Introduction	xiii
Céline VACCHIANI-MARCUZZO and Denise PUMAIN	
 Part 1. Consolidating the Significance of Urban Scaling Laws	 1
 Chapter 1. Scaling Laws in Complex Systems Dynamics	 3
Denise PUMAIN	
1.1. Scaling laws: definition and interpretations	3
1.1.1. Definition of scaling laws	4
1.1.2. Interpretations derived from statistical physics	8
1.1.3. Interpretations incorporating social science theories	9
1.2. A difficult synthesis	13
1.3. Applications of scaling laws	16
1.3.1. Scaling laws and urban morphology	16
1.3.2. Scaling laws and the social and functional typology of cities . . .	18
1.3.3. Scaling laws and zones of influence around cities	19
1.3.4. Scaling laws and degree of development	19
1.3.5. Scaling laws and renormalization	20
1.4. Scaling laws: challenges for urban policy	20
1.4.1. Promoting the equitable distribution of urban services	21
1.4.2. Productivity and city size	21
1.4.3. Large and small cities in the ecological transition	23
1.5. Conclusion	23
1.6. References	25

Chapter 2. Epistemological and Critical Examination of Urban Scaling Laws.	35
Cécile TANNIER and Denise PUMAIN	
2.1. Introduction.	36
2.2. Concept of scale in urban geography.	36
2.2.1. Scale as a dimension of geographic objects.	37
2.2.2. Scale as a level of spatial organization of societies	40
2.3. Scale invariance of the rank-size distribution of cities and central place systems	46
2.3.1. Distribution of city size: a scaling law like any other?	47
2.3.2. Central place systems and their possible scale invariance	51
2.3.3. Attempts to reconcile the rank-size law of cities and central places theory	53
2.4. Scaling laws: theoretical challenges	55
2.4.1. Transition from transversal to longitudinal and the question of ergodicity	56
2.4.2. Poor integration of scaling laws into urban spatialities and temporalities	59
2.5. Practical issues still unresolved	60
2.5.1. Uncertainties related to the definition and delimitation of cities	60
2.5.2. Uncertainties related to statistical estimation methods	61
2.6. Conclusion	62
2.7. References	64
 Chapter 3. Generative Models of Hierarchical Systems of Cities: The Role of Individuals and Firms.	75
Cécile TANNIER	
3.1. Introduction.	75
3.2. Explanatory processes for the hierarchization of systems of cities	77
3.3. Intraurban agglomeration and competition processes explaining interurban hierarchies	79
3.4. Interurban hierarchies explained by the intensity and diversity of intraurban social interactions	80
3.4.1. Settlement scaling theory models	80
3.4.2. Models incorporating the diversity of intraurban economic and social activity.	85

3.5. City hierarchies and urban scaling laws resulting from migration or individual interurban interactions	87
3.5.1. Central place models	87
3.5.2. Models of the new economic geography	88
3.5.3. Altmann’s (2020) model	93
3.6. Properties of the modeled structures and dynamics	94
3.6.1. Fundamental role of space: an aspect that is more or less present in the models	95
3.6.2. Absence of historical (evolutionary) processes and interactions between levels in models	101
3.7. Conclusion	105
3.8. References	106

Chapter 4. Modeling Interactions Between Cities to Simulate Urban Hierarchies

Cécile TANNIER

4.1. Introduction.	115
4.2. Three categories of processes at work in the dynamics of systems of cities	117
4.2.1. Spatial interactions between cities	117
4.2.2. Functional specialization of cities and spatial division of labor	118
4.2.3. Hierarchical diffusion of innovations	121
4.2.4. Evolutionary theory of cities	121
4.3. Models.	123
4.3.1. So-called “parsimonious” models	123
4.3.2. Models closer to concepts and theories of social sciences	130
4.3.3. More complex models incorporating numerous empirically observed processes	137
4.4. Components of model dynamics	149
4.4.1. Role of space in the models	150
4.4.2. Role of demographic and economic changes.	151
4.4.3. Role of the diversity and diversification of functions and activities in cities	153
4.5. Conclusion	155
4.6. References	156

Part 2. Revisiting International Comparison of Urban Systems with Scaling Laws 165**Chapter 5. Urban Functions and Scaling Laws: South Africa, United States, France** 167

Céline VACCHIANI-MARCUZZO and Fabien PAULUS

5.1. Scaling laws to the test: a comparative analysis of South Africa, France and the United States	168
5.2. A hybrid system of cities between the new world and developing countries	169
5.3. Scaling laws and industry (economic sectors)	171
5.4. Exploration of occupations.	178
5.5. Conclusion	186
5.6. References	186

