Preface	xvii
Padmesh TRIPATHI, Mritunjay RAI and Seifedine KADRY	
Introduction	xxi
Padmesh TRIPATHI, Mritunjay RAI and Seifedine KADRY	
Chapter 1. Advancements in Affective Computing: A Deep Learning Perspective on Sentiment Analysis and Emotion Detection	1
R. Kishore KANNA, Priyanka SINGH, S. RAJU and Ayodeji Olalekan SALAU	
1.1. Introduction.	2
1.2. Deep learning architectures for sentiment and emotion analysis.	4
1.2.1. Identifying emotion in multiple forms.	4
1.3. Feature extraction across modalities	5
1.4. Fusion techniques textual datasets	6
1.4.1. Early fusion (feature level fusion)	6
1.4.2. Decision-level fusion (late fusion).	7
1.4.3. Mid-level fusion (hybrid fusion or joint fusion)	7
1.5. Textual datasets	8
1.5.1. Datasets of facial expressions.	8
1.5.2. Speech emotion recognition (SER) datasets	9
1.5.3. Additional investigation and other aspects	10
1.5.4. Causal inference in sentiments and emotions	10
1.6. Result analysis	11

1.7. Discussion	16
1.8. Conclusion	20
1.9. References	21

Chapter 2. A Study on how Humanization of AI can Strengthen Emotional Intelligence in Hotel Operations: National and International Perspectives Through an ISM Approach 25

Sushma SHARMA, Pawan KUMAR and Shubhangi TYAGI

2.1. Introduction.	26
2.2. AI and EI: national and international perspective	27
2.3. Identification of variables	28
2.3.1. Man–machine collaboration.	28
2.3.2. Skill development.	28
2.3.3. Improving customer experience through AI	29
2.3.4. Data-driven operational efficiency.	29
2.3.5. Strengthening trust through human–AI synergy.	29
2.3.6. Sustainable solutions.	29
2.3.7. Customized service model	30
2.4. Research gap	30
2.5. Research methodology	30
2.5.1. Objectives of the study.	30
2.5.2. Relevance of study	31
2.5.3. Research questions	31
2.6. Analysis and interpretation.	31
2.6.1. ISM process	31
2.6.2. MICMAC analysis	36
2.7. Discussion and recommendations.	37
2.8. Conclusion	38
2.8.1. Scope for further research.	38
2.8.2. Practical implications	38
2.9. References	39

Chapter 3. A Multimodal Fusion Framework Using a Deep Learning Approach for Identification of Visual Emotion and Sentiment Analysis 43

Manisha, Pridhi ARORA, Padmesh TRIPATHI, Preeti KATIYAR and Mritunjay RAI

3.1. Introduction.	43
3.2. Related work	45
3.2.1. Physiological and machine learning frameworks	45

3.2.2. IOT and surveillance usage	46
3.2.3. Deep learning in audio-visual recognition	46
3.2.4. Extended hybrid and attention-based architectures	46
3.3. Hybrid fusion architecture for multimodal visual and textual sentiment analysis	47
3.3.1. CNNs that separate depths	49
3.3.2. Bi-directional long short-term memory	50
3.3.3. Soft attention mechanism	51
3.4. Hybrid attention-based model architecture	52
3.4.1. Multimodal feature extraction	53
3.4.2. Data sources and modalities.	54
3.4.3. Feature extraction stage	55
3.4.4. Attention fusion block	56
3.4.5. Decision classifier	57
3.4.6. Hybrid attention fusion	58
3.4.7. Final classification	59
3.5. Dataset design and preprocessing.	61
3.5.1. Benchmark datasets	61
3.6. Model training and optimization	62
3.6.1. Training pipeline overview	62
3.6.2. Loss functions for multi-modal emotion data	62
3.6.3. Cross-entropy versus focal loss in imbalanced mental health data	63
3.6.4. Hyperparameter tuning strategies	63
3.7 Conclusion.	64
3.8. References	64

Chapter 4. Understanding Employee Sentiments: Leveraging Sentiment Analysis for Workplace Insights

