| <b>Chapter 1. Convolutional Neural Networks with Recurrent<br/>Layers for Network Intrusion Classification Using<br/>NSL-KDD Dataset</b> . . . . . | 1    |
| Ch. Srinivasa RAO, P. TEJASWINI, Shaik MAHEEN, R. LIKITHA,<br>R. SAHITHYA and Pranathi URADI REDDY                                                 |      |
| 1.1. Introduction. . . . .                                                                                                                         | 2    |
| 1.2. Related work . . . . .                                                                                                                        | 3    |
| 1.3. Methodology . . . . .                                                                                                                         | 4    |
| 1.3.1. Characteristics and preprocessing of NSL-KDD data . . . . .                                                                                 | 4    |
| 1.3.2. Convolutional neural network architecture. . . . .                                                                                          | 4    |
| 1.3.3. Recurrent neural network using LSTM cells. . . . .                                                                                          | 5    |
| 1.3.4. Hybrid CNN-LSTM integration . . . . .                                                                                                       | 5    |
| 1.3.5. Experimental setup and evaluation framework . . . . .                                                                                       | 6    |
| 1.4. Results. . . . .                                                                                                                              | 7    |
| 1.5. Conclusion . . . . .                                                                                                                          | 11   |
| 1.6. References . . . . .                                                                                                                          | 11   |

**Chapter 2. Spectral Graph Convolutional Networks for IoT Device Clustering and Anomalous Node Detection in Complex Network Topologies** . . . . . 13R. VANAJA, L. MANJULA, K. RAMACHANDRAN, T.R.K. KUMAR,  
S. Leoni SHARMILA and R. BALAPRIYA

|                                                                |    |
|----------------------------------------------------------------|----|
| 2.1. Introduction. . . . .                                     | 14 |
| 2.2. Literature review. . . . .                                | 14 |
| 2.3. Methodology . . . . .                                     | 15 |
| 2.3.1. Network representation and graph construction . . . . . | 15 |
| 2.3.2. Spectral graph convolutional architecture . . . . .     | 16 |
| 2.3.3. Dataset and preprocessing. . . . .                      | 19 |
| 2.4. Results and discussion . . . . .                          | 19 |
| 2.4.1. Clustering performance and validation . . . . .         | 19 |
| 2.4.2. Anomaly detection performance . . . . .                 | 19 |
| 2.4.3. Comparing the analysis to BA methods. . . . .           | 20 |
| 2.5. Discussion . . . . .                                      | 21 |
| 2.5.1. Model performance and architectural insights . . . . .  | 21 |
| 2.5.2. Domain-specific variations in performance . . . . .     | 22 |
| 2.5.3. Computational efficiency and scalability . . . . .      | 22 |
| 2.6. Conclusion . . . . .                                      | 23 |
| 2.7. References . . . . .                                      | 23 |

**Chapter 3. Graph Intelligence-enhanced Quantum-Inspired Hybrid Algorithms for Black–Litterman Portfolio Optimization with Value-at-Risk Constraints** . . . . . 25Srinivas YADLAPATY, G. SHRINITHA, G. AKSHAYA, G. NANDINI,  
Erukulla SATHWIKA and A. Vedha PRIYA

|                                                                               |    |
|-------------------------------------------------------------------------------|----|
| 3.1. Introduction. . . . .                                                    | 25 |
| 3.1.1. Background . . . . .                                                   | 26 |
| 3.1.2. Objective. . . . .                                                     | 26 |
| 3.1.3. Scope . . . . .                                                        | 27 |
| 3.2. Literature review. . . . .                                               | 27 |
| 3.3. Methodology . . . . .                                                    | 29 |
| 3.3.1. Construction of Black–Litterman posteriors . . . . .                   | 29 |
| 3.3.2. Hybrid quantum-inspired optimization under<br>VaR constraints. . . . . | 31 |
| 3.3.3. Performance evaluation and validation . . . . .                        | 32 |
| 3.4. Results. . . . .                                                         | 33 |
| 3.5. Conclusion . . . . .                                                     | 36 |
| 3.6. References . . . . .                                                     | 37 |

## **Chapter 4. Graph Intelligence-Assisted Variational Autoencoders and Monte Carlo Simulations for Financial Risk Assessment in the Quantum Computing Era . . . . . 39**

Ekbal RASHID, B. MEGHANA, D. Sri VARSHINI, Dasari HARINI,  
Chede RETHASVI and Cherala HARSHINI

|                                                                           |    |
|---------------------------------------------------------------------------|----|
| 4.1. Introduction. . . . .                                                | 40 |
| 4.1.1. Background . . . . .                                               | 40 |
| 4.1.2. Objective . . . . .                                                | 40 |
| 4.1.3. Scope . . . . .                                                    | 41 |
| 4.2. Literature review. . . . .                                           | 41 |
| 4.3. Methodology . . . . .                                                | 43 |
| 4.3.1. Data collection and preprocessing . . . . .                        | 43 |
| 4.3.2. MC architecture integration and model . . . . .                    | 45 |
| 4.3.3. Protocols of the experiment, assessment and strong tests . . . . . | 47 |
| 4.4. Results. . . . .                                                     | 48 |
| 4.5. Conclusion . . . . .                                                 | 51 |
| 4.6. References . . . . .                                                 | 52 |