Chapter 6. Scaling Laws and Integration Dynamics in Cities of the European Union 191

Olivier FINANCE and Denise PUMAIN

6.1. Scaling laws and the diffusion of innovations	193
6.1.1. Urban growth or decline and the diffusion of innovations	193
6.1.2. Scaling laws and stages in the diffusion of innovation waves	199
6.2. Foreign investment flows into European cities	200
6.2.1. Quantitative selectivity of new investments and jobs	201
6.2.2. Variations in scaling laws across city activity sectors.	204
6.2.3. Source of investments	206
6.3. Scaling laws and indicators of metropolization.	207
6.4. Conclusion	209
6.5. References	209

Chapter 7. The Integration of Cities with Globalization, From 2010 to 2022, Through the Lens of Scaling Laws 215

Céline ROZENBLAT

7.1. Understanding the scaling laws of cities in multinational corporation networks	217
7.1.1. Integration of cities and systems of cities into multisectoral corporation networks.	217

7.1.2. Cities and multinational corporations in network	218
7.1.3. Cities in networks of different geographic scopes	218
7.1.4. City ranking and scaling laws	219
7.2. Contribution of scaling laws to understanding the processes of city integration into multinational corporation networks	223
7.3. Reliable database and rigorous methodology	224
7.3.1. Firms' ownership networks	225
7.3.2. Comparable cities defined as large urban regions	226
7.3.3. Data construction by city (LUR)	227
7.3.4. Number of companies as a measure of city size for calculating scaling laws based on enterprise networks	232
7.3.5. City rankings based on company concentration	233
7.4. Scaling laws for cities based on multinational enterprise networks . . .	235
7.4.1. The scaling laws of cities at the global level for multinational enterprise links and their orientations	235
7.4.2. Scaling the laws of cities by the scope of multinational enterprise links at the global level	237
7.4.3. Scaling laws of cities by the scope of multinational enterprise links at the continental level	238
7.4.4. Scaling laws of cities based on their multinational enterprise links by industry	239
7.5. Network properties in urban systems revealed by scaling laws	243
7.5.1. Strength of local links	243
7.5.2. Advantages of diversity	244
7.5.3. Concentration of power	246
7.5.4. Differentiated regimes between the center and the periphery? . .	246
7.5.5. Scaling laws revealing the diffusion of benefits from business concentration in cities.	248
7.6. Conclusion	249
7.7. References	250
Part 3. Scaling Laws to Better Characterize Urban Forms	255
Chapter 8. Intra-Urban Radial Scaling Laws	257
Justin DELLOYE, Estelle MENNICKEN, Paul KILGARRIFF, Rémi LEMOY and Geoffrey CARUSO	
8.1. Introduction.	257
8.2. Literature and definitions.	259

8.3. Radial approach: concept and empirical measurements	261
8.4. Results.	265
8.5. Discussion and conclusion	270
8.6. References	271

Chapter 9. A Method to Define Multiscalar Systems of Cities in France

Florent LE NÉCHET, Benoît CONTI and Sylvestre DUROUDIER

9.1. Introduction.	275
9.2. Mobility dynamics and functional interpretations of urbanized spaces	277
9.2.1. Functional areas sometimes lose coherence	277
9.2.2. What frameworks can be used to understand everyday relations between cities?	280
9.2.3. The challenge of multiscalar analysis on the functioning of urban spaces	281
9.3. Proposal for an original method for analyzing the existence of “multiscalar” urban systems	282
9.3.1. Choice of a parametric algorithm for exploratory purposes	282
9.3.2. Description of the first iteration and outputs of the algorithm . .	283
9.3.3. Two examples of primitive and CUS construction	285
9.3.4. Characterization of the diversity of organizational forms and degrees of multiscalarity in CUSs	287
9.4. Diversity in the spatial organization of urban systems in France	289
9.4.1. National analysis of the role of the α parameter in the construction of CUSs	289
9.4.2. CUSs to multiscalar consolidated urban systems	294
9.4.3. Test on typology of MCUSs for $\alpha = 4\%$	295
9.4.4. Analysis of multiscalarity by the morphological organization of the 24 MCUSs ($\alpha = 4\%$)	299
9.4.5. Typology of city multiscalarity	301
9.5. Conclusion	305
9.6. References	306

Conclusion. What Role will Scaling Laws Play in the Future of Cities?	311
