Preface	xi
Allan Sacha BRUN	
Acknowledgments	xv
Note to the Readers	xvii
Chapter 1. Internal Structure and Fundamental Properties of the Sun	1
Allan Sacha BRUN	
1.1. Reader digest of solar basic properties	1
1.2. Main stellar equilibria and time scales	6
1.2.1. Hydrostatic and thermal equilibria	6
1.2.2. Free fall, nuclear and Kelvin–Helmoltz timescales	7
1.2.3. Virial theorem for stars	9
1.3. Solar internal structure	11
1.3.1. A first model of stellar structure: the Lane–Emden equation . . .	11
1.3.2. Convective envelope	14
1.3.3. Radiative zones and nuclear core	21
1.3.4. Stellar structure equations	36
1.4. Solar properties evolution	42
1.5. Basics of helioseismology	45
1.5.1. Oscillation equations	47
1.5.2. Eigenmodes	52
1.5.3. Reference seismically calibrated solar structure model	62
1.6. Chemical abundances	63
1.7. <i>Go beyond</i> : non-classical secular stellar evolution	66

1.8. Exercises	70
1.9. References	73
Chapter 1 summary	80
Chapter 2. Magnetohydrodynamics of the Solar Interior	81
Allan Sacha BRUN, Antoine STRUGAREK and Nadège MEUNIER	
2.1. Dynamics of the solar interior and surface	81
2.1.1. Observation techniques	82
2.1.2. Large-scale flows of the Sun	85
2.1.3. Many scales of convection	89
2.1.4. Many scales of magnetism, 11 years and Gleissberg cycles, Hale law, Maunder minimum	90
2.2. Magnetohydrodynamics equations	96
2.2.1. General context	96
2.2.2. Hydrodynamics equations	98
2.2.3. Maxwell equations	101
2.2.4. Induction equation	102
2.2.5. Basic principles of turbulence in fluid and plasmas	106
2.2.6. Magnetohydrodynamics equations	116
2.3. Dynamo action	124
2.3.1. Dynamo action: basic principles, parity, dynamo families, fast and slow dynamo and energetics	125
2.3.2. Mean field dynamo equations	131
2.3.3. Solar kinematic dynamo models	132
2.3.4. 3-D nonlinear convective dynamos of the Sun	146
2.3.5. Mean field interpretation of 3-D MHD dynamos	170
2.3.6. Dynamo and instabilities in stellar radiative zones	172
2.4. Forecasting solar 11-year cycles	175
2.4.1. Should we expect to be able to forecast the solar 11-year cycle?	175
2.4.2. Some attempts to forecast the solar 11-year cycle	177
2.5. <i>Go beyond</i> : convective conundrum	181
2.6. Exercises	184
2.7. References	187
Chapter 2 summary	202
Chapter 3. Solar Surface Activity and Magnetic Flux Emergence	205
Allan Sacha BRUN and Nadège MEUNIER	
3.1. Flux emergence and removal phenomena and their observational signatures	206
3.1.1. Imaging at various altitudes in the solar atmosphere	209
3.1.2. Spectropolarimetry	212

3.1.3. Doppler and local helioseismology	212
3.2. General overview of active regions	213
3.2.1. Active regions	213
3.2.2. Global overview of sunspots	214
3.2.3. High spatial resolution dynamics in spots	217
3.3. Flux emergence observations	220
3.3.1. General evolution	220
3.3.2. Statistical laws	220
3.3.3. Sunspot models	222
3.4. Flux emergence simulations	226
3.4.1. Basic concepts of magnetic buoyancy and magnetic buoyancy instability	226
3.4.2. Twist and writhe, magnetic helicity	231
3.4.3. Flux emergence experiments: thin and thick flux tubes and Ω -loop	235
3.5. From active regions to the quiet Sun	242
3.5.1. Faculae and decay into the magnetic network	242
3.5.2. Intranetwork fields	242
3.6. Solar surface dynamics simulations	244
3.6.1. SFT models	244
3.6.2. Global 3-D kinematic flux transport dynamo models	247
3.7. <i>Go beyond</i> : coupled dynamo and flux emergence: spotless dynamo paradox	249
3.8. Exercises	250
3.9. References	253
Chapter 3 summary	260

Chapter 4. Solar Eruptive Events and Lower Atmosphere Dynamics 261

Miho JANVIER, Antoine STRUGAREK and Allan Sacha BRUN

4.1. The solar chromosphere	261
4.2. Magnetic field extrapolation	265
4.2.1. Magnetic field extrapolation: potential fields	265
4.2.2. Extrapolations under the hypothesis of force-freeness	267
4.2.3. Non-force free extrapolations	272
4.3. Magnetic reconnection	272
4.3.1. Current sheets	274
4.3.2. Sweet–Parker model	277
4.3.3. Petschek model	280
4.3.4. Tearing instability	280
4.3.5. Collisionless reconnection	283
4.3.6. 3-D null points, QSLs	286

4.4. Solar flares	289
4.4.1. Multi-wavelengths signature of flares and classifications	290
4.4.2. Phenomenology of flares	295
4.4.3. Flare model in 3-D	300
4.4.4. Self-similarity of flares	302
4.5. <i>Go beyond</i> : quasi-periodic pulsations (QPPs) in solar flares	303
4.6. Exercises	306
4.7. References	308
Chapter 4 summary	316

