Introduction	xi
Laure MONCONDUIT and Laurence CROGUENNEC	
Chapter 1. Layered NaMO₂ for the Positive Electrode	1
Shinichi KOMABA and Kei KUBOTA	
1.1. Research history of layered transition metal oxides as electrode materials for Na-ion batteries until 2009.	1
1.2. Crystal structures of layered materials	4
1.2.1. Crystal structures of synthesizable Na _x MO ₂	4
1.2.2. Structural changes of O3-NaMO ₂ by Na extraction	7
1.2.3. Structural changes of P2-Na _x MO ₂ by Na extraction.	9
1.3. O3-type layered materials	10
1.3.1. NaMO ₂ (M = Sc, Ti, V, Cr, Mn, Fe, Co, Ni)	10
1.3.2. O3-Na[M,M']O ₂ (M, M' = transition metals)	19
1.3.3. Moist air stability of O3-NaMO ₂ and surface coating.	24
1.4. P2-type layered materials.	26
1.4.1. Practical issues of P2-type materials for Na-ion batteries	26
1.4.2. P2-Na _{2/3} [Mn,Co,M]O ₂	28
1.4.3. P2-Na _{2/3} [Mn,Fe,M]O ₂	29
1.4.4. P2-Na _{2/3} [Ni,Mn,M]O ₂	30
1.5. Summary and prospects	32
1.6. Acknowledgments.	33
1.7. References	33

Chapter 2. Polyanionic-Type Compounds as Positive Electrodes for Na-ion batteries	47
Long H. B. NGUYEN, Fan CHEN, Christian MASQUELIER and Laurence CROGUENNEC	
2.1. Introduction.	47
2.1.1. Oxides and polyanionic frameworks as positive electrodes for sodium ion-batteries	47
2.1.2. NASICONs and $\text{Na}_3\text{V}_2(\text{PO}_4)_2\text{F}_3$	50
2.2. NASICON structures as model frameworks in sodium-ion battery applications	53
2.2.1. Compositional diversity from solid electrolytes to electrodes	53
2.2.2. NASICON-typed materials as electrodes for Na batteries	55
2.2.3. $\text{Na}_3\text{V}_2(\text{PO}_4)_3$ (NVP)	58
2.3. $\text{Na}_3\text{V}_2(\text{PO}_4)_2\text{F}_3$ used as a model framework in sodium-ion battery applications	69
2.3.1. Structural description and compositional diversity	69
2.3.2. $\text{Na}_3\text{V}_2(\text{PO}_4)_2\text{F}_3$: a promising active material for positive electrodes in NIBs	72
2.3.3. Oxygen substitution in $\text{Na}_3\text{V}_2(\text{PO}_4)_2\text{F}_3$ and its effects on the electrochemical performance of substituted phases.	75
2.3.4. Paving the way toward $\text{Na}_3\text{V}_2(\text{PO}_4)_2\text{F}_3$ with superior performance.	80
2.4. Conclusion and perspectives.	86
2.5. References	87
Chapter 3. Hard Carbon for Na-ion Batteries: From Synthesis to Performance and Storage Mechanism	101
Carolina DEL MAR SAAVEDRA RIOS, Adrian BEDA, Loic SIMONIN and Camélia MATEI GHIMBEU	
3.1. Introduction.	101
3.2. What is a hard carbon?	103
3.3. Hard carbon synthesis and microstructure.	105
3.3.1. Synthetic precursors-based hard carbon synthesis.	107
3.3.2. Bio-polymers derived hard carbon synthesis	110
3.3.3. Biomass-based hard carbon synthesis	112
3.4. Hard carbon characteristics	116
3.4.1. Hard carbon structure	116
3.4.2. Hard carbon porosity	118

