

# Contents

<b>Foreword . . . . .</b>	<b>xi</b>
Samuel FOREST	
<b>Introduction . . . . .</b>	<b>xv</b>
Emmanuel RICHAUD	
<b>Chapter 1. Mechanistic and Kinetic Aspects of Oxidative Aging . . . . .</b>	<b>1</b>
Emmanuel RICHAUD	
1.1. Introduction . . . . .	1
1.2. Oxidation mechanisms . . . . .	2
1.2.1. General mechanism . . . . .	2
1.2.2. Kinetic aspects . . . . .	8
1.2.3. Control by oxygen diffusion . . . . .	10
1.3. Kinetic modeling . . . . .	13
1.3.1. Introduction . . . . .	13
1.3.2. Standard scheme . . . . .	13
1.3.3. Strategy for estimating rate constants and orders of magnitude . . . . .	19
1.4. Conclusion . . . . .	21
1.5. References . . . . .	21

<b>Chapter 2. Polymer Aging in the Presence of Water . . . . .</b>	<b>25</b>
Emmanuel RICHAUD	
2.1. Introduction . . . . .	25
2.2. Physical aging of polymers in the presence of water . . . . .	25
2.2.1. Water solubility in the polymers . . . . .	26
2.2.2. Diffusivity of water into polymers . . . . .	30
2.2.3. The consequences of physical aging by water absorption on the mechanical properties of polymers . . . . .	32
2.3. Chemical aging in the presence of water (hydrolysis) . . . . .	34
2.3.1. General case . . . . .	35
2.3.2. Some practical cases of hydrolysis . . . . .	36
2.3.3. Consequences for mechanical properties . . . . .	40
2.3.4. Stabilization against hydrolytic aging . . . . .	41
2.4. Conclusion . . . . .	42
2.5. References . . . . .	43
 <b>Chapter 3. Polymers Under Ionizing Radiations: Introduction and Basic Principles . . . . .</b>	 <b>47</b>
Yvette NGONO	
3.1. Introduction . . . . .	47
3.2. Overview of ionizing radiation . . . . .	53
3.2.1. Definition . . . . .	53
3.2.2. Sources of ionizing radiations . . . . .	55
3.2.3. Quantifying energy deposition and radiation effects on matter . . . . .	56
3.3. Interactions between ionizing radiation and polymers: initial processes . . . . .	58
3.3.1. Photon–polymer interactions . . . . .	58
3.3.2. Interactions between particles and polymers . . . . .	60
3.3.3. Differences and similarities between various types of ionizing radiation . . . . .	67
3.4. Evolution of polymers under ionizing radiation . . . . .	68
3.4.1. Primary species . . . . .	69
3.4.2. Evolution of primary species . . . . .	69
3.4.3. Evolution of radicals: defect formation . . . . .	72
3.4.4. Parameters influencing the stability of polymers under radiation . . . . .	76
3.4.5. Specificity of swift heavy ions . . . . .	88

---

3.5. Conclusion . . . . .	91
3.6. Acknowledgments . . . . .	93
3.7. References . . . . .	94
<b>Chapter 4. Stabilization . . . . .</b>	<b>99</b>
Emmanuel RICHAUD	
4.1. Introduction . . . . .	99
4.2. Chemical reactions of stabilization against thermo-oxidative aging . . . . .	99
4.2.1. Strategy of stabilization against oxidative aging . . . . .	99
4.2.2. Kinetic aspects . . . . .	105
4.3. Stabilization against photochemical aging . . . . .	108
4.3.1. UV absorbers . . . . .	108
4.3.2. Quencher . . . . .	109
4.3.3. Pigments . . . . .	110
4.4. Synergies/antagonism . . . . .	110
4.5. Example of specific stabilizations . . . . .	111
4.5.1. PVC stabilization against dehydrochlorination . . . . .	111
4.5.2. Stabilization against depolymerization . . . . .	113
4.6. Physical phenomena involved in the external stabilization of polymers . . . . .	114
4.6.1. Solubility of stabilizers . . . . .	114
4.6.2. Volatility/surface loss of stabilizers . . . . .	115
4.6.3. Diffusivity of stabilizers . . . . .	117
4.6.4. Kinetic analysis of migration phenomena . . . . .	119
4.7. Methods for antioxidant detection and evaluation . . . . .	119
4.8. Conclusion . . . . .	121
4.9. References . . . . .	122
<b>Chapter 5. Effect of Chemical Aging on Mechanical Properties . . .</b>	<b>125</b>
Emmanuel RICHAUD	
5.1. Introduction . . . . .	125
5.2. Thermoplastics . . . . .	126
5.2.1. Change in the average molar mass . . . . .	126
5.2.2. Glass transition temperature . . . . .	127
5.2.3. Viscosity of the molten state . . . . .	128
5.2.4. Fracture properties . . . . .	129