Salini ROSALINE and Muskan JAIN

4.1. Introduction.	69
4.2. The importance of capturing employee sentiments	71
4.3. Process of sentiment analysis in organizations	73
4.3.1. Data collection	73
4.3.2. Sentiment categorization	75
4.3.3. Insights generation	77
4.4. Tools for sentiment analysis in HR.	79
4.4.1. Comparative evaluation of sentiment analysis tools	79
4.4.2. Strengths and limitations of different tools in a HR context.	81
4.4.3. Why Orange is selected	81

4.5. Case study: using Orange software for sentiment analysis	82
4.5.1. Introduction to Orange software	82
4.5.2. Dataset description and preprocessing	83
4.5.3. Overview of sentiment analysis workflow in Orange.	83
4.5.4. Step-by-step sentiment analysis workflow in Orange.	85
4.5.5. Interpretation of results	90
4.5.6. Practical insights derived from the dataset	93
4.5.7. Model limitations and sources of bias	94
4.6. Benefits and challenges of sentiment analysis in HR	95
4.6.1. Benefits of sentiment analysis in HR	95
4.6.2. Challenges of sentiment analysis in HR.	96
4.7. Future directions and emerging trends	97
4.8. References	99

**Chapter 5. Psychological Foundations of Human Emotion
and its Relevance to AI 105**

Roshitha Ratna MALLELA, B. Naresh KUMAR, Y. SUDHAMINI
and G. Sriker REDDY

5.1. Introduction.	105
5.2. Objectives of the chapter	107
5.3. Psychological theories of emotion	107
5.3.1. Basic emotion theories.	108
5.3.2. Cognitive appraisal theories.	110
5.3.3. The cognitive-mediational theory by Lazarus	110
5.3.4. Schachter–Singer two-factor theory	111
5.3.5. Constructivist theories	111
5.4. Physiological and neurological perspectives	112
5.4.1. Neural bases of emotion	113
5.4.2. Facial feedback hypothesis	113
5.5. Psychological theory comparison within the field of AI design	114
5.5.1. Emotion expression and recognition in humans	114
5.5.2. Nonverbal cues	115
5.5.3. Facial expressions and FACS.	115
5.5.4. Gestures and body language	115
5.5.5. Vocal tone and prosody	116
5.6. Verbal and textual indicators	117
5.7. Use of language and sentiment analysis	117
5.8. Psycholinguistic features, emotional valence	117
5.9. Prosody and SER	117
5.10. Culture and background information	118
5.11. Individual and cultural variations	118

5.12. Variations in people and populations	119
5.13. Emotional norms and cultural influences	119
5.14. Difficulties in universal emotion recognition	120
5.15. Bridging psychology and AI in emotion detection	121
5.16. How AI models interpret human emotions.	121
5.17. Emotion recognition using ML methods	122
5.18. Sentiment analysis using NLP	122
5.19. Facial and gesture analysis – computer vision.	123
5.20. Psychological principles in AI design	124
5.20.1. Incorporating appraisal theories into affective computing	124
5.20.2. Biologically inspired neural networks for emotion modeling	124
5.20.3. Challenges and ethical considerations	125
5.20.4. Prejudice in emotion recognition: racial, gender and cultural disparities	125
5.20.5. Privacy concerns in emotion AI	126
5.20.6. Simplification of complicated feelings	126
5.20.7. Future prospects of psychology-AI integration.	127
5.20.8. Interdisciplinary opportunities	128
5.21. Case studies and applications	128
5.21.1. AI in mental health and therapy.	128
5.21.2. Emotion aware chatbots	129
5.22. Human–computer interaction	131
5.22.1. Adaptive AI systems in HCI.	131
5.22.2. Technologies for emotion detection	132
5.22.3. Emotion-driven recommendation systems	133
5.22.4. Business and marketing applications.	135
5.22.5. Sentimental customer feedback	135
5.22.6. Advertising real-time emotion tracking	135
5.22.7. Synthesis and future directions	136
5.23. Emerging trends, open questions and ethical considerations in emotion AI	136
5.23.1. Future trends in emotion AI	136
5.23.2. Explainable AI (XAI) for transparent emotion modeling.	137
5.24. The ethical development of AI in emo-sensitive apps	139
5.25. Conclusion	140
5.26. References.	142

