<b>Preface</b> . . . . .	xi
<b>Chapter 1. Total Synthesis: Some Elements to Contemplate</b> . . . . .	1
1.1. Total synthesis – why and for what purpose? . . . . .	1
1.2. The different approaches . . . . .	3
1.3. Efficiency, selectivity . . . . .	7
1.4. The essential reactions . . . . .	9
1.5. Towards a sustainable total synthesis . . . . .	11
1.6. What about tomorrow? . . . . .	12
1.7. References . . . . .	12
<b>Chapter 2. Squamostolide</b> . . . . .	21
2.1. Structure, isolation and properties . . . . .	21
2.2. Bond disconnections. . . . .	21
2.3. Approach according to M.J. Wu . . . . .	23
2.3.1. Bond disconnections . . . . .	23
2.3.2. Synthesis. . . . .	24
2.3.3. Key reaction: Claisen–Ireland rearrangement . . . . .	27
2.3.4. Key reaction: functionalization of true alkynes . . . . .	29
2.3.5. Supporting synthetic transformations . . . . .	31
2.4. Approach according to K.J. Quinn . . . . .	33
2.4.1. Bond disconnections . . . . .	33
2.4.2. Synthesis. . . . .	34
2.4.3. Key reaction: alkene metathesis and tandem processes . . . . .	37
2.4.4. Supporting synthetic transformations . . . . .	43
2.5. References . . . . .	44

<b>Chapter 3. Rubrenolide</b> . . . . .	51
3.1. Structure, isolation and properties . . . . .	51
3.2. Disconnections . . . . .	52
3.3. Approach according to H. Fujioka . . . . .	53
3.3.1. Disconnection . . . . .	53
3.3.2. Synthesis, developed by the Fujioka group . . . . .	54
3.3.3. Key reaction: iodoetherification . . . . .	56
3.3.4. Key reaction: oxidation of aldehydes to carboxylic acids . . . . .	57
3.3.5. Supporting synthetic transformations . . . . .	58
3.4. Approach according to B. Zwanenburg . . . . .	59
3.4.1. Retrosynthesis . . . . .	59
3.4.2. Synthesis, Zwanenburg's approach . . . . .	60
3.4.3. Key reaction: Wolff rearrangement . . . . .	62
3.4.4. Key reaction: dehydration of alcohols according to Grieco . . . . .	63
3.4.5. Supporting synthetic transformations . . . . .	64
3.5. Approach according to N. Kommu . . . . .	65
3.5.1. Disconnections . . . . .	65
3.5.2. Synthesis . . . . .	66
3.5.3. Key reaction: diastereoselective alkylation of oxazolidinones . . . . .	68
3.5.4. Key reaction: enantioselective reduction of ketones – CBS method . . . . .	71
3.5.5. Key reaction: alkyne formation according to Ohira–Bestmann . . . . .	73
3.5.6. Supporting synthetic transformations . . . . .	74
3.6. References . . . . .	75
<b>Chapter 4. Bipinnatin J</b> . . . . .	81
4.1. Structure, isolation and properties . . . . .	81
4.2. Disconnections . . . . .	82
4.3. Approach according to D. Trauner ( <i>racemic synthesis</i> ) . . . . .	83
4.3.1. Synthesis . . . . .	83
4.3.2. Key reaction: ene reaction between alkynes and alkenes . . . . .	86
4.3.3. Key reaction: Stille coupling . . . . .	88
4.3.4. Key reaction: Nozaki–Hiyama–Kishi reaction . . . . .	90
4.3.5. Supporting synthetic transformations . . . . .	93
4.4. Approach according to V.H. Rawal . . . . .	94
4.4.1. Synthesis . . . . .	94
4.4.2. Key reaction: Negishi coupling . . . . .	97
4.4.3. Supporting synthetic transformations . . . . .	98
4.5. Enantioselective approach according to G. Pattenden . . . . .	99
4.5.1. Synthesis . . . . .	99
4.5.2. Supporting synthetic transformations . . . . .	102
4.6. Approach according to D. Trauner – enantioselective version . . . . .	102
4.6.1. Synthesis . . . . .	102

