Introduction	ix
Chapter 1. Gaussian Processes	1
1.1. Gaussian variables	1
1.1.1. Chi-squared distribution	3
1.2. Gaussian vectors	3
1.2.1. Isserlis' theorem for Gaussian moments	7
1.2.2. Moments of quadratic and squared linear forms	10
1.3. Gaussian processes	13
1.3.1. Generalities on stochastic processes	13
1.3.2. Gaussian processes: definition and main properties	17
1.3.3. Existence of gaussian processes with prescribed covariance function	19
1.3.4. Nondegenerate Gaussian processes	24
1.4. Gaussian random measures and Wiener integration	26
1.4.1. Gaussian random measures	26
1.4.2. Brownian measure on $\mathbb{R}$	27
1.4.3. Space-time white noise	28
1.4.4. Gaussian random fields	28
1.4.5. Wiener integration: definitions and isometries	29
1.5. Exercises	31
Chapter 2. Key Fractional Gaussian Processes: Building Blocks for the Generalized Fractional Brownian Motion	35
2.1. Fractional Brownian motion	35
2.2. Odd fractional Brownian motion	38
2.3. Even fractional Brownian motion	42

2.4. Relationships between fractional, odd and even fractional Brownian motions	46
2.5. Key stochastic characteristics of odd and even fractional Brownian motions	48
2.5.1. Integral representations of covariance functions	54
2.6. Series expansions for odd, even and standard fractional Brownian motions (Dzhaparidze–van Zanten’s approach)	57
2.7. Exercises	60
Chapter 3. The Zili Generalized Fractional Brownian Motion: Definition and Core Properties	63
3.1. Definition and main stochastic properties	63
3.2. The increments study and some applications	72
3.2.1. Covariance structure of ZgfBm increments	81
3.3. Integral representation of the generalized fractional Brownian motion	86
3.4. Alternative expression via odd and even fractional Brownian motions	87
3.5. Exercises	91
Chapter 4. Parameter Estimation for the Generalized Fractional Brownian Motion	93
4.1. Estimation of the Hurst parameter H when a and b are known	93
4.1.1. Parameter estimation via squared increments: an asymptotic study	95
4.1.2. Estimators for the Hurst parameter H	105
4.2. Maximum likelihood estimation of a and b , when H is known	108
4.2.1. Estimating a and b when $a \neq b$ and $a \neq -b$	109
4.2.2. Special cases: when $a = b$ or $a = -b$	113
4.2.3. Asymptotic normality of $\hat{\alpha}^2$	115
4.3. Estimation of all three parameters (a, b, H)	117
4.4. Exercises	119
Chapter 5. Stochastic Calculus with Generalized Fractional Brownian Motion	123
5.1. Introduction	123
5.2. Useful ZgfBm’s characteristics	123
5.3. Stochastic integration with respect to ZgfBm when $\frac{1}{2} < H < 1$	133
5.3.1. Chain rule formula	135
5.3.2. The divergence operator	135
5.3.3. Divergence and symmetric integrals for ZgfBm	137
5.4. Itô formulas with ZgfBm	148
5.5. Examples of application	162

5.5.1. Example 1	162
5.5.2. Example 2	163
5.5.3. Example 3: generalized fractional Black–Scholes equation	164
5.6. Exercises	167
Chapter 6. Stochastic Partial Differential Equations	
Driven by a ZgfBm Noise	171
6.1. Introduction	171
6.2. The stochastic partial differential equation	172
6.2.1. The noise $W_{a,b,H}$	172
6.2.2. Wiener integrals with respect to $W_{a,b,H}$ and the transfer formula	173
6.3. Analysis of solution existence and characterization	178
6.3.1. Mild solution	178
6.3.2. Weak solution	181
6.3.3. Relationship between mild and weak solutions	182
6.3.4. Uniqueness of the weak solution	185
6.4. Further characterization of the mild solution	187
6.5. Regularity properties	190
6.5.1. Study of the regularity of the solution in time	190
6.5.2. Sharp regularity of the solution in space	195
6.6. Exercises	201
Appendix	203