Chapter 6. Machine Learning Approaches for Sentiment Analysis 155

T.C. Swetha PRIYA and A. Kanaka DURGA

6.1. Introduction.	156
----------------------------	-----

6.2. Fundamentals of sentiment analysis	157
6.2.1. Types of sentiment analysis	157
6.2.2. Sentiment categories	158
6.2.3. Challenges faced by sentiment analysis	158
6.3. Introduction to machine learning	160
6.3.1. Machine learning approaches	160
6.4. Sentiment analysis using machine learning	161
6.4.1. Preprocessing text	162
6.4.2. Extraction of features	163
6.4.3. Text representation techniques	163
6.4.4. Classification	164
6.4.5. Case studies: end-to-end machine learning pipeline for sentiment detection	168
6.4.6. Deep learning advancements for sentiment analysis	170
6.5. Comparative analysis of traditional machine learning, deep learning and LLM approaches	173
6.6. Applications of sentiment analysis	174
6.6.1. Customer support service	174
6.6.2. Reputation management	175
6.6.3. Market research behavior	175
6.6.4. Social media data monitoring	175
6.7. Conclusion	175
6.8. References	176

Chapter 7. Natural Language Processing for Sentiment Analysis 179

P.R. ANISHA, Umaima Qader MOHIUDDIN and Hajira FAROOQUI

7.1. Introduction.	180
7.2. Background and related work	182
7.3. LLMs for sentiment analysis.	183
7.3.1. Introduction to LLMs (BERT, GPT, RoBERTa and FinBERT)	183
7.3.2. Why do LLMs outperform traditional models in finance?	185
7.3.3. Pretraining and fine-tuning LLMs for economic data.	185
7.4. Applications in financial and economic domains.	186
7.4.1. Stock market sentiment analysis	186
7.4.2. Crypto currency and Forex Market predictions	186
7.4.3. Earnings call and financial report sentiment analysis.	187
7.4.4. Central bank communications and policy impact analysis.	187
7.4.5. News and social media emotion in economic prediction.	187

7.5. Case study: Financial and economics with LLMs	188
7.5.1. Objective	189
7.5.2. Pseudocode: sentiment analysis of financial headlines	189
7.5.3. Methodology	190
7.6. Evaluation metrics	195
7.7. Challenges and limitations	196
7.8. Conclusion	196
7.9. Results	197
7.10. Future scope	200
7.11. References	200

Chapter 8. Decoding Human Affect: A Structural Equation Modeling Approach to Deep Learning-Based Emotional and Sentiment Analysis 203

Remmiya Rajan P., Kolapo IGE and Dineshan E.

8.1. Introduction	203
8.2. Study rationale	205
8.3. Study objectives	207
8.4. Study hypotheses	207
8.5. Review of related literature	208
8.5.1. Summary based on the objectives of systemic literature review	210
8.5.2. Summary of methodologies	210
8.5.3. Summary of key findings	211
8.5.4. Research gap	211
8.5.5. Relevance of this study	211
8.6. Study methodology	212
8.6.1. Research design	212
8.6.2. Data formula	212
8.6.3. Sample of the study	212
8.6.4. Questionnaire and factors (with JEL classification)	212
8.6.5. Key constructs and JEL codes	213
8.6.6. Statistical techniques (with formulas)	214
8.7. Analysis and interpretation	215
8.7.1. Interpretation of the item analysis and hypothesis testing	216
8.7.2. KMO and Bartlett's interpretation	219
8.7.3. Interpretation of results in relation to Hypothesis H3	220
8.7.4. To analyze the decoding human affect: a structural equation modeling approach to deep learning-based emotional and sentiment analysis	221
8.7.5. To analyze the validity within the measurement model	222
8.7.6. To analyze the structural equation model	224

8.8. Study findings	227
8.9. Conclusion	228
8.10. References.	228

Chapter 9. AI in Analyzing Emotions on Social Media Platforms: A Paradigm Shift. 231

