<b>Preface</b> . . . . .	xi
<b>Introduction</b> . . . . .	xiii
<b>List of Symbols</b> . . . . .	xxi
<b>Chapter 1. Fundamental Principles of Discrete Mechanics</b> . . . . .	1
1.1. Definitions of discrete mechanics . . . . .	1
1.1.1. Notion of discrete space–time . . . . .	1
1.1.2. Notion of a discrete medium . . . . .	4
1.2. Properties of discrete operators . . . . .	6
1.3. Invariance under translation and rotation . . . . .	9
1.4. Weak equivalence principle . . . . .	11
1.5. Principle of accumulation of stresses . . . . .	13
1.6. Duality-of-action principle . . . . .	14
1.7. Physical characteristics of a medium . . . . .	16
1.8. Composition of velocities and accelerations . . . . .	20
1.9. Discrete curvature . . . . .	23
1.10. Axioms of discrete mechanics . . . . .	28
<b>Chapter 2. Conservation of Acceleration</b> . . . . .	31
2.1. General principles . . . . .	31
2.2. Continuous memory . . . . .	34
2.3. Modeling the compression stress . . . . .	37
2.3.1. Compression experiment . . . . .	37
2.3.2. Modeling the stress in a solid . . . . .	39
2.3.3. Modeling the stress in a fluid . . . . .	39
2.3.4. Compression with small time constants . . . . .	41

2.3.5. Modeling the accumulation of the normal stress . . . . .	42
2.3.6. The energy formula, $e = m c^2$ . . . . .	43
2.4. Modeling the rotation stress . . . . .	44
2.4.1. Couette's experiment . . . . .	44
2.4.2. Behavior over time . . . . .	45
2.4.3. Rotation stress in solids . . . . .	46
2.4.4. Rotation stress in fluids . . . . .	47
2.4.5. Stresses in a porous medium, Darcy's law . . . . .	47
2.4.6. Modeling the accumulation of the rotation stress . . . . .	48
2.4.7. Rotation in Couette and Poiseuille flows . . . . .	49
2.5. Modeling other effects . . . . .	49
2.5.1. Gravitational effects . . . . .	50
2.5.2. Inertial effects . . . . .	52
2.6. Discrete equations of motion . . . . .	56
2.6.1. Geometric description . . . . .	56
2.6.2. Derivation of the equations of motion . . . . .	58
2.6.3. Dissipation of energy . . . . .	60
2.7. Coupling conditions . . . . .	63
2.8. Formulation of the equations of motion at a discontinuity . . . . .	65
2.9. Other forms of the equations of motion . . . . .	66
2.9.1. Curl and vector potential formulation . . . . .	67
2.9.2. Conservative form of the equations of motion . . . . .	69
2.10. Incompressible models derived from the discrete formulation . . . . .	70
2.10.1. Kinematic projection methods . . . . .	70
2.10.2. Incompressibility in discrete mechanics . . . . .	74
2.11. Consequences on the dynamics of the vorticity . . . . .	74
<b>Chapter 3. Conservation of Mass, Flux and Energy . . . . .</b>	<b>77</b>
3.1. Conservation of mass in a homogeneous medium . . . . .	77
3.1.1. In continuum mechanics . . . . .	78
3.1.2. In discrete mechanics . . . . .	80
3.2. Transport within multicomponent mixtures . . . . .	81
3.2.1. Classical approach . . . . .	81
3.2.2. Discrete model for the transport of chemical species . . . . .	84
3.2.3. Equilibrium in a binary mixture . . . . .	86
3.3. Advection . . . . .	88
3.4. Conservation of flux . . . . .	89
3.4.1. General remarks . . . . .	89
3.4.2. Model . . . . .	90
3.5. Conservation of energy . . . . .	93
3.5.1. Conservation of total energy . . . . .	93
3.5.2. Conservation of kinetic energy . . . . .	94
3.5.3. Conservation of internal energy . . . . .	95

