Preface	ix
Roger PRUD'HOMME, Stéphane VINCENT, Christian CHAUVEAU and Mahouton Norbert HOUNKONNOU	
Chapter 1. Modeling Interfaces with Fluid Phase	1
Roger PRUD'HOMME	
1.1. The concept of an interface	3
1.1.1. Interface in physics and geometric surfaces	3
1.1.2. The concept of equilibrium in the domain of interfaces	6
1.2. Some examples of interfaces.	6
1.2.1. Fluid phase change and separation interface	6
1.2.2. Solidification interface.	7
1.2.3. Generalized interfaces	8
1.3. Mathematical description of an interfacial layer	10
1.3.1. Normal gradient and tangential gradient	12
1.3.2. Structure and kinematics of an interfacial layer	13
1.3.3. Bulk and surface quantities	16
1.3.4. Interface balances.	17
1.3.5. Constitutive laws	20
1.4. Some additional information and examples of application	22
1.4.1. Effective surface tension between two miscible liquids	22
1.4.2. Terms that come into play in interface balance laws	23
1.4.3. Normal shockwave	24
1.4.4. Combustion waves	26
1.4.5. Thin premixed flame	29
1.4.6. Boundary layers.	31
1.5. Conclusion	31
1.6. References	33

Chapter 2. Simulations of Turbulent Two-Phase Flows with Phase Change Using a Multifield Approach Combined with LES 37

Solène GOUÉNARD, Stéphane VINCENT and Stéphane MIMOUNI

2.1. Introduction.	40
2.2. Computational model	42
2.2.1. Two-fluid model	43
2.2.2. Large Bubble Model	44
2.3. Filtered two-fluid equations	46
2.4. <i>A priori</i> LES study	47
2.4.1. Presentation of the test case	48
2.4.2. Order of magnitude of the subgrid terms	49
2.4.3. Comparison of turbulence models	52
2.4.4. ADM order.	56
2.4.5. Effect of the filter.	58
2.5. Comparison of turbulence models with true LES	61
2.5.1. Presentation of the METERO experiment	62
2.5.2. Presentation of the test case.	63
2.5.3. Simulation results.	63
2.5.4. Comparison between RANS and LES.	64
2.5.5. ADM implementation	66
2.6. New phase change model for large interfaces.	68
2.6.1. Implementation of the new heat flux model	68
2.6.2. Validation of the new heat transfer model	70
2.6.3. Sucking problem	71
2.6.4. Stefan problem	74
2.7. Conclusion	77
2.8. References	78

Chapter 3. An Original Approach to Extract Momentum and Heat Transfers from Particle-Resolved Simulations of Particulate Flows 83

Mohamed-Amine CHADIL, Stéphane VINCENT and Jean-Luc ESTIVALÈZES

3.1. Introduction.	83
3.2. Numerical methodology	86
3.2.1. Viscous penalty method	86
3.2.2. Drag force and heat flux computation using Aslam extension	88
3.3. Isolated stationary sphere passed by a uniform flow.	99
3.3.1. Drag force computation	100
3.3.2. Heat transfer computation.	105
3.4. Face-centered cubic arrangement of stationary sphere passed by a uniform flow.	107

3.4.1. Monodispersed face-centered cubic periodic arrangement of spheres	108
3.4.2. Bidisperse face-centered cubic periodic arrangement of spheres	111
3.5. Conclusion	113
3.6. Acknowledgments	114
3.7. References	114
Chapter 4. Interfaces and Critical Fluids	121
Roger PRUD'HOMME	
4.1. Thermostatistics of fluids in the vicinity of the critical point	123
4.1.1. Real fluids	123
4.1.2. A van der Waals fluid	125
4.1.3. Other laws for gases and dense liquids	128
4.2. Thermodynamics of fluids in the vicinity of the critical point	129
4.2.1. Universal exponents	129
4.2.2. Isobaric evolutions	131
4.2.3. Valid expressions of varying distance from the critical point	131
4.2.4. Summary of theoretical approaches	132
4.3. A specific mode of heat transmission: the piston effect	132
4.4. Expansion of a "drop" at critical pressure	136
4.5. Behavior of a pocket of supercritical fluid immersed into a high-temperature environment	139
4.6. Boiling near the critical point	142
4.7. Conclusion	146
4.8. References	146
Chapter 5. Shear-Induced Anomalies in the Brownian Motion of Particles in Strongly Fluctuating Near-Critical Mixtures	151
Daniel BEYSENS	
5.1. Introduction	151
5.2. Theoretical background	152
5.2.1. Miscibility critical point in binary mixtures	152
5.2.2. Effect of shear flow	154
5.2.3. Colloid Brownian motion and shear flow	156
5.3. Experiments and methods	158
5.4. Results and discussion	161
5.5. Concluding remarks	163
5.6. Acknowledgements	163
5.7. Appendix: Light scattering (photon beating spectroscopy)	163
5.8. References	165

Chapter 6. Basics on Interfaces in Combustion	167
Roger PRUD'HOMME	
6.1. Introduction.	168
6.2. Non-premixed laminar combustion.	172
6.2.1. Overview of a candle flame.	172
6.2.2. Analytical solution of a diffusion flame: the Burke–Schumann problem	173
6.2.3. Numerical solutions	176
6.3. Turbulent non-premixed combustion.	176
6.4. Premixed combustion.	179
6.4.1. Propagation of a premixed flame.	181
6.4.2. The combustion rate of the adiabatic, planar premixed flame.	183
6.4.3. Concepts in turbulent premixed combustion.	187
6.5. Plate combustion.	188
6.6. Powders	191
6.6.1. Thermites.	191
6.6.2. Solid propellant rockets	192
6.6.3. Spin-like combustion.	196
6.7. Sprays and fireworks	197
6.8. Conclusion	199
6.9. Acknowledgments.	200
6.10. Appendices	201
6.10.1. Appendix A: The Rankine–Hugoniot theory	201
6.10.2. Appendix B: Historical overview of research on combustion	212
6.11. References.	214
List of Authors	219
Index	221
Summary of Volume 2	223
