Introduction	ix
Chapter 1. On Stability of Discrete and Asymptotically Continuous Systems	1
1.1. Stability – general concepts	1
1.2. Buckling of discrete conservative systems – Hencky’s column under conservative axial load.	18
1.3. Buckling of discrete non-conservative systems – Hencky’s column under follower axial load	28
1.4. Stability under kinematic constraints.	37
1.5. Conclusion	49
1.6. References	50
Chapter 2. Second-order Work Criterion and Stability in the Small	57
2.1. Some generalities in continuum mechanics for material systems	57
2.2. The link between the kinetic energy and the second-order work	60
2.3. The second-order work in Eulerian formalism	65
2.4. The second-order work on the material point scale	67
2.5. Conclusion	68
Chapter 3. Mixed Perturbations and Second-order Work Criterion	69
3.1. Introduction.	69
3.2. From a quasi-static to a dynamical regime	70

3.2.1. Existence of multiple equilibrium configurations	70
3.2.2. Stability of equilibrium configurations	74
3.2.3. Spectral analysis of tensors K and K^s	79
3.3. The case of discrete systems	80
3.3.1. General framework	80
3.3.2. The constrained system	82
3.4. Application to the generalized Ziegler column problem	88
3.4.1. The generalized Ziegler column problem.	88
3.4.2. Instability problem with constraints	94
3.5. Concluding remarks	99
3.6. References	100
Chapter 4. Divergence Kinematic Structural Stability	103
4.1. Introduction.	103
4.2. KISS issue	105
4.3. The paradigmatic case of the 2 dof Ziegler system	109
4.4. Algebraic approach	112
4.4.1. Schur's complement formula	112
4.4.2. Case of one constraint: $r = 1$	113
4.4.3. Case of any set of constraints: $1 \leq r \leq n - 1$	113
4.5. Variational approach	114
4.5.1. Variational and minimizing formulations.	114
4.5.2. Constraints and quadratic forms a, b, q : elimination of Lagrange multipliers	116
4.5.3. Divergence KISS issue.	118
4.6. Geometric approach	119
4.7. Coming back to Lyapunov's and Hill's stabilities	121
4.8. References	122
Chapter 5. Flutter Kinematic Structural Stability	125
5.1. Introduction.	125
5.1.1. Flutter stability and flutter KISS formulations	126
5.2. Grassmannian and Stiefel manifolds	128
5.3. Case $n = 3$ and $m = 2$	131
5.3.1. Geometric considerations and preliminary calculations	132
5.3.2. Sufficient conditions	137
5.3.3. Necessary and sufficient conditions: calculations in $\mathbb{S}_{2,3}(\mathbb{R})$	139
5.3.4. Necessary and sufficient conditions: calculations in \mathbb{S}^2	143
5.3.5. Summary of the results	148

5.4. Partial flutter KISS: examples	148
5.4.1. Mechanical consequences	148
5.4.2. Examples	149
5.4.3. $M = I_3$	152
5.4.4. Uniform mass distribution	154
5.5. References	155
Chapter 6. Geometric Degree of Non-conservativity	157
6.1. Introduction	157
6.2. Modeling and calculation of the GDNC: examples	158
6.2.1. Calculation of the GDNC	158
6.2.2. Examples	161
6.3. Calculation of \mathcal{C}_g	173
6.3.1. The GDNC and the exterior calculus	174
6.3.2. Set of solutions	176
6.3.3. An example	177
6.4. Extension to the nonlinear framework	181
6.4.1. Nonlinear issue and notations	182
6.4.2. Link with the linear framework	184
6.5. Solution of the nonlinear problem	185
6.5.1. The solution	185
6.5.2. Effectiveness of the solution	187
6.5.3. Set of solutions	188
6.5.4. The example	188
6.6. Duality KISS-GDNC	194
6.7. References	195
Chapter 7. Buckling of Granular Systems with Shear Interactions: Discrete versus Continuum Approaches	199
7.1. Introduction – instabilities of granular systems	199
7.2. Shear granular system – a discrete approach	201
7.3. Buckling of granular system – exact solution	206
7.4. Shear granular system – a continuous approach	211
7.5. Conclusion	218
7.6. References	218
Chapter 8. Continuous Divergence KISS	223
8.1. Introduction	223
8.2. Description of the problem	224
8.2.1. Strong formulation of divergence stability of the Beck column and its Ziegler system counterpart	224

8.2.2. Usual weak formulation of divergence stability of the Beck column and its Ziegler system counterpart	226
8.2.3. Results in a finite dimension space and position of the problem	228
8.3. Fundamental Spaces – topological aspects. Variational formulation of the problem	230
8.3.1. Vector spaces and operator $A(P)$: usual aspects	230
8.3.2. Kinematic constraints	232
8.3.3. An alternative formulation involving only the Hilbert space \mathcal{V} equipped with $(\cdot, \cdot)_{\mathcal{V}, 2}$: solution of issue 1	234
8.3.4. Variational formulation for the KISS problem.	235
8.3.5. Geometric solution of the KISS issue: compression of an operator	236
8.4. Solution for the kernel of the operators $A_s(P)$ and $\tilde{A}_s(P)$	239
8.4.1. Calculation of $A_s(P)$	240
8.4.2. Calculation of $\tilde{A}_s(P)$	242
8.4.3. Calculation of the critical load P_2^*	243
8.4.4. Calculation of $\ker A_s(P_2^*) = \ker \tilde{A}_s(P_2^*)$	244
8.4.5. Calculation of the optimal destabilizing constraint	244
8.5. $P_1^* = P_2^*$	246
8.6. Stability issues	249
8.7. Appendices	252
8.7.1. Equivalence between different forms of kinematic constraints	252
8.7.2. Eigenvalues problem for $\tilde{A}_s(P)$	253
8.7.3. Figures	257
8.8. References	258
