definition of norm and triangle inequalities	63
3.3.2. Examples of norms	64
3.3.3. Equivalent norms	68
3.3.4. Distance associated with a norm	69
3.4. Pre-Hilbert spaces	69
3.4.1. Real pre-Hilbert spaces	70
3.4.2. Complex pre-Hilbert spaces	70
3.4.3. Norm induced from an inner product	72
3.4.4. Distance associated with an inner product	75
3.4.5. Weighted inner products	76
3.5. Orthogonality and orthonormal bases	76
3.5.1. Orthogonal/perpendicular vectors and Pythagorean theorem	76
3.5.2. Orthogonal subspaces and orthogonal complement	77
3.5.3. Orthonormal bases	79
3.5.4. Orthogonal/unitary endomorphisms and isometries	79

3.6. Gram–Schmidt orthonormalization process	80
3.6.1. Orthogonal projection onto a subspace	80
3.6.2. Orthogonal projection and Fourier expansion	80
3.6.3. Bessel’s inequality and Parseval’s equality	82
3.6.4. Gram–Schmidt orthonormalization process	83
3.6.5. QR decomposition	85
3.6.6. Application to the orthonormalization of a set of functions	86
3.7. Banach and Hilbert spaces	88
3.7.1. Complete metric spaces	88
3.7.2. Adherence, density and separability	90
3.7.3. Banach and Hilbert spaces	91
3.7.4. Hilbert bases	93
3.8. Fourier series expansions	97
3.8.1. Fourier series, Parseval’s equality and Bessel’s inequality	97
3.8.2. Case of 2π -periodic functions from \mathbb{R} to \mathbb{C}	97
3.8.3. T -periodic functions from \mathbb{R} to \mathbb{C}	102
3.8.4. Partial Fourier sums and Bessel’s inequality	102
3.8.5. Convergence of Fourier series	103
3.8.6. Examples of Fourier series	108
3.9. Expansions over bases of orthogonal polynomials	117
Chapter 4. Matrix Algebra	123
4.1. Chapter summary	123
4.2. Matrix vector spaces	124
4.2.1. Notations and definitions	124
4.2.2. Partitioned matrices	125
4.2.3. Matrix vector spaces	126
4.3. Some special matrices	127
4.4. Transposition and conjugate transposition	128
4.5. Vectorization	130
4.6. Vector inner product, norm and orthogonality	130
4.6.1. Inner product	130
4.6.2. Euclidean/Hermitian norm	131
4.6.3. Orthogonality	131
4.7. Matrix multiplication	132
4.7.1. Definition and properties	132
4.7.2. Powers of a matrix	134
4.8. Matrix trace, inner product and Frobenius norm	137
4.8.1. Definition and properties of the trace	137
4.8.2. Matrix inner product	138
4.8.3. Frobenius norm	138
4.9. Subspaces associated with a matrix	139

4.10. Matrix rank	141
4.10.1. Definition and properties	141
4.10.2. Sum and difference rank	143
4.10.3. Subspaces associated with a matrix product	143
4.10.4. Product rank	144
4.11. Determinant, inverses and generalized inverses	145
4.11.1. Determinant	145
4.11.2. Matrix inversion	148
4.11.3. Solution of a homogeneous system of linear equations	149
4.11.4. Complex matrix inverse	150
4.11.5. Orthogonal and unitary matrices	150
4.11.6. Involutory matrices and anti-involutory matrices	151
4.11.7. Left and right inverses of a rectangular matrix	153
4.11.8. Generalized inverses	155
4.11.9. Moore–Penrose pseudo-inverse	157
4.12. Multiplicative groups of matrices	158
4.13. Matrix associated to a linear map	159
4.13.1. Matrix representation of a linear map	159
4.13.2. Change of basis	162
4.13.3. Endomorphisms	164
4.13.4. Nilpotent endomorphisms	166
4.13.5. Equivalent, similar and congruent matrices	167
4.14. Matrix associated with a bilinear/sesquilinear form	168
4.14.1. Definition of a bilinear/sesquilinear map	168
4.14.2. Matrix associated to a bilinear/sesquilinear form	170
4.14.3. Changes of bases with a bilinear form	170
4.14.4. Changes of bases with a sesquilinear form	171
4.14.5. Symmetric bilinear/sesquilinear forms	172
4.15. Quadratic forms and Hermitian forms	174
4.15.1. Quadratic forms	174
4.15.2. Hermitian forms	176
4.15.3. Positive/negative definite quadratic/Hermitian forms	177
4.15.4. Examples of positive definite quadratic forms	178
4.15.5. Cauchy–Schwarz and Minkowski inequalities	179
4.15.6. Orthogonality, rank, kernel and degeneration of a bilinear form .	180
4.15.7. Gauss reduction method and Sylvester’s inertia law	181
4.16. Eigenvalues and eigenvectors	184
4.16.1. Characteristic polynomial and Cayley–Hamilton theorem . . .	184
4.16.2. Right eigenvectors	186
4.16.3. Spectrum and regularity/singularity conditions	187
4.16.4. Left eigenvectors	188
4.16.5. Properties of eigenvectors	188
4.16.6. Eigenvalues and eigenvectors of a regularized matrix	190
4.16.7. Other properties of eigenvalues	190