---

4.6.2. Supporting synthetic transformations . . . . .	105
4.7. Comparison of the four syntheses . . . . .	106
4.8. References . . . . .	107
<b>Chapter 5. Tubingensin B</b> . . . . .	<b>111</b>
5.1. Structure, isolation and properties . . . . .	111
5.2. Bond disconnections. . . . .	112
5.3. Approach according to N.K. Garg . . . . .	113
5.3.1. Bond disconnections . . . . .	113
5.3.2. Synthesis. . . . .	114
5.3.3. Key reaction: Sonogashira reaction . . . . .	116
5.3.4. Key reaction: Suzuki coupling. . . . .	118
5.3.5. Key reaction: cycloaddition [2+2] of arynes . . . . .	120
5.3.6. Key reaction: radical cyclization and Baldwin's rules. . . . .	122
5.3.7. Key reaction: enantioselective hydrogenation of ketones . . . . .	122
5.3.8. Supporting synthetic transformations . . . . .	124
5.4. References . . . . .	125
<b>Chapter 6. Polygonatine A</b> . . . . .	<b>127</b>
6.1. Structure, isolation and properties . . . . .	127
6.2. Disconnections. . . . .	127
6.3. Synthesis according to S.M. Allin . . . . .	128
6.3.1. Disconnection . . . . .	128
6.3.2. Synthesis. . . . .	129
6.3.3. Key reaction: radical cyclization of selenoesters. . . . .	130
6.3.4. Supporting synthetic transformations . . . . .	133
6.4. Synthesis by J.P. Michael. . . . .	133
6.4.1. Disconnections . . . . .	133
6.4.2. Synthesis. . . . .	134
6.4.3. Key reaction: Vilsmeier–Haack–Arnold reaction . . . . .	135
6.4.4. Supporting synthetic transformations . . . . .	137
6.5. References . . . . .	139
<b>Chapter 7. (+)-Intricatetraol</b> . . . . .	<b>143</b>
7.1. Structure, isolation and properties . . . . .	143
7.2. Disconnections. . . . .	143
7.3. Approach according to Morimoto . . . . .	145
7.3.1. Synthesis. . . . .	145
7.3.2. Key reaction: epoxidation according to Katsuki–Sharpless . . . . .	149
7.3.3. Key reaction: asymmetric epoxidation according to Shi. . . . .	151
7.3.4. Supporting synthetic transformations . . . . .	153
7.4. References . . . . .	155

