Preface	xi
Jean-Baptiste SIBARITA	
 Chapter 1. Principles of Light Microscopy	1
Guillaume DUPUIS	
1.1. Introduction.	1
1.2. Principle of image formation	3
1.2.1. Geometric approach	3
1.2.2. Wave approach	4
1.2.3. Image formation under coherent light	12
1.2.4. Microscope resolution (diffraction-limited)	14
1.2.5. Abbe's theory of image formation	15
1.3. Optical sectioning techniques in fluorescence microscopy	23
1.3.1. Wide-field techniques	25
1.3.2. Point-scanning techniques.	29
1.4. Conclusion	32
1.5. References	32
 Chapter 2. Contrast-based Label-Free Imaging and Phase Measurement	35
Pierre BON	
2.1. Introduction, the biological object as an index object	35
2.2. Zernike phase contrast	38
2.2.1. Practical application and limitations.	40
2.3. Differential interference contrast	42
2.3.1. Practical application and limitations.	43
2.4. Other contrast methods with transparent objects	45

2.5. Measuring phase quantitatively: more than just contrast	46
2.6. Conclusions.	49
2.7. References	49
Chapter 3. Fluorophores and Labeling Methods for Fluorescence Microscopy	51
Jip WULFFELÉ and Dominique BOURGEOIS	
3.1. Introduction.	51
3.2. Basics of fluorophore photophysics	52
3.3. Fluorescent proteins.	53
3.4. Organic dyes	59
3.5. Conclusion	64
3.6. References	65
Chapter 4. Quantitative FRAP and FCS	69
Cyril FAVARD	
4.1. Life is motion	69
4.2. FRAP	71
4.2.1. Basics of FRAP.	71
4.2.2. Quantitative principles of single spot FRAP	73
4.2.3. Analytical expression for principal origins of fluorescence recoveries	75
4.2.4. Variable radii FRAP	78
4.2.5. Quantitative imaging FRAP.	79
4.2.6. Fluorescence loss in photobleaching	80
4.2.7. Photoactivation/photoconversion	81
4.3. FCS	82
4.3.1. Basic principle of correlation spectroscopy	82
4.3.2. Mathematics of FCS	83
4.3.3. Analytical expression for different origins of concentration fluctuations.	86
4.3.4. Space and time correlation spectroscopy	88
4.4. Conclusion	94
4.5. References	94
Chapter 5. Single-Particle Tracking for Nanoscale Dynamics of Biological Samples	97
Antony LEE and Laurent COGNET	
5.1. Introduction.	97
5.2. Nanoscale localization	98

5.3. Trajectory reconstruction	100
5.4. Nanoscale dynamics.	102
5.4.1. Basic properties of Brownian motion	102
5.4.2. Quantification of experimental trajectories.	104
5.4.3. Time-variable diffusion	106
5.4.4. Beyond Brownian motion: anomalous diffusion	108
5.5. References	110
Chapter 6. In Depth Microscopy	113
Tom DELAIRE and Rémi GALLAND	
6.1. Introduction.	113
6.2. Confocal microscopy	115
6.2.1. Principle	115
6.2.2. Spinning disk confocal microscopy	117
6.2.3. Limitations.	118
6.2.4. Photon reassignment approaches – the new confocal systems	118
6.3. Multi-photon microscopy	120
6.3.1. Principle	120
6.3.2. Laser-scanning multi-photon microscopy optical setup	123
6.3.3. Widefield multi-photon microscopy by temporal focusing	123
6.4. Light-sheet fluorescence microscopy.	125
6.4.1. Principles and advantages	125
6.4.2. Light-sheet creation and properties	127
6.4.3. Main implementation overview	128
6.5. Computational-based methods.	132
6.6. Futures challenges for 3D imaging of complex samples	134
6.6.1. Optical aberrations	134
6.6.2. Fast 3D imaging methods	137
6.6.3. Data management, analysis and visualization	139
6.7. References	139
Chapter 7. Structured Illumination Microscopy	145
Alexandra FRAGOLA	
7.1. Introduction.	145
7.2. The principle of structured illumination microscopy	146
7.2.1. Prerequisites: the Moiré effect	146
7.2.2. Structured illumination to exceed the diffraction limit in fluorescence microscopy.	146
7.3. Reconstructing the 2D SIM image	149
7.4. Experimental implementation of the 2D SIM.	151
7.4.1. The setup: how to illuminate the sample with a sine pattern?	151
7.4.2. A resolution gain limited to a factor of 2	151

7.4.3. Optical sectioning for 2D SIM: application to biological imaging	152
7.5. 3D SIM	153
7.6. Saturated SIM, or SSIM: a resolution gain above a factor of 2	154
7.7. Conclusion and perspective	155
7.8. References	157
Chapter 8. STED Imaging of Neuronal Morphology.	159
Veera Venkata Gopala Krishna INAVALLI and Urs Valentin NÄGERL	
8.1. Introduction.	159
8.2. Principle.	162
8.3. Instrumentation of STED.	165
8.3.1. Labeling and optimization of STED.	173
8.4. New developments	177
8.4.1. Adaptive optics for 3D-STED microscopy.	177
8.4.2. Super-resolution shadow imaging (SUSHI)	179
8.4.3. Correlative imaging with STED and SMLM.	180
8.5. Summary and outlook.	182
8.6. References	183
Chapter 9. Single-Molecule Localization Microscopy: From Imaging Cellular Structures to Quantitative Image Analysis	189
Marina S. DIETZ and Mike HEILEMANN	
9.1. Introduction.	189
9.2. Concepts for single-molecule localization microscopy	190
9.3. Multiplexing	193
9.4. Extracting quantitative information from SMLM data	196
9.5. Conclusion	198
9.6. Acknowledgments.	198
9.7. References	198
Chapter 10. Image Processing and Image Analysis in Microscopy	205
Daniel SAGE and Anaïs BADOUAL	
10.1. Introduction	205
10.2. Context.	206
10.2.1. Multidimensional images	206
10.2.2. Major challenges in bioimaging	208
10.2.3. Software for bioimaging	209
10.2.4. Image analysis pipeline.	211
