|-------------------------------------------------------------------------------------------------------------------|----|
| <b>Introduction</b> . . . . .                                                                                     | ix |
| <b>Chapter 1. Company, Employees, Society and Technology</b> . . . . .                                            | 1  |
| 1.1. Introduction . . . . .                                                                                       | 1  |
| 1.2. Competitive spirit and modern management . . . . .                                                           | 7  |
| 1.3. The information revolution . . . . .                                                                         | 9  |
| 1.4. What about corporate spirit today? . . . . .                                                                 | 12 |
| 1.5. Max Weber and neo-dogmatism . . . . .                                                                        | 15 |
| 1.5.1. Adaptations and ecosocial constraints. . . . .                                                             | 15 |
| 1.5.2. Social strategies . . . . .                                                                                | 17 |
| 1.5.3. Social and environmental responsibility . . . . .                                                          | 20 |
| 1.6. Digital transition and managerial ideology . . . . .                                                         | 30 |
| 1.6.1. The new corporate spirit: a myth . . . . .                                                                 | 31 |
| 1.6.2. The actors, the network: when work becomes adjustment . . . . .                                            | 36 |
| <b>Chapter 2. Workplace Computerization Strategies and Neo-management</b> . . . . .                               | 39 |
| 2.1. Introduction . . . . .                                                                                       | 39 |
| 2.2. From telematics to management information systems . . . . .                                                  | 46 |
| 2.2.1. Digital relational and communication systems<br>as ideological drivers of hypermodern management . . . . . | 51 |
| 2.2.2. Sociology and telecommunications . . . . .                                                                 | 62 |
| 2.2.3. Control and self-control, a culture of keeping track . . . . .                                             | 67 |
| 2.3. Cognition and telecommunication . . . . .                                                                    | 73 |
| 2.3.1. The actor at work, acting in a network . . . . .                                                           | 77 |
| 2.3.2. A new truth regime for work. . . . .                                                                       | 80 |
| 2.4. Information and communication technologies, known as “ICT” . . . . .                                         | 83 |
| 2.4.1. Neo-management . . . . .                                                                                   | 85 |

|                                                                                                   |            |
|---------------------------------------------------------------------------------------------------|------------|
| 2.4.2. The employee and the manager . . . . .                                                     | 91         |
| 2.4.3. Institutionalization of management . . . . .                                               | 92         |
| 2.4.4. Newspeak and information and communication technologies . . . . .                          | 92         |
| <b>Chapter 3. Inria: Organizational and Structural Difficulties . . . . .</b>                     | <b>95</b>  |
| 3.1. Introduction . . . . .                                                                       | 95         |
| 3.2. Access to Inria . . . . .                                                                    | 99         |
| 3.2.1. Context of the survey . . . . .                                                            | 101        |
| 3.2.2. Employees . . . . .                                                                        | 103        |
| 3.2.3. Ecosystem 1: the DGDТ . . . . .                                                            | 105        |
| 3.2.4. Ecosystem 2: Cvstene . . . . .                                                             | 107        |
| 3.3. Eco-sociology, <i>eco-sociality</i> . . . . .                                                | 112        |
| 3.3.1. Dependencies between Cvstene and the DGDТ . . . . .                                        | 112        |
| 3.3.2. Geography . . . . .                                                                        | 113        |
| 3.3.3. Presentation of the cohort for each ecosystem . . . . .                                    | 114        |
| 3.3.4. Relationship crises . . . . .                                                              | 118        |
| 3.4. The DGDТ: new organization, new geographies . . . . .                                        | 118        |
| 3.4.1. Collective identities. . . . .                                                             | 118        |
| 3.4.2. Intermediate spaces of collective identities. . . . .                                      | 126        |
| 3.4.3. Individuality and the absence of groups. . . . .                                           | 137        |
| <b>Chapter 4. Struggling Ecosystems . . . . .</b>                                                 | <b>139</b> |
| 4.1. Conceptual approach from the perspective of hypermodernity . . . . .                         | 139        |
| 4.1.1. Emphasis on the theory of actors and its limitations<br>in the technological era . . . . . | 143        |
| 4.1.2. Constructing a typology of our subjects. . . . .                                           | 144        |
| 4.1.3. Sociology of uses of the hypermodern worker . . . . .                                      | 145        |
| 4.2. Neomanagement and mechanical difficulties . . . . .                                          | 146        |
| 4.2.1. Crises and emergencies. . . . .                                                            | 147        |
| 4.2.2. Management of the spirit of collaboration . . . . .                                        | 152        |
| 4.2.3. Change management and weaknesses. . . . .                                                  | 152        |
| 4.3. Source subjects of the groups. . . . .                                                       | 155        |
| 4.3.1. Individual personalities within groups . . . . .                                           | 156        |
| 4.3.2. Suffering and doubts . . . . .                                                             | 160        |
| 4.4. Organizational apparatus: membership and implementation<br>of the project . . . . .          | 161        |
| 4.5. Altered reality: managerial language and the subordination<br>of meaning. . . . .            | 163        |

|                             |     |