Md. Saddam HOSSAIN, Farhana YEASMIN and Md. Shajahan KABIR

9.1. Introduction.	231
9.2. Theoretical framework: affective computing and emotion recognition	234
9.2.1. Defining affective computing and its relevance to AI in emotion recognition.	234
9.2.2. Psychological theories and their alignment with emotion recognition.	234
9.2.3. The role of AI methodologies in enhancing emotion recognition	235
9.3. Proposed conceptual framework	236
9.3.1. Emotion-oriented preprocessing (EOP).	236
9.3.2. Social media embedding layer (SMEL).	236
9.3.3. Representation fusion module (RFM).	236
9.3.4. Emotion classification and calibration (ECC)	236
9.4. Characteristics and challenges of social media data	237
9.4.1. Linguistic informality and slang in social media	237
9.4.2. The role of emojis, hashtags and sarcasm.	238
9.4.3. Overcoming data noise for accurate emotion recognition	238
9.5. AI methodologies for emotion detection on social media.	239
9.5.1. NLP techniques	239
9.5.2. Machine learning and deep learning models	239
9.5.3. Multimodal emotion recognition: text, image and audio integration	240
9.6. Applications and case studies	240
9.6.1. Tracking public mood shifts and social trends	240
9.6.2. AI in mental health detection and support	241
9.6.3. Coca-Cola's sentiment analysis in marketing campaigns	242
9.6.4. AI in political sentiment analysis – the 2016 U.S. Presidential Election	242
9.7. Ethical considerations in AI-based sentiment analysis	243
9.7.1. Data privacy and security	243
9.7.2. Algorithmic bias and fairness in AI systems	243
9.7.3. Ensuring transparency and accountability in AI deployment	244

9.8. Conclusion and future directions	244
9.8.1. Summary of key insights	244
9.8.2. Future implications of emotion recognition AI	245
9.8.3. Recommendations for future research and ethical guidelines	246
9.9. References	248

Chapter 10. Human Emotion Recognition Using Speech Signals 253

Geetanjali SRIVASTAVA, Girish SURSAKAR, Akash VISHWAKARMA
and Priyanka JAIN

10.1. Introduction	254
10.2. Related work	255
10.3. Methodology	258
10.3.1. Input speech signal – data corpus.	258
10.3.2. Speech processing.	259
10.3.3. Feature extraction	261
10.3.4. Model theory and implementations	265
10.4. Experimental results and discussions	269
10.5. Forensic applications and behavioral surveillance	271
10.5.1. Forensic investigation	271
10.5.2. Behavioral profiling and psychological support	272
10.5.3. Security and surveillance	272
10.5.4. Human–computer interaction	272
10.6. Conclusion	273
10.7. References.	273

Chapter 11. Transforming Employee Relations: The Role of Speech Emotion Recognition in Modern HR Practices 281

Revati Ramrao RAUTRAO

11.1. Introduction	282
11.1.1. The importance of employee conditions in modern organizations	282
11.1.2. Speech emotion recognition	290
11.1.3. Social exchange relationships	292
11.1.4. The use of SER in HRM	293
11.2. Background	294
11.3. Focus of the chapter	295
11.3.1. Solutions and recommendations	297
11.3.2. Future research directions	297

11.4. Conclusion	298
11.5. References.	299

Chapter 12. Fuzzy and Neutrosophic Logic-Based Models for Handling Uncertainty in Emotion Detection 303