<b>Chapter 8. Enigmazole A</b> . . . . .	159
8.1. Structure, isolation and properties . . . . .	159
8.2. Disconnections . . . . .	160
8.3. Approach according to T. Molinski . . . . .	160
8.3.1. Disconnections . . . . .	160
8.3.2. Synthesis . . . . .	161
8.3.3. Key reaction: 1,2-enantioselective addition of dialkylzinc to aldehydes . . . . .	166
8.3.4. Key reaction: reduction of $\beta$ -aldols to 1,3-diols . . . . .	168
8.3.5. Supporting synthetic transformations . . . . .	169
8.4. Approach according to A. Fürstner . . . . .	172
8.4.1. Disconnections . . . . .	172
8.4.2. Synthesis . . . . .	173
8.4.3. Key reaction: diastereoselective alkylation according to Myers . . . . .	177
8.4.4. Key reaction: Yne-yne ring-closing metathesis (RCAM) . . . . .	179
8.4.5. Key reaction: sigmatropic rearrangement [3,3] of propargyl esters . . . . .	180
8.4.6. Supporting synthetic transformations . . . . .	181
8.5. Approach according to A.B. Smith III . . . . .	183
8.5.1. Disconnections . . . . .	183
8.5.2. Synthesis . . . . .	183
8.5.3. Key reaction: dithiane, umpolung and relayed reactions . . . . .	189
8.5.4. Key reaction: Petasis–Ferrier rearrangement . . . . .	191
8.5.5. Supporting synthetic transformations . . . . .	191
8.6. Approach according to H. Fuwa . . . . .	194
8.6.1. Disconnections . . . . .	194
8.6.2. Synthesis . . . . .	195
8.6.3. Key reaction: Tishchenko–Evans reaction . . . . .	199
8.6.4. Key reaction: Meyer–Schuster and Rupe rearrangement . . . . .	201
8.6.5. Supporting synthetic transformations . . . . .	203
8.7. Comparative assessment of the different syntheses . . . . .	205
8.8. References . . . . .	206
<b>Chapter 9. Biyouyanagin A</b> . . . . .	213
9.1. Structure, isolation and properties . . . . .	213
9.2. Synthesis according to K.C. Nicolaou . . . . .	214
9.2.1. Disconnections . . . . .	214
9.2.2. Synthesis . . . . .	215
9.2.3. Key reaction: 1,4-addition and organocatalysis . . . . .	220
9.2.4. Shapiro reaction . . . . .	222
9.2.5. Supporting synthetic transformations . . . . .	225
9.3. References . . . . .	229

---

<b>Chapter 10. Elatol</b> . . . . .	233
10.1. Structure, isolation and properties . . . . .	233
10.2. Disconnections . . . . .	234
10.3. Approach according to B. Stoltz . . . . .	234
10.3.1. Disconnections. . . . .	234
10.3.2. Synthesis . . . . .	235
10.3.3. Key reaction: Tsuji–Trost reaction. . . . .	237
10.3.4. Key reaction: ring-closing metathesis of hindered olefins . . . . .	241
10.3.5. Key reaction: reduction of enones according to Luche. . . . .	242
10.3.6. Supporting synthetic diagrams . . . . .	243
10.4. References . . . . .	245
<b>Chapter 11. Thiomarinol H</b> . . . . .	249
11.1. Structure, isolation and properties . . . . .	249
11.2. Disconnections . . . . .	250
11.3. Approach according to D.G. Hall . . . . .	250
11.3.1. Disconnections. . . . .	250
11.3.2. Synthesis . . . . .	252
11.3.3. Key reaction: hetero-Diels–Alder enantioselective reaction . . . . .	254
11.3.4. Supporting synthetic transformations . . . . .	256
11.4. Approach according to <i>S. Raghavan</i> . . . . .	258
11.4.1. Disconnections. . . . .	258
11.4.2. Synthesis . . . . .	260
11.4.3. Key reaction: Kirmse–Doyle rearrangement . . . . .	262
11.4.4. Key reaction: Julia–Lythgoe and Julia–Kocienski reaction . . . . .	264
11.4.5. Supporting synthetic transformations . . . . .	268
11.5. References . . . . .	270
<b>Chapter 12. Oblongolides A and C</b> . . . . .	273
12.1. Structures, isolation and properties . . . . .	273
12.2. Disconnections . . . . .	274
12.3. Synthesis of oblongolide A according to Shing . . . . .	275
12.3.1. Disconnections. . . . .	275
12.3.2. Synthesis . . . . .	275
12.3.3. Key reaction: intramolecular Diels–Alder reaction. . . . .	278
12.3.4. Supporting synthetic transformations . . . . .	280
12.4. Shishido’s approach to oblongolide C . . . . .	281
12.4.1. Disconnections. . . . .	281
12.4.2. Synthesis . . . . .	283
12.4.3. Key reaction: intramolecular [3+2] cycloadditions. . . . .	287
12.4.4. Supporting synthetic transformations . . . . .	288
12.5. References . . . . .	291

<b>List of Abbreviations</b> .....	295
<b>Index</b> .....	301
