Introduction	ix
Chapter 1. Diagnosis of Electrical Machines by External Field Measurement	1
Remus PUSCA, Eric LEFEVRE, David MERCIER, Raphael ROMARY and Miftah IRHOUMAH	
1.1. Introduction	1
1.2. Extracting indicators from the external magnetic field	3
1.2.1. External field classification	3
1.2.2. Attenuation of the transverse field	5
1.2.3. Measurement of the transverse field	6
1.2.4. Modeling a healthy machine	8
1.2.5. Modeling a faulty machine	10
1.2.6. Effect of the load	13
1.3. Information fusion to detect the inter-turn short-circuit faults	16
1.3.1. Belief function theory: basic concepts	17
1.3.2. Fault detection with the fusion method	19
1.3.3. Calculation example	21
1.4. Application	25
1.4.1. Presentation of rotating electrical machines	25
1.4.2. Presentation of experimental results	28
1.5. Conclusion	33
1.6. References	33

Chapter 2. Signal Processing Techniques for Transient Fault Diagnosis	37
José Alfonso Antonino DAVIU and Roque Alfredo Osornio RIOS	
2.1. Introduction	37
2.2. Fault detection via motor current analysis	41
2.2.1. Classical tools (MCSA)	41
2.2.2. New techniques based on transient analysis (ATCSA)	45
2.3. Signal processing tools for transient analysis	47
2.3.1. Example of a discrete tool: the DWT	48
2.3.2. Example of a continuous tool: the HHT	54
2.4. Application of transient-based tools for electric motor fault detection	67
2.4.1. Application of the DWT for the detection of rotor damage	68
2.4.2. Application of the HHT for the detection of rotor damage	70
2.5. Conclusions	71
2.6. References	72
Chapter 3. Accurate Stator Fault Detection in an Induction Motor Using the Symmetrical Current Components	77
Monia BOUZID and Gérard CHAMPENOIS	
3.1. Introduction	77
3.2. Study of the SCCs behavior in an IM under different stator faults	79
3.2.1. Simulation study	79
3.2.2. Analytical study of the SCCs in an IM under different stator faults	86
3.3. Extracting stator fault indicators from an IM	97
3.4. Automatic and accurate detection and diagnosis of stator faults	98
3.4.1. Description of the monitoring system of the IM operating state	98
3.4.2. Improving the accuracy of incipient stator fault detection	99
3.4.3. Automatic incipient stator fault diagnosis in an IM	114
3.5. Conclusion	118
3.6. References	119

Chapter 4. Bearing Fault Diagnosis in Rotating Machines . .	123
Claude DELPHA, Demba DIALLO, Jinane HARMOUCHE, Mohamed BENBOUZID, Yassine AMIRAT and Elhoussin ELBOUCHIKHI	
4.1. Introduction	124
4.1.1. Bearing fault detection and diagnosis overview	124
4.1.2. Problem statement and proposal	128
4.2. Method description	130
4.2.1. The global spectral analysis description	130
4.2.2. Discrimination of faults in the bearing balls using LDA . .	133
4.3. Experimental data	135
4.3.1. Experimental test bed description	135
4.3.2. Time-domain detection	137
4.4. Global spectra bearing diagnosis	139
4.4.1. Data preprocessing	139
4.4.2. Global spectra results with PCA	141
4.4.3. Global spectra results with LDA	143
4.5. Conclusion	146
4.6. References	147
Chapter 5. Diagnosis and Prognosis of Proton Exchange Membrane Fuel Cells	153
Zhongliang LI, Zhixue ZHENG and Fei GAO	
5.1. Introduction	153
5.2. PEMFC functioning principle and development status	154
5.2.1. From a PEMFC to a PEMFC system	154
5.2.2. Current status of the PEMFC technology	156
5.3. Faults and degradation of PEMFCs	157
5.3.1. Degradation related to the aging effects	157
5.3.2. Degradation related to system operations	158
5.3.3. Variables used for PEMFC degradation evaluation	161
5.4. PEMFC diagnostic methods	165
5.4.1. Model-based diagnostic methods	165
5.4.2. Data-driven diagnostic methods	168
5.4.3. Case study	171
5.5. Prognosis of PEMFCs	180
5.5.1. Health index and EoL	181
5.5.2. Model-based prognostic methods	182
5.5.3. Data-driven and hybrid prognostic methods	184
5.5.4. Case study	186
5.6. Remaining challenges	193
5.7. References	194