Ajoy Kanti DAS, Nandini GUPTA, Suman PATRA and Takaaki FUJITA

12.1. Introduction	303
12.1.1. Major contributions and novelty	308
12.2. Basics of fuzzy and neutrosophic logic.	309
12.2.1. Classical (crisp) logic.	309
12.2.2. Fuzzy logic	309
12.2.3. Neutrosophic logic	310
12.3. Understanding uncertainty in emotions.	311
12.3.1. Real-life examples of unclear emotions	311
12.3.2. Why traditional models fail	312
12.3.3. Role of fuzzy logic in modeling emotions	312
12.3.4. Role of neutrosophic logic in modeling emotions	313
12.3.5. Mathematical model of uncertainty	313
12.4. Fuzzy logic-based emotion detection models	314
12.4.1. Structure of a fuzzy emotion detection model	314
12.4.2. Example: fuzzy model for speech emotion	315
12.4.3. Fuzzy rule base representation	316
12.4.4. Case study example.	316
12.4.5. Mathematical formulation	317
12.4.6. Advantages of fuzzy models in emotion detection.	317
12.5. Neutrosophic logic-based emotion detection models.	318
12.5.1. Structure of neutrosophic emotion model	318
12.5.2. Example: text-based emotion	318
12.5.3. Neutrosophic rule base	319
12.5.4. Case study: voice emotion.	319
12.5.5. Mathematical aggregation	320
12.5.6. Example with multiple emotions	320
12.5.7. Advantages of neutrosophic models	321
12.6. Comparison with classical methods.	321
12.6.1. Classical models.	321
12.6.2. Fuzzy models	321
12.6.3. Neutrosophic models	322
12.6.4. Numerical comparison table.	322
12.7. Applications in real life	323
12.7.1. Healthcare and mental health support	324
12.7.2. Customer sentiment analysis	324

12.7.3. Educational technology	325
12.7.4. Human–computer interaction	325
12.8. Challenges and integration with modern AI	326
12.8.1. Data complexity	326
12.8.2. Defining membership functions	326
12.8.3. Handling indeterminacy	327
12.8.4. Integration with deep learning	327
12.8.5. Computational cost	328
12.8.6. Integration with modern deep learning architectures	328
12.9. Conclusion	329
12.9.1. Key points	329
12.9.2. Comparison	330
12.9.3. Applications	330
12.9.4. Challenges	330
12.9.5. Future directions.	331
12.10. References	331

Chapter 13. The Evolution of Emotion Research: From Darwin's Theories to AI 337

Sirine Hadjer ZAABTA, Omar MATARI and Omar SEBBAGH

13.1. Introduction	338
13.2. Evolutionary foundations of emotion research	339
13.2.1. Darwin's legacy	339
13.2.2. Post-Darwinian developments	340
13.3. From marginalization to cognitive integration	346
13.3.1. Appraisal theory (Magda Arnold, Richard Lazarus).	346
13.3.2. Component process model of Klaus Scherer	347
13.3.3. Differential emotions theory (Carroll Izard)	347
13.4. The rise of emotional neuroscience	348
13.4.1. Joseph LeDoux's dual pathways for fear processing in the amygdala: low road and high road	349
13.4.2. Antonio Damasio's somatic marker hypothesis	350
13.4.3. Jaak Panksepp – basic emotional systems in the brain (affective neuroscience).	350
13.5. Toward affective computing and AI integration	352
13.5.1. Paul Ekman and the development of the Facial Action Coding System	352
13.5.2. Lisa Feldman Barrett and the theory of constructed emotion	353
13.5.3. Barbara Fredrickson and the broaden-and-build theory of positive emotions	354

13.5.4. Rosalind Picard and the emergence of affective computing	355
13.5.5. Contemporary advances in affective computing (2023–2025).	355
13.6. HGEAIF: bridging psychological theory and modern computation	357
13.6.1. Emotion-AI processing pipeline under HGEAIF: layered structure and key steps.	359
13.7. Ethical and conceptual challenges.	360
13.7.1. Privacy concerns in emotion AI	360
13.7.2. Algorithmic bias and fairness	361
13.7.3. Transparency and explainability	361
13.7.4. Responsible use and governance	361
13.8. Conclusion	362
13.9. References.	363
 Chapter 14. Real-Time Face Emotion Detection using Mobilenetv1 and Speech Emotion Recognition using Multimodal Analysis	 385
Budhaditya BHATTACHARYYA	
14.1. Introduction	385
14.2. Technical specifications.	386
14.3. Speech emotion recognition	387
14.4. Data preprocessing for audio analysis	390
14.4.1. Data preprocessing for text analysis	391
14.4.2. Facial emotion recognition	391
14.5. Simulation results	392
14.5.1 Results obtained on speech emotion recognition	392
14.5.2. Results obtained on facial emotion recognition	395
14.5.3. Impact of EmoSense: SOTA analysis	400
14.6. Conclusion	403
14.6.1. Contribution	403
14.6.2. Future scope	404
14.7. References.	404
 List of Authors	 407