## **Chapter 5. Auto-Regressive Integrated Moving Average (ARIMA) with Exogenous Variables and Fourier Features for Stock Volatility Prediction in Graph-Based Financial Networks . . . . . 55**

Mamilla MAHESWARI, Jerripothula CHAITHANYA, Gangadhari SWETHA,  
Kucharlapati VARSHITHA, G. Navya ANJALI and Maridi HARSHINI

|                                                                           |    |
|---------------------------------------------------------------------------|----|
| 5.1. Introduction. . . . .                                                | 56 |
| 5.2. Literature review. . . . .                                           | 57 |
| 5.3. Methodology and formulation of model . . . . .                       | 58 |
| 5.3.1. Measurement of volatility and formulation of the problem . . . . . | 58 |
| 5.3.2. ARIMA framework with exogenous variables. . . . .                  | 59 |
| 5.3.3. Fourier harmonic decomposition. . . . .                            | 61 |
| 5.4. Findings and analysis of the results and performance . . . . .       | 61 |
| 5.4.1. The S&P 500 volatility prediction performance . . . . .            | 61 |
| 5.4.2. Multi-index cross-market evaluation . . . . .                      | 63 |
| 5.4.3. Exogenous variable impact analysis . . . . .                       | 64 |
| 5.5. Conclusion . . . . .                                                 | 67 |
| 5.6. References . . . . .                                                 | 67 |

**Chapter 6. Geometric Brownian Motion and Cox–Ingersoll–Ross Models: Jump-Diffusion Processes in Graph-based Queueing Theory for Network Performance Analysis . . . . .** 69

Shivani S. BHASGLI, G. MEGHANA, G. ABHINAYA, G. MANVITHA,  
Chinta SAMATHA and A. SANDHYA

|                                                                   |    |
|-------------------------------------------------------------------|----|
| 6.1. Introduction. . . . .                                        | 69 |
| 6.1.1. Background . . . . .                                       | 70 |
| 6.1.2. Objective . . . . .                                        | 70 |
| 6.1.3. Scope . . . . .                                            | 71 |
| 6.2. Literature review. . . . .                                   | 71 |
| 6.3. Methodology . . . . .                                        | 72 |
| 6.3.1. Theoretical analysis and formulation of the model. . . . . | 73 |
| 6.3.2. Numerical experiments and simulation methods . . . . .     | 75 |
| 6.3.3. Performance metrics, calibration and validation. . . . .   | 77 |
| 6.4. Results. . . . .                                             | 78 |
| 6.5. Conclusion . . . . .                                         | 81 |
| 6.6. References . . . . .                                         | 82 |

**Chapter 7. Enhancing Financial Fraud Detection by Leveraging Llama2 NLP and Neo4j Graph Database for Contextual Analysis and Relationship Modeling. . . . .** 85

Sakthitharan SUBRAMANIAN, Karan Veer BHANDARI and  
Mayank KAMBOJ

|                                                    |     |
|----------------------------------------------------|-----|
| 7.1. Introduction. . . . .                         | 85  |
| 7.2. Literature survey. . . . .                    | 86  |
| 7.3. System analysis . . . . .                     | 88  |
| 7.3.1. Existing system . . . . .                   | 88  |
| 7.3.2. Proposed system . . . . .                   | 89  |
| 7.3.3. Data collection and preprocessing . . . . . | 93  |
| 7.3.4. Llama2 textual analysis . . . . .           | 93  |
| 7.3.5. Neo4j graph modeling . . . . .              | 94  |
| 7.3.6. Anomaly detection . . . . .                 | 94  |
| 7.3.7. Rule-based filtering. . . . .               | 96  |
| 7.4. System implementation and results. . . . .    | 96  |
| 7.4.1. Experimental setup . . . . .                | 97  |
| 7.4.2. Results . . . . .                           | 98  |
| 7.4.3. Conclusion. . . . .                         | 100 |
| 7.5. References . . . . .                          | 100 |

