Preface xi
Vlad Stefan BARBU and Nicolas VERGNE

Part 1. Markov and Semi-Markov Processes 1

Chapter 1. Variable Length Markov Chains, Persistent Random Walks: A Close Encounter 3
Peggy CÉNAC, Brigitte CHAUVIN, Frédéric PACCAUT and Nicolas POUYANNE

1.1. Introduction 3
1.2. VLMCs: definition of the model 6
1.3. Definition and behavior of PRWs 9
1.3.1. PRWs in dimension one 9
1.3.2. PRWs in dimension two 13
1.4. VLMC: existence of stationary probability measures 15
1.5. Where VLMC and PRW meet 19
1.5.1. Semi-Markov chains and Markov additive processes 19
1.5.2. PRWs induce semi-Markov chains 20
1.5.3. Semi-Markov chain of the α-LIS in a stable VLMC 22
1.5.4. The meeting point 23
1.6. References 27

Chapter 2. Bootstraps of Martingale-difference Arrays Under the Uniformly Integrable Entropy 29
Salim BOUZEBDA and Nikolaos LIMNIOS

2.1. Introduction and motivation 29
2.2. Some preliminaries and notation 30
2.3. Main results 35
2.4. Application for the semi-Markov kernel estimators 36

2.5. Proofs 41
2.6. References 45

Chapter 3. A Review of the Dividend Discount Model: From Deterministic to Stochastic Models 47
Guglielmo D'AMICO and Riccardo DE BLASIS

3.1. Introduction 47
3.2. General model 48
3.3. Gordon growth model and extensions 50
3.3.1. Gordon model 50
3.3.2. Two-stage model 51
3.3.3. H model 52
3.3.4. Three-stage model 52
3.3.5. N-stage model 53
3.3.6. Other extensions 53
3.4. Markov chain stock models 54
3.4.1. Hurley and Johnson model 54
3.4.2. Yao model 56
3.4.3. Markov stock model 57
3.4.4. Multivariate Markov chain stock model 61
3.5. Conclusion 64
3.6. References 65

Chapter 4. Estimation of Piecewise-deterministic Trajectories in a Quantum Optics Scenario 69
Romain AZAÏS and Bruno LEGGIO

4.1. Introduction 69
4.1.1. The postulates of quantum mechanics 69
4.1.2. Dynamics of open quantum Markovian systems 71
4.1.3. Stochastic wave function: quantum dynamics as PDPs 74
4.1.4. Estimation for PDPs 76
4.2. Problem formulation 77
4.2.1. Atom-field interaction 77
4.2.2. Piecewise-deterministic trajectories 78
4.2.3. Measures 80
4.3. Estimation procedure 80
4.3.1. Strategy 80
4.3.2. Least-square estimators 82
4.3.3. Numerical experiments 83
4.4. Physical interpretation 86
4.5. Concluding remarks 87
4.6. References 88

Chapter 5. Identification of Patterns in a Semi-Markov Chain 91
Brenda Ivette GARCIA-MAYA and Nikolaos LIMNIOS

5.1. Introduction 91
5.2. The prefix chain 93
5.3. The semi-Markov setting 94
5.4. The hitting time of the pattern 100
5.5. A genomic application 102
5.6. Concluding remarks 106
5.7. References 106

Part 2. Autoregressive Processes 109

Chapter 6. Time Changes and Stationarity Issues for Continuous Time Autoregressive Processes of Order *p* 111
Valérie GIRARDIN and Rachid SENOUSSI

6.1. Introduction 111
6.2. Basics 112
6.3. Stationary AR processes 114
6.3.1. Formulas for the two first-order moments 114
6.3.2. Examples 116
6.3.3. Conditions for stationarity of $\mathrm{CAR}_1(p)$ processes 118
6.4. Time transforms 125
6.4.1. Properties of time transforms 125
6.4.2. MS processes 131
6.5. Conclusion 132
6.6. Appendix 133
6.7. References 136

Chapter 7. Sequential Estimation for Non-parametric Autoregressive Models 139
Ouerdia ARKOUN, Jean-Yves BRUA and Serguei PERGAMENCHTCHIKOV

7.1. Introduction 139
7.2. Main conditions 141
7.3. Pointwise estimation with absolute error risk 142
7.3.1. Minimax approach 142
7.3.2. Adaptive minimax approach 144
7.3.3. Non-adaptive procedure 145
7.3.4. Sequential kernel estimator 148
7.3.5. Adaptive sequential procedure 151
7.4. Estimation with quadratic integral risk 153
7.4.1. Passage to a discrete time regression model 155
7.4.2. Model selection 159

7.4.3. Main results 161
7.5. References 164

Part 3. Divergence Measures and Entropies 167

Chapter 8. Inference in Parametric and Semi-parametric Models: The Divergence-based Approach 169
Michel BRONIATOWSKI

8.1. Introduction 169
8.1.1. Csiszár divergences, variational form 170
8.1.2. Dual form of the divergence and dual estimators in parametric models 172
8.1.3. Decomposable discrepancies 178
8.2. Models and selection of statistical criteria 183
8.3. Non-regular cases: the interplay between the model and the criterion 184
8.3.1. Test statistics 185
8.4. References 187

Chapter 9. Dynamics of the Group Entropy Maximization Processes and of the Relative Entropy Group Minimization Processes Based on the Speed-gradient Principle 189
Vasile PREDA and Irina BĂNCESCU

9.1. Introduction 190
9.1.1. The SG principle 191
9.1.2. Entropy groups 193
9.2. Group entropies and the SG principle 196
9.2.1. Total energy constraint 199
9.3. Relative entropy group and the SG principle 202
9.3.1. Equilibrium stability 205
9.3.2. Total energy constraint 205
9.4. A new (G, a) power relative entropy group and the SG principle 206
9.5. Conclusion 210
9.6. References 210

Chapter 10. Inferential Statistics Based on Measures of Information and Divergence 215
Alex KARAGRIGORIOU and Christos MESELIDIS

10.1. Introduction 215
10.2. Divergence measures 216
10.2.1. φ-Divergences 216
10.2.2. α-Divergences 217
10.2.3. Bregman divergences 218

10.3. Properties of divergence measures 219
10.4. Model selection criteria 220
10.5. Goodness of fit tests 222
10.5.1. Simple null hypothesis 222
10.5.2. Composite null hypothesis 223
10.6. Simulation study 227
10.7. References 231

Chapter 11. Goodness-of-Fit Tests Based on Divergence Measures for Frailty Models 235
Filia VONTA

11.1. Introduction 235
11.2. The proposed goodness-of-fit test 236
11.3. Main results 240
11.4. Frailty models 243
11.5. Simulations 244
11.5.1. Linear models for the estimation of critical values 247
11.5.2. Size of the test 248
11.6. References 250

List of Authors 253