3.4.3. Hard carbon surface chemistry	121
3.4.4. Hard carbon structural defects	124
3.5. Electrochemical performance	126
3.5.1. Materials performance	126
3.5.2. Full Na-ion system performance	131
3.5.3. Sodium insertion mechanisms in hard carbon	132
3.6. Conclusion	135
3.7. References	136
Chapter 4. Non-Carbonaceous Negative Electrodes in Sodium Batteries	147
Vincent GABAUDAN, Moulay Tahar SOUGRATI, Lorenzo STIEVANO and Laure MONCONDUIT	
4.1. Introduction.	147
4.2. Insertion materials	149
4.2.1. Insertion anodes based on titanium oxide and titanates	149
4.2.2. Insertion anodes based on transition metal chalcogenides	157
4.2.3. Insertion MXene-based anodes	159
4.2.4. Insertion organic anodes	161
4.3. Negative electrode materials based on electrochemical alloying with sodium	162
4.3.1. Silicon and germanium.	163
4.3.2. Tin.	165
4.3.3. Phosphorus.	166
4.3.4. Antimony.	170
4.3.5. Other post-transition metal elements.	173
4.4. Negative electrode materials based on conversion reactions	174
4.4.1. Reaction mechanisms of CM	177
4.4.2. Approaches toward efficient anode CM for NIB	181
4.5. Conclusion	185
4.6. References	186
Chapter 5. Electrolytes for Sodium Batteries	205
Faezeh MAKHLOOGHIAZAD, Cristina POZO-GONZALO, Patrik JOHANSSON and Maria FORSYTH	
5.1. Introduction.	205
5.2. Liquid and solid electrolytes for sodium batteries	207
5.2.1. Organic liquid electrolytes.	208
5.2.2. IL-based electrolytes	211

5.2.3. Hybrid electrolytes	215
5.2.4. Effects of additives and impurities	216
5.2.5. Solid-state electrolytes	217
5.3. Properties of IL-based electrolytes for Na batteries	223
5.3.1. Physical properties	223
5.3.2. Thermal stability	224
5.3.3. Electrochemical stability.	225
5.4. Modeling IL-based electrolytes	226
5.5. Conclusion and future perspectives.	229
5.6. Abbreviations	231
5.7. References	233
Chapter 6. Solid Electrolyte Interphase in Na-ion batteries	243
Le Anh MA, Ronnie MOGENSEN, Andrew J. NAYLOR and Reza YOUNESI	
6.1. Introduction.	243
6.1.1. The solid electrolyte interphase.	243
6.1.2. Characterization of the SEI	244
6.2. Physical properties of the Na-ion SEI	247
6.2.1. Electrochemical stability.	247
6.2.2. Mechanical properties	248
6.2.3. Dissolution of SEI components	249
6.3. Comparisons of SEI in sodium- and lithium-based electrolytes	252
6.3.1. Formation and composition	252
6.3.2. Resistance	258
6.4. Conclusion	261
6.5. References	261
Chapter 7. Batteries Containing Prussian Blue Analogue Electrodes	265
Colin D. WESSELLS	
7.1. Introduction.	265
7.1.1. Chapter introduction	265
7.1.2. History of Prussian blue	265
7.1.3. Physical characteristics: structure, composition and morphology.	266
7.1.4. Synthetic methods	270
7.2. Electrochemistry of PBAs	273
7.2.1. Mechanism and resulting characteristics	273

7.2.2. Reaction potentials	275
7.2.3. PBA cathodes	278
7.2.4. PBA anodes	286
7.3. Prussian blue batteries	292
7.3.1. Cells containing two PBA electrodes	292
7.3.2. Cells containing one PBA electrode	300
7.3.3. Challenges for PBA batteries	304
7.4. Conclusion and future outlook	306
7.5. References	306
Chapter 8. The Design, Performance and Commercialization of Faradion's Non-aqueous Na-ion Battery Technology	313
Ashish RUDOLA, Fazlil COOWAR, Richard HEAP and Jerry BARKER	
8.1. Introduction.	313
8.2. Experimental	315
8.2.1. Active materials	315
8.2.2. Electrode fabrication	318
8.2.3. Pouch cell fabrication	319
8.2.4. Faradion electrolyte.	320
8.3. Cell performance	321
8.3.1. Half-cell cycling.	321
8.3.2. Full Na-ion cell cycling: curves and stability.	322
8.3.3. Rate capability.	323
8.3.4. Temperature studies	324
8.3.5. Three-electrode cell studies	325
8.4. Safety and zero energy storage and transportation	327
8.5. Scale-up and prototyping.	331
8.6. Demonstrators: stacks and packs	332
8.7. Business and IP strategy	335
8.8. Cost analysis	338
8.9. Future developments	338
8.10. Conclusion	342
8.11. Acknowledgments	343
8.12. References.	343
List of Authors	345
Index	349