|                                                                                                      |     |
|------------------------------------------------------------------------------------------------------|-----|
| <b>Chapter 8. Digital Finance and Financial Inclusion in India:<br/>Opportunities and Challenges</b> | 103 |
| D. GNYANESWER, Kasaram MANASA and B. Mohan KUMAR                                                     |     |
| 8.1. Introduction.                                                                                   | 103 |
| 8.1.1. Context and significance.                                                                     | 103 |
| 8.1.2. Problem statement                                                                             | 104 |
| 8.1.3. Objectives                                                                                    | 104 |
| 8.2. Literature review: digital financial literacy and financial<br>inclusion in India               | 105 |
| 8.3. India's digital finance ecosystem: current status                                               | 107 |
| 8.3.1. Digital payment infrastructure                                                                | 107 |
| 8.3.2. Digital wallets and mobile banking                                                            | 107 |
| 8.3.3. Development of the fintech ecosystem                                                          | 107 |
| 8.3.4. Blockchain and cryptocurrencies: potential and pitfalls                                       | 108 |
| 8.4. Governance programs and policy systems.                                                         | 109 |
| 8.4.1. Jan Dhan Yojana: accounts ownership                                                           | 109 |
| 8.4.2. BHIM-UPI: real-time payment revolution                                                        | 109 |
| 8.4.3. RBI regulatory framework and sandbox initiatives                                              | 110 |
| 8.5. Opportunities: how digital finance advances inclusion                                           | 111 |
| 8.5.1. Geographic accessibility and cost reduction                                                   | 111 |
| 8.5.2. Broader credit access by alternative credit scoring                                           | 111 |
| 8.5.3. Financial empowerment of women                                                                | 112 |
| 8.5.4. Traceable transactions: a double-edged sword.                                                 | 112 |
| 8.6. Obstacles: comparative disadvantages in forming inclusive<br>digital finance                    | 113 |
| 8.6.1. Digital divide and infrastructure gap                                                         | 113 |
| 8.6.2. Digital literacy and disparity capabilities                                                   | 114 |
| 8.6.3. Trust loopholes and cybersecurity issues                                                      | 114 |
| 8.6.4. Regulatory challenges and policy gaps                                                         | 115 |
| 8.6.5. Informal credit market persistence.                                                           | 116 |

## **Chapter 15. AI-enabled Prediction and Inverse Design of Micro-Nano Scale Convective Heat and Mass Transfer Using Physics-informed Neural Networks Integrated with High-Fidelity Nanofluid CFD Simulations. . . . . 217**

T.R.K. KUMAR, S. Leoni SHARMILA, R. BALAPRIYA, R. VANAJA,  
L. MANJULA and K. RAMACHANDRAN

|                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------|-----|
| 15.1. Introduction . . . . .                                                                          | 218 |
| 15.1.1. Background and technical context . . . . .                                                    | 218 |
| 15.1.2. Motivation and significance . . . . .                                                         | 219 |
| 15.1.3. Objectives . . . . .                                                                          | 219 |
| 15.2. Literature review . . . . .                                                                     | 219 |
| 15.3. Methodology . . . . .                                                                           | 221 |
| 15.3.1. High-fidelity CFD modeling and dataset generation of high-fidelity nanofluid models . . . . . | 221 |
| 15.3.2. PINN architecture, loss formulation and training strategy . . . . .                           | 223 |
| 15.3.3. Multifidelity integration, uncertainty quantification and active sampling . . . . .           | 223 |
| 15.3.4. Inverse design, optimization loop and validation . . . . .                                    | 225 |
| 15.4. Results . . . . .                                                                               | 226 |
| 15.5. Conclusion . . . . .                                                                            | 229 |
| 15.6. References. . . . .                                                                             | 230 |

## **Chapter 16. Intelligent CFD–AI Hybrid Modeling of Multiphase Nanofluid Dynamics in Microfluidic Devices for Ultra-efficient Thermal Management, Energy Harvesting and Advanced Bio-thermal Applications . . . . . 233**

R. BALAPRIYA, R. VANAJA, L. MANJULA, K. RAMACHANDRAN,  
T.R.K. KUMAR and S. Leoni SHARMILA

|                                   |     |
|-----------------------------------|-----|
| 16.1. Introduction . . . . .      | 234 |
| 16.2. Literature review . . . . . | 234 |

|                                                           |     |
|-----------------------------------------------------------|-----|
| 16.3. Methodology . . . . .                               | 235 |
| 16.3.1. Hybrid CFD-AI modeling architecture . . . . .     | 235 |
| 16.3.2. Development of a PINN . . . . .                   | 237 |
| 16.3.3. Microfluidic device configurations. . . . .       | 238 |
| 16.4. Results and discussion. . . . .                     | 238 |
| 16.4.1. Model validation and predictive accuracy. . . . . | 238 |
| 16.4.2. Thermal management performance . . . . .          | 239 |
| 16.4.3. Energy harvesting applications . . . . .          | 239 |
| 16.4.4. Bio-thermal applications. . . . .                 | 241 |
| 16.5. Discussion. . . . .                                 | 241 |
| 16.6. Conclusion . . . . .                                | 242 |
| 16.7. References. . . . .                                 | 243 |

**Chapter 17. Graph Intelligence-enabled Precision Agriculture:  
Advanced Disease Detection System for Sugarcane Crops  
Using Intelligent Image Processing. . . . .**

245
