Foreword	xiii
Kostas KAMPOURAKIS	
Preface	xix
Laurence MAURINES and Abdelkrim HASNI	
Introduction	xxiii
Laurence MAURINES and Abdelkrim HASNI	
Part 1. Science–Religion Relations	1
Chapter 1. Science–Religion Relations in Science Teaching: a Systematic Review	3
Abdelkrim HASNI, Younes YAZZA, Marco BARROCA-PACCARD, Mathieu GAGNON, Magali FUCHS-GALLEZOT, Laurence MAURINES and Sabrina MOISAN	
1.1. Introduction	3
1.2. Research questions	5
1.3. Methodology	5
1.3.1. Selection of articles	6
1.3.2. Development and validation of the analytical framework	7
1.3.3. Data collection and analysis	8
1.3.4. Limitations of the research	8
1.4. Results	9
1.4.1. Overview of characteristics of the publications	9
1.4.2. Conceptualizations or theorizations used	11
1.4.3. Results on the viewpoints of the actors	16
1.4.4. Variables influencing actors’ viewpoints	19
1.4.5. Teaching and training approaches	21
1.5. Discussion	22
1.5.1. Results of empirical studies	22

1.5.2. Science–religion conceptualizations and their implications for curricula and practices	25
1.6. Appendix: list of articles analyzed	26
1.7. References	31
Chapter 2. Science and Religious Belief: “Concordist” and “Non-concordist” Approaches	35
José-Luis WOLFS	
2.1. Introduction	35
2.2. Theoretical framework	36
2.2.1. Analysis of different definitions of the term “concordism”	36
2.2.2. Presentation of an analytical framework for possible positions between science and religious belief	38
2.2.3. A brief historical overview of the place of concordism within Christianity and Islam	42
2.3. An attempt to characterize different variants of concordism	44
2.3.1. Constructing a typology of different variants of concordism as opposed to compatibility/complementarity	44
2.3.2. Testing this typology	46
2.3.3. Analysis of the positions of different authors with reference to this typology	50
2.4. Conclusion	53
2.5. References	56
Chapter 3. A Multidimensional Approach to Representations of Science–Religion Relations	59
Laurence MAURINES and Magali FUCHS-GALLEZOT	
3.1. Introduction	59
3.2. Theoretical framework	60
3.2.1. Anthropological approach to scientific practices	61
3.2.2. Science–religion relations	64
3.2.3. Research on representations of S–R relations	67
3.3. Problem statement and research questions	68
3.4. Methodology	69
3.5. Results	75
3.5.1. Examples of student comments	75
3.5.2. Descriptive results for the three questions (Q1, Q2, Q3)	75
3.5.3. Results for representations of S–R relations	77
3.6. Discussion and conclusion	80
3.7. References	82

Part 2. Conspiracy Theories	87
Chapter 4. Conspiracy Theories and Critical Thinking in Young Quebeckers.	89
Stéphanie TREMBLAY and Mathieu COLIN	
4.1. Introduction	89
4.2. Post-truth, post-modernity and internal transformations of the academic world	91
4.3. Guidelines for critical thinking and factuality in a context of uncertainty	93
4.3.1. Critical thinking as normative horizon	93
4.3.2. Dimensions of factuality	94
4.4. Methodology	95
4.5. Young people's information habits during the pandemic	96
4.6. A typology of the horizons of critical thinking among young people	99
4.6.1. The rationalist horizon	99
4.6.2. The ethical horizon	101
4.6.3. The relativistic horizon	105
4.7. Discussion and conclusion	107
4.8. References	110
Chapter 5. Teaching about Conspiracy Thinking through Critical Thinking: Epistemic Tensions between Prescriptive Norms and Students' Relativism	113
Sybille ROULLER	
5.1. Introduction	113
5.2. Definition of conspiracy thinking	116
5.3. Education in critical thinking: issues and challenges	119
5.3.1. Critical thinking: an investigation and a problematization	119
5.3.2. A working definition of critical thinking	120
5.4. Conspiracy thinking and critical thinking: some elements of a theoretical framework	120
5.5. Analysis of the three main claims among students	121
5.5.1. "Absolute tolerance" towards all opinions: perspectives on the limits of free speech, tolerance and conspiracy thinking	124
5.5.2. "Absolute relativism".	126
5.5.3. "Epistemic individualism".	130
5.6. The challenges of critical thinking in a school setting	132
5.6.1. Discussion about tensions between an emancipatory pedagogy and a normative transmission of knowledge and values	133
5.6.2. Reflections on the possibilities of education in critical thinking for understanding conspiracy thinking	135