5.3. Networks . . . . .	132
5.3.1. Networks in the rubbery state: elastomers . . . . .	132
5.3.2. Networks in the glassy state: thermosets . . . . .	134
5.4. Conclusion . . . . .	138
5.5. References . . . . .	138
 <b>Chapter 6. Physical Aging by Structural Relaxation in Polymers</b> . . . . .	141
Blandine QUÉLENNEC, Nicolas DELPOUVE and Laurent DELBREILH	
6.1. Introduction: glass transition and the glassy state . . . . .	141
6.1.1. Glass transition . . . . .	142
6.1.2. Characteristics of the glassy state . . . . .	154
6.2. Historical landmarks in the study of physical aging . . . . .	155
6.2.1. Tool's observations and the concept of fictive temperature . . . . .	155
6.2.2. The limits stated by Ritland . . . . .	155
6.2.3. Kovacs' experiments . . . . .	156
6.2.4. Theoretical contributions . . . . .	159
6.2.5. Monitoring the mechanical properties . . . . .	169
6.3. Experimental methods for studying physical aging . . . . .	171
6.3.1. Differential scanning calorimetry . . . . .	171
6.3.2. Fast scanning calorimetry . . . . .	176
6.3.3. Broadband dielectric spectroscopy . . . . .	177
6.3.4. Thermally stimulated depolarization currents . . . . .	179
6.3.5. Dynamic mechanical analysis . . . . .	182
6.3.6. Nuclear magnetic resonance spectroscopy . . . . .	183
6.3.7. Positron annihilation lifetime spectroscopy . . . . .	185
6.3.8. Ellipsometry . . . . .	185
6.3.9. Raman spectroscopy . . . . .	187
6.4. Physical aging in glassy systems . . . . .	188
6.4.1. Thermosetting polymers . . . . .	188
6.4.2. Amorphous thermoplastic polymers . . . . .	188
6.4.3. Semicrystalline polymers . . . . .	192
6.4.4. Copolymers . . . . .	194
6.4.5. Composites and nanocomposites . . . . .	195
6.4.6. Polymers and model systems: chalcogenide glasses . . . . .	196
6.5. For a better comprehension of physical aging . . . . .	198
6.5.1. Nature of relaxation dynamics in the glassy state . . . . .	198
6.5.2. An equilibration kinetics in several stages . . . . .	200

---

6.5.3. Sensitivity of aging by structural relaxation to scale effects and the behavior of a confined polymer . . . . .	202
6.5.4. Possibility of crystallization following aging by structural relaxation . . . . .	203
6.5.5. Predicting the influence of environmental factors on physical aging . . . . .	204
6.6. Conclusion . . . . .	206
6.7. References . . . . .	208
<b>Chapter 7. Several Aspects of Elastomer Fatigue . . . . .</b>	229
Stéphane MÉO, Alexis DELATTRE, Jean-Louis POISSON, Florian LACROIX and Stéphane LEJEUNES	
7.1. Introduction . . . . .	229
7.2. Problem formulation . . . . .	231
7.2.1. Fatigue in general terms . . . . .	231
7.2.2. Elastomer fatigue . . . . .	231
7.2.3. An example of a crack initiation study . . . . .	241
7.3. Conclusion . . . . .	254
7.4. References . . . . .	254
<b>Chapter 8. Influence of Polyamide 6,6 Molecular Mobility on Mechanical Behavior . . . . .</b>	261
Agustín RIOS DE ANDA, Louise-Anne FILLOT and Paul SOTTA	
8.1. Introduction . . . . .	261
8.2. Materials and techniques . . . . .	265
8.3. Sorption and plasticizing effect of pure polar and apolar solvents and of mixtures of solvents on pure PA6,6. . . . .	270
8.4. Properties of additized or chemically modified PA6,6 . . . . .	280
8.5. Conclusion . . . . .	288
8.6. References . . . . .	290
<b>Chapter 9. Statistic Approach to Polymer Network Degradation . . .</b>	295
Pierre GILOMINI	
9.1. Introduction . . . . .	295
9.2. Numerical simulation . . . . .	297
9.3. Probabilistic approach to degradation . . . . .	298

9.4. First example: trifunctional network with one or two reactive groups per chain. . . . .	300
9.5. Second example: trifunctional network with more than two reactive groups per chain . . . . .	302
9.6. Third example: a tetrafunctional network . . . . .	305
9.7. Conclusion . . . . .	307
9.8. References . . . . .	308
<b>List of Authors</b> . . . . .	309
<b>Index</b> . . . . .	311