4.16.8. Symmetric/Hermitian matrices	191
4.16.9. Orthogonal/unitary matrices	193
4.16.10. Eigenvalues and extrema of the Rayleigh quotient	194
4.17. Generalized eigenvalues	195
Chapter 5. Partitioned Matrices	199
5.1. Introduction	199
5.2. Submatrices	200
5.3. Partitioned matrices	201
5.4. Matrix products and partitioned matrices	202
5.4.1. Matrix products	202
5.4.2. Vector Kronecker product	202
5.4.3. Matrix Kronecker product	202
5.4.4. Khatri–Rao product	204
5.5. Special cases of partitioned matrices	205
5.5.1. Block-diagonal matrices	205
5.5.2. Signature matrices	205
5.5.3. Direct sum	205
5.5.4. Jordan forms	206
5.5.5. Block-triangular matrices	206
5.5.6. Block Toeplitz and Hankel matrices	207
5.6. Transposition and conjugate transposition	207
5.7. Trace	208
5.8. Vectorization	208
5.9. Blockwise addition	208
5.10. Blockwise multiplication	209
5.11. Hadamard product of partitioned matrices	209
5.12. Kronecker product of partitioned matrices	210
5.13. Elementary operations and elementary matrices	212
5.14. Inversion of partitioned matrices	214
5.14.1. Inversion of block-diagonal matrices	215
5.14.2. Inversion of block-triangular matrices	215
5.14.3. Block-triangularization and Schur complements	216
5.14.4. Block-diagonalization and block-factorization	216
5.14.5. Block-inversion and partitioned inverse	217
5.14.6. Other formulae for the partitioned 2×2 inverse	218
5.14.7. Solution of a system of linear equations	219
5.14.8. Inversion of a partitioned Gram matrix	220
5.14.9. Iterative inversion of a partitioned square matrix	220
5.14.10. Matrix inversion lemma and applications	221
5.15. Generalized inverses of 2×2 block matrices	222
5.16. Determinants of partitioned matrices	224
5.16.1. Determinant of block-diagonal matrices	224
5.16.2. Determinant of block-triangular matrices	225

5.16.3. Determinant of partitioned matrices with square diagonal blocks	225
5.16.4. Determinants of specific partitioned matrices	226
5.16.5. Eigenvalues of \mathbf{CB} and \mathbf{BC}	227
5.17. Rank of partitioned matrices	228
5.18. Levinson–Durbin algorithm	229
5.18.1. AR process and Yule–Walker equations	230
5.18.2. Levinson–Durbin algorithm	232
5.18.3. Linear prediction	237
Chapter 6. Tensor Spaces and Tensors	243
6.1. Chapter summary	243
6.2. Hypermatices	243
6.2.1. Hypermatrix vector spaces	244
6.2.2. Hypermatrix inner product and Frobenius norm	245
6.2.3. Contraction operation and n -mode hypermatrix–matrix product .	245
6.3. Outer products	249
6.4. Multilinear forms, homogeneous polynomials and hypermatrices . .	251
6.4.1. Hypermatrix associated to a multilinear form	251
6.4.2. Symmetric multilinear forms and symmetric hypermatrices . .	252
6.5. Multilinear maps and homogeneous polynomials	255
6.6. Tensor spaces and tensors	255
6.6.1. Definitions	255
6.6.2. Multilinearity and associativity	257
6.6.3. Tensors and coordinate hypermatrices	257
6.6.4. Canonical writing of tensors	258
6.6.5. Expansion of the tensor product of N vectors	260
6.6.6. Properties of the tensor product	261
6.6.7. Change of basis formula	266
6.7. Tensor rank and tensor decompositions	268
6.7.1. Matrix rank	268
6.7.2. Hypermatrix rank	268
6.7.3. Symmetric rank of a hypermatrix	269
6.7.4. Comparative properties of hypermatrices and matrices	269
6.7.5. CPD and dimensionality reduction	271
6.7.6. Tensor rank	273
6.8. Eigenvalues and singular values of a hypermatrix	274
6.9. Isomorphisms of tensor spaces	276