5.6.3. Teaching conspiracy thinking? Example of an inquiry-based approach implemented in a history class in a Swiss secondary school.	136
5.7. Conclusion	138
5.8. References	139
Part 3. Scientific Expertise and Critical Thinking in Teaching	143
Chapter 6. Scientific Expertise in the Teaching Resources Available to French Earth and Life Sciences (SVT) Teachers in Relation to Climate Change	145
Marco BARROCA-PACCARD, Abdelkrim HASNI, Yves DEBERNARDI, Nadia LAUSSELET, Hanaà CHALAK and Sveva GRIGIONI-BAUR	
6.1. Introduction	145
6.2. Scientific expertise, regulatory science and engagement.	147
6.2.1. Concept of expertise	148
6.2.2. Science and societal risks: regulatory science	150
6.2.3. Engagement of experts	153
6.3. An educational framework for thinking about problematization in the context of scientific expertise.	154
6.3.1. The framework for problematization of knowledge in natural sciences	154
6.3.2. Problematization in the context of scientific expertise.	155
6.4. Materials and methods	157
6.4.1. Study corpus.	157
6.4.2. Methodology of analysis	159
6.5. Results	159
6.5.1. Scientific expertise as a tool for legitimizing scientific knowledge: analysis of Belin textbooks for the final year of secondary school and of OCE video.	159
6.5.2. Scientific expertise as a tool for addressing societal, political and personal issues – analysis of videos from the French Academy of Sciences	163
6.6. Discussion and conclusion	166
6.7. References	169
Chapter 7. Life and Earth Sciences Teachers' Representations of Critical Thinking and Its Teaching.	171
Kévin de CHECCHI, Charlotte BARBIER and Gwen PALLARÈS	
7.1. Introduction	171
7.2. Conceptual framework	172
7.2.1. The nature of critical thinking	172
7.2.2. Teaching critical thinking	173

7.2.3. Teachers' representations of critical thinking and its teaching	174
7.3. Research questions	175
7.4. Methodology	175
7.4.1. The interview survey	175
7.4.2. The questionnaire survey	176
7.4.3. Method of analysis of responses	176
7.4.4. Characteristics of the population surveyed	177
7.4.5. Type of training received relating to critical thinking	178
7.5. Results and analyses	178
7.5.1. Representations of the nature of critical mind	178
7.5.2. The role of science teaching in the development of students' critical mind	180
7.5.3. Educational activities perceived as conducive to the development of students' critical mind	181
7.6. Discussions, limitations and educational implications	184
7.7. Appendix: questions used for the study	188
7.8. References	188
Chapter 8. Challenges of Transversal Mobilization of Critical Practices in Schools	193
Mathieu GAGNON	
8.1. Developing critical thinking: the obsolescence of "why"	193
8.2. From the obsolescence of "why" to the complexity of "what" and "how"	194
8.2.1. The complexity of the "what" of critical thinking	194
8.2.2. The complexity of the "how" of critical thinking	195
8.3. Critical thinking: a real or fantasized complexity?	197
8.4. From critical thinking to critical practices: more than just a terminological detail	199
8.4.1. The transversal nature of critical practices: oscillating between the metaphor of transfer and that of mobilization	199
8.4.2. Critical practices: towards a dialogue between the generic and the specific	202
8.5. Transversal mobilization of critical practices	203
8.5.1. Four influencing factors	203
8.5.2. The factor of epistemic and epistemological relationships to knowledge	205
8.6. Towards a second dialogue between mixed approaches and epistemic cognition	206
8.7. References	207

Part 4. Transformative Proposals	211
Chapter 9. Science Education and Regimes of Truths in the Anthropocene.	213
Sonia KEBAILI	
9.1. Introduction	213
9.2. The Anthropocene and science education	214
9.2.1. A new era to question.	214
9.2.2. A science education that needs revision.	217
9.3. Regimes of truth and the need for continuous re-problematization	219
9.3.1. Problematization and rationality.	220
9.3.2. A Foucauldian approach to continuous re-problematization	222
9.3.3. Alethurgical forms of discourses of problematization	224
9.4. A heterotopic school.	227
9.4.1. Heterotopia and the education system.	227
9.4.2. The paradox of complementarity	229
9.5. Conclusion	230
9.6. References	230
Chapter 10. Inclusion and Decolonization in History Teaching through Critical Multiperspectivity	235
Sabrina MOISAN and Louis GOSSELIN	
10.1. Introduction.	235
10.2. The issue of diversity in history teaching in Quebec	237
10.3. Inclusion and diversity as the norm and history teaching.	238
10.4. Decolonial indigenization, a critique of school history and of diversity as the norm.	240
10.4.1. Making knowledge of different kinds coexist.	242
10.4.2. Decolonial indigenization as a project of self-determination	243
10.5. Critical multiperspectivity as a lever for moving from inclusion to decolonial indigenization	244
10.6. Obstacles and possible solutions	249
10.7. Conclusion	250
10.8. References	251
Chapter 11. The Epistemic Dimension of an Education for Responsibility Mobilizing Meditation	257
Hélène HAGÈGE and Gaël MARIMOUTOU	
11.1. Introduction: societal, scientific and problematic context	257

11.2. Review of current knowledge	259
11.2.1. Responsibility and its key LSs	259
11.2.2. Meditation as a tool for educating for responsibility	261
11.3. New epistemic elements concerning ER	263
11.3.1. Support for our theoretical framework.	263
11.3.2. Hypotheses on a typology of the epistemic elements of ER	270
11.4. Research perspectives	273
11.4.1. Learning meditation: from cultural assimilation to psychological assimilation	273
11.4.2. Towards a didactic of ES, meditation and ER	274
11.4.3. Epistemic specificities of ER	275
11.4.4. Towards a phenomenological and scientific revolution?.	276
11.5. References	276
Postface	281