3.5.4. Monotonically decreasing kinetic energy . . . . .	97
3.6. A complete system of equations . . . . .	98
3.7. A simple heat conduction problem . . . . .	99
3.7.1. Case of anisotropic materials . . . . .	101
3.8. Phase change . . . . .	102
3.8.1. The Stefan problem . . . . .	103
3.8.2. Condensation . . . . .	108
<b>Chapter 4. Properties of the Discrete Formulation . . . . .</b>	<b>115</b>
4.1. Fundamental properties . . . . .	115
4.1.1. Limitations on the velocity . . . . .	115
4.1.2. Inverting the formulas $\mathbf{V}_\phi = \nabla\phi$ and $\mathbf{V}_\psi = \nabla \times \psi$ . . . . .	118
4.1.3. Material frame-indifference . . . . .	121
4.1.4. Fundamental invariants . . . . .	123
4.2. System of equations . . . . .	124
4.3. Differences from continuum mechanics . . . . .	126
4.3.1. Differences from the Navier-Lamé equations . . . . .	126
4.3.2. Differences from the Navier-Stokes equations . . . . .	127
4.3.3. Dissipation . . . . .	131
4.3.4. Compatibility conditions for the Navier-Stokes equations . . . . .	133
4.4. Examples of analytic solutions of the equations of motion . . . . .	136
4.4.1. Rigid rotational motion . . . . .	136
4.4.2. Planar Couette flow . . . . .	138
4.4.3. Poiseuille flow . . . . .	140
4.4.4. Radial flow . . . . .	144
4.5. Incompressible motion . . . . .	145
4.5.1. The Green-Taylor vortex . . . . .	145
4.5.2. Lid-driven cavity . . . . .	148
4.6. Compressible fluids and perfect fluids . . . . .	150
4.6.1. Generalized Bernoulli equation . . . . .	151
4.6.2. Propagation of linear waves . . . . .	152
4.6.3. Sod shock tube . . . . .	155
4.7. Statics of fluids and solids . . . . .	158
4.8. Conditions for modeling a rigid solid . . . . .	159
4.9. Flows in a porous medium . . . . .	160
4.10. Stretching of space-time and Hugoniot's theorem . . . . .	165
<b>Chapter 5. Two-Phase Flows, Capillarity and Wetting . . . . .</b>	<b>169</b>
5.1. Formulation of the equations at the interfaces . . . . .	169
5.1.1. Modeling the curvature . . . . .	170
5.1.2. Formulation of the equations of motion . . . . .	174
5.2. Two-phase flows . . . . .	179
5.2.1. Two-phase Poiseuille flow . . . . .	179

5.2.2. Sloshing of two immiscible fluids . . . . .	181
5.3. Capillarity-dominated flows . . . . .	187
5.3.1. The Laplace problem . . . . .	187
5.3.2. Oscillating ellipse . . . . .	188
5.3.3. Marangoni-type flow in a droplet . . . . .	190
5.3.4. Interacting bubbles . . . . .	192
5.3.5. Simulating foam in equilibrium . . . . .	194
5.4. Partial wetting . . . . .	195
5.4.1. Droplet in equilibrium on a plane . . . . .	198
5.4.2. Spreading of a droplet . . . . .	200
5.4.3. Droplet acted upon by gravity . . . . .	204
5.4.4. Flows within a lens . . . . .	205
5.4.5. Capillary ascension in a tube . . . . .	206
<b>Chapter 6. Stresses and Strains in Solids . . . . .</b>	<b>209</b>
6.1. Discrete solid medium . . . . .	209
6.2. Stresses in solids . . . . .	211
6.2.1. Discrete equations . . . . .	212
6.2.2. Material frame-indifference . . . . .	214
6.2.3. Solid statics equations . . . . .	215
6.2.4. Calculating the displacement . . . . .	217
6.3. Properties of solid media . . . . .	219
6.3.1. In continuum mechanics . . . . .	220
6.3.2. In discrete mechanics . . . . .	223
6.4. Boundary conditions . . . . .	225
6.5. Rigid motion . . . . .	228
6.6. Validation of the model on examples . . . . .	230
6.6.1. Simple example of a monolithic fluid–structure interaction . . . . .	230
6.6.2. Mechanical equilibrium of sloshing . . . . .	233
6.6.3. Beam under extension . . . . .	235
6.6.4. Multimaterial compression . . . . .	237
6.6.5. Planar shearing . . . . .	238
6.6.6. Flexing beam . . . . .	239
6.6.7. Settling of a block under gravity . . . . .	240
6.6.8. Mechanical equilibrium of a solid object . . . . .	242
6.6.9. Extension to other constitutive laws . . . . .	243
6.7. Toward a unification of solid and fluid mechanics . . . . .	246
<b>Chapter 7. Multiphysical Extensions . . . . .</b>	<b>249</b>
7.1. Deflection of light . . . . .	249
7.1.1. Description of the physical phenomenon . . . . .	250
7.1.2. Deflection of light by the Sun in Newtonian mechanics . . . . .	252

7.1.3. Deflection of light by the Sun according to the duality-of-action principle . . . . .	256
7.1.4. Deflection of light by the Sun in a one-dimensional approach . . .	257
7.2. On a discrete approach to turbulence . . . . .	262
7.2.1. General remarks about the approach . . . . .	262
7.2.2. Dynamics of the vorticity in two spatial dimensions . . . . .	264
7.2.3. Analysis of a turbulent flow in a planar channel . . . . .	266
7.2.4. Model of the turbulence in discrete mechanics . . . . .	271
7.2.5. Application to a flow in a channel with $Re_\tau = 590$ . . . . .	272
7.3. The lid-driven cavity problem with $Re = 5,000$ . . . . .	280
7.4. Natural convection into the non-Boussinesq approximation . . . . .	283
7.5. Fluid–structure interaction . . . . .	286
<b>References</b> . . . . .	289
<b>Index</b> . . . . .	295
