Introduction	xi
Notations and Acronyms	xv
Chapter 1. General Considerations	1
1.1. General information	1
1.1.1. Definitions	1
1.1.2. Need and power flow	3
1.1.3. Actuation functions	5
1.1.4. Actuation needs and constraints	10
1.1.5. Classification and regulatory framework	17
1.1.6. Development cycle	21
1.2. Primary and secondary power transmission functions for actuators.	24
1.2.1. Primary functions	25
1.2.2. Secondary functions	27
1.2.3. Signal approach and power approach	29
1.2.4. Types of actuators.	29
Chapter 2. Reliability	35
2.1. Risks and risk acceptance	35
2.2. Dependability	39
2.2.1. Fault to failure.	40
2.2.2. Fight against failures	41
2.3. Response to failure for aerospace actuators	42
2.3.1. Resistance to failure	42
2.3.2. Tolerance to failure	43
2.3.3. Examples	45

2.4. Redundancy	47
2.4.1. Static redundancy	50
2.4.2. Dynamic redundancy	53
2.5. Combination of redundancy principles	57
2.6. Feared events and failure rates in actuation	58
2.7. Fundamentals of reliability calculation	58
2.7.1. Variables used in reliability calculation	59
2.7.2. Generic failure rate models	62
2.7.3. Reliability of element associations	64
2.8. References and short glossary pertaining to reliability	67
Chapter 3. General Concepts for Hydraulic Power Solutions	69
3.1. Hydraulic power actuation	69
3.1.1. Units and reference values	69
3.1.2. Energy transport by a liquid	70
3.1.3. Historical evolution of power and pressure use	74
3.2. Potential advantages and disadvantages of hydraulic technology	80
3.2.1. Advantages	80
3.2.2. Disadvantages	82
3.3. Architectural concepts	84
3.3.1. Power architecture for hydraulic actuation	84
3.3.2. Design rules and recommendations	85
Chapter 4. Hydraulic Fluid and Its Conditioning	91
4.1. Needs, constraints and evolutions	91
4.1.1. Opportunities and constraints in hydrostatic power transmission	91
4.1.2. Range of operational temperature and fire resistance	93
4.2. Actual hydraulic fluid	97
4.2.1. Physical properties	99
4.3. Fluid conditioning	101
4.3.1. Fluid in sufficient quantity	101
4.3.2. Avoid gas pollution and cavitation	103
4.3.3. Isolation of solid pollution	104
4.3.4. Thermal management	108
4.3.5. External leakage collection	112
4.3.6. Monitoring and maintaining the fluid in working conditions	112
4.3.7. Impact on the design and operation of hydraulic systems	114
4.4. Energy phenomena caused by the fluid	119
4.4.1. Hydraulic resistance	119
4.4.2. Hydraulic capacitance	120
4.4.3. Hydraulic inertia	122
4.4.4. Speed of sound in the hydraulic fluid	122

Chapter 5. Hydromechanical Power Transformation	123
5.1. General considerations	123
5.2. Functional perspective.	129
5.3. Technological shortcomings	130
5.3.1. Energy losses	130
5.3.2. Compressibility of the hydraulic fluid	134
5.3.3. Wall deformation	134
5.3.4. Pulsations	134
5.3.5. Charging	136
5.3.6. Drainage	136
5.4. Pump driving	137
5.4.1. Driving performed by main engines: engine-driven pump	138
5.4.2. Driving performed by an electric motor: electric motor pump (EMP) or alternative current motor pump (ACMP)	139
5.4.3. Driving performed by a hydraulic motor: PTU.	140
5.4.4. Driving performed by dynamic air: ram air turbine or air-driven pump	141
5.4.5. Driving performed by a gas turbine: solid propellant gas generator or monofuel emergency power unit (MEPU)	142
5.4.6. Blow-down fluid pressurization	144
5.5. Hydraulic motors	144
Chapter 6. Power Metering in Hydraulics	147
6.1. Metering principles	147
6.2. Power-on-demand	150
6.2.1. Energy losses at partial power	150
6.2.2. Metering by pump drive adjustment.	151
6.2.3. Metering by displacement adjustment.	152
6.2.4. Closed hydraulic circuit, open hydraulic circuit	158
6.3. Metering by hydraulic restriction.	159
6.3.1. Functional configuration	160
6.3.2. Types of distribution	165
6.4. Impact of restriction configuration and properties on the metering function	167
6.4.1. Fixed hydraulic restriction	167
6.4.2. Variable hydraulic restriction	170
6.5. Servovalves.	186
6.5.1. Architecture	186
6.5.2. Incremental improvements of servovalve performances.	189
6.5.3. Power supply of the electromagnetic motor	191

6.5.4. Pilot stages concepts	191
6.5.5. Functional bias	198
6.5.6. Direct drive valve	199
6.5.7. Application to wheel braking	203
Chapter 7. Power Distribution and Management in Hydraulics	207
7.1. Power distribution and management	207
7.2. Providing power	209
7.2.1. Transporting fluid	209
7.2.2. Isolating	213
7.2.3. Sequencing user power supplies	215
7.2.4. Merging sources	216
7.2.5. Sharing sources	217
7.2.6. Storing/restoring energy	219
7.2.7. Adjusting the pressure level	222
7.3. Protecting	223
7.3.1. Protecting against overpressure/overload	223
7.3.2. Protecting against cavitation and outgassing	226
7.3.3. Protecting against overconsumption	228
7.4. Managing the load	230
7.4.1. Locking the load in position	231
7.4.2. Ensuring irreversibility	231
7.4.3. Releasing the load	232
7.4.4. Damping the load	234
7.5. Monitoring	238
Chapter 8. Architectures and Geometric Integration	239
8.1. Introduction	239
8.2. Arrangement of actuation functions	239
8.3. Architectures and routing	241
8.3.1. Architectures of power networks	241
8.3.2. Routing of power networks	250
8.3.3. Architecture of actuators	250
8.4. Integration of components and equipment	259
8.4.1. In-line integration	259
8.4.2. Manifold integration	260
8.4.3. Sub-system integration	263
8.5. Integration of actuators in the airframe	265
8.5.1. Controls	265
8.5.2. Structural integration	268