**Chapter 5. Properties and Dynamics of the Solar Corona,
Wind and Heliosphere 317**

Antoine STRUGAREK, Miho JANVIER, Allan Sacha BRUN and Barbara PERRI

5.1. The solar corona: basic properties	318
5.1.1. Main components of the solar corona	319
5.1.2. Plasma and magnetic properties of the solar corona	321
5.1.3. Static models of the solar corona and their limitation	327
5.1.4. Potential magnetic field approximation	328
5.2. A dynamical out-flowing solar corona: the solar wind	330
5.2.1. Structure of the solar corona: from the Parker wind to the Parker spiral	331
5.2.2. The fast and the slow solar wind	340
5.2.3. Turbulence in the solar wind	344
5.2.4. Advanced 3-D models of solar and stellar winds	346
5.3. Coronal mass ejections: description and dynamics	347
5.3.1. The evolution of CME observations	347
5.3.2. Substructures of interplanetary CMEs	350
5.3.3. Radial evolution of CMEs/ICMEs	356
5.3.4. Recent advances in understanding ICME propagation	359
5.4. Shocks and contact discontinuities in the solar wind	360
5.4.1. Rankine–Hugoniot conditions for discontinuities and shocks	360
5.4.2. CIRs/SIRs versus CME shocks	362
5.5. Heliosphere	364
5.6. <i>Go beyond</i> : missing solar magnetic flux	372
5.7. Exercises	374
5.8. References	378
Chapter 5 summary	387

**Chapter 6. Sun–Earth Relationships and Space
Weather Operations 389**

Barbara PERRI, Allan Sacha BRUN and Antoine STRUGAREK

6.1. A brief presentation of the Earth system	389
6.1.1. Earth’s many inner layers	393

6.1.2. Earth's many outer layers	398
6.1.3. Earth varying outer conducting conditions and particles population	404
6.1.4. Earth's atmospheric and oceanic motions	408
6.2. Magnetosphere	414
6.2.1. Origin, size and shape of the magnetosphere	414
6.2.2. Current systems in the magnetosphere of the Earth	419
6.3. Interactions between an active Sun and its environment	421
6.3.1. Diversity of Sun–Earth interaction	421
6.3.2. Propagation of transients in the interplanetary medium	427
6.3.3. Space weather events measured at Earth	429
6.3.4. Space weather for other planets in the solar system	436
6.4. Organizing space weather mitigation response	438
6.4.1. Technological impact on our society	439
6.4.2. Challenges of real-time surveillance	442
6.5. <i>Go beyond</i> : numerical forecasting of space weather	445
6.6. Exercises	447
6.7. References	450
Chapter 6 summary	456
Chapter 7. Wind Braking and its Link to Solar Rotational History and Gyrochronology	459
Antoine STRUGAREK and Allan Sacha BRUN	
7.1. Astrophysical context	459
7.2. Rotational evolution of Sun-like stars	460
7.2.1. Observations of rotation rates of Sun-like stars	461
7.2.2. Using rotation as a probe for age and stellar wind physics	463
7.3. Computing the torque in the solar wind	465
7.4. Models for rotational evolution of solar-mass stars	469
7.4.1. Two layers stellar rotation model	469
7.4.2. Stellar core-envelope coupling: basic concepts	474
7.4.3. Stellar cluster models	476
7.5. <i>Go beyond</i> : break of gyrochronology	477
7.6. Exercises	479
7.7. References	481
Chapter 7 summary	486
Chapter 8. The Solar-Stellar Connection	487
Nadège MEUNIER, Allan Sacha BRUN, Antoine STRUGAREK and Barbara PERRI	
8.1. Some basics of stellar physics: linking solar and stellar magnetism . . .	487
8.2. Key observational techniques for stellar rotation and magnetism	494
8.2.1. Direct information on magnetic field properties	495

8.2.2. Spectral activity indexes	500
8.2.3. Photometric light curves	505
8.2.4. Asteroseismology	506
8.3. Large-scale flows versus mass and rotation	507
8.3.1. Differential rotation	507
8.3.2. Meridional circulation	513
8.4. Stellar cycles and dynamo action	516
8.4.1. Modeling of stellar cycles: theoretical approach and stellar dynamoes	516
8.4.2. Observational results	522
8.4.3. Comparisons	529
8.5. Stellar flares, winds and astrospheres	531
8.5.1. Stellar flares and superflares	531
8.5.2. Observing stellar winds, mass loss and astrospheres	534
8.5.3. Modeling astrospheres	539
8.5.4. Exo-space weather	542
8.6. <i>Go beyond</i> : spot versus faculae and average activity level	550
8.7. Exercises	552
8.8. References	554
Chapter 8 summary	567
Appendix	569
A.1. Main physical and astrophysical constants	569
A.2. Symbols and adimensional numbers definition	570
A.2.1. Symbols	570
A.3. Adimensional numbers	571
A.4. Useful mathematical formula	572
A.4.1. Vector identities	572
A.5. Differential operator in spherical coordinates	573
A.6. Useful solar and space weather web links	575
A.7. Acronyms	576
List of Authors	581
Index	583
