Introduction	ix
Gwenn PERON-PINVIDIC	
Chapter 1. The West Iberian Margin: Past and Current Research Concepts and Future Challenges	1
Gaël LYMER and Tim J. RESTON	
1.1. Introduction: the West Iberian Margin, the “classic” magma-poor margin?	2
1.2. Structures of the West Iberian Margin	6
1.2.1. The Deep Galicia Margin (DGM)	9
1.2.2. The Southern Iberia Abyssal Plain (SIAP)	12
1.2.3. Conjugated West Iberian and Newfoundland Margins	13
1.3. Synrift tectono-stratigraphy and age and evolution of extension across the West Iberian Margin	13
1.4. Current models of development of the West Iberian Margin	18
1.5. Remaining questions at the West Iberian Margin and other magma-poor margins	21
1.6. Conclusions and outlook	25
1.7. References	26
Chapter 2. Tectonic Evolution of the Mid-Norwegian Rifted Margin	35
Per Terje OSMUNSEN and Gwenn PERON-PINVIDIC	
2.1. Introduction	36
2.2. Large-scale structure	39
2.2.1. The proximal margin and the proximal breakaway complex	40
2.2.2. The necking domain and the necking breakaway complexes	45
2.2.3. The distal domain and the distal breakaway complex	48
2.2.4. The outer domain	51
2.3. Syn-rift basin configuration and evolution	51

2.4. Breakup	57
2.5. Post-rift evolution	58
2.6. Future challenges	59
2.7. Acknowledgments	60
2.8. References	60
Chapter 3. South and Equatorial Atlantic Margins	69
Daniel ASLANIAN and Maryline MOULIN	
3.1. Introduction	69
3.2. Geodynamics and understanding passive margins genesis	76
3.3. Crustal structures in the South Atlantic and equatorial margins	79
3.4. Conclusion	84
3.5. References	87
Chapter 4. The Continental Margins of the Gulf of Aden	93
Sylvie LEROY and Chloé NONN	
4.1. Introduction	93
4.2. Geological and geodynamic context and heritage	94
4.3. Continental rifting timing, initiation and depositional environments	96
4.4. Structure of the conjugate margins	98
4.5. Ocean-continent transition (OCT) and the birth of an oceanic ridge	102
4.6. Opening of the Gulf of Aden	103
4.7. References	104
Chapter 5. The South China Sea – Rifting and the Evolution of a Marginal Basin	107
Manuel PUBELLIER, Sung-Ping CHANG and Matthias DELESCLUSE	
5.1. Introduction	108
5.2. Geodynamic setting and particularities	109
5.3. Propagators and implications on the rifting and the timing of breakup	113
5.3.1. Extreme thinning and detachment faulting away from narrow ocean–continent transition zones: far field and deep processes versus structural inheritance	115
5.4. A wide rift with boudinage crust resulting from contrasted crustal rheologies	116
5.4.1. Hyperextended continental crust	116
5.4.2. Reactivation of the Mesozoic Granite Belt	118
5.5. Impact of the subduction and collision of the neighboring basin	118
5.6. Post rifting evolution; uplift of margins and delayed subsidence of the basin	121

5.7. Conclusion	122
5.8. Acknowledgments	123
5.9. References	124
Chapter 6. Arctic Continental Margins	133
Carmen GAINA	
6.1. Introduction	133
6.2. Passive continental margins in the Arctic	134
6.2.1. The Canada Basin continental margins	134
6.2.2. The Eurasia Basin continental margins	138
6.3. Discussion and concluding remarks	141
6.4. References	145
Chapter 7. Alpine Tethys Margins	149
Gianreto MANATSCHAL and Pauline CHENIN	
7.1. Background and historical overview	149
7.1.1. Preamble	149
7.1.2. Geological and paleogeographical settings	150
7.1.3. Historical overview	154
7.2. From dispersed outcrops to the 2D architecture of the Alpine Tethys rift system	157
7.2.1. Datasets and building blocks (BB)	157
7.2.2. Building a spatial and temporal template for the Alpine Tethys rifting	160
7.2.3. What is missing?	164
7.3. Evolution of the Alpine Tethys rift system	165
7.4. Continuous deformation vs. succession of distinct deformation phases.	168
7.5. Three-dimensional aspect of the Alpine Tethys rift system	169
7.6. The Alpine Tethys remnants in the Alps: a laboratory to investigate and calibrate rift systems	171
7.6.1. The role of rift-inheritance in building collisional orogens	171
7.6.2. Calibration of rifting processes	172
7.6.3. The benefit of data-based scientific debate	172
7.7. References	173
Chapter 8. A Fossil Magma-rich Rifted Margin in the Scandinavian Caledonides	185
Johannes JAKOB, Hans Jørgen KJØLL and Torgeir Bjørge ANDERSEN	
8.1. Introduction	186
8.2. Opening of the Iapetus Ocean and formation of the Central Iapetus Magmatic Province	187

8.2.1. The Seiland Igneous Province	190
8.2.2. The Scandinavian Dyke Complex	191
8.3. Discussion	193
8.4. Conclusion	194
8.5. Acknowledgments	195
8.6. References	195
Chapter 9. Cretaceous Rifting at the Pyrenean Iberia–Eurasia Border: Crustal Thinning under a Pre-rift Cover – Application to Passive Margins	203
Yves LAGABRIELLE	
9.1. The North Pyrenean area within the Pyrenees.	203
9.2. Mechanisms of crustal thinning deduced from the study of the NPZ	206
9.3. Crustal thinning at the Iberian–Eurasian plate boundary: smooth-slope basins and the legacy of Triassic paleogeography	209
9.3.1. Cretaceous basins along the diffuse Iberian–Eurasian border.	209
9.3.2. General characteristics of “smooth-slope” basins – consideration of continental crust thinning modes	211
9.3.3. The opposition between Pyrenean- and Alpine-type rifts: role of Triassic palaeogeography on the modes of crustal thinning	215
9.4. Conclusion: from the Pyrenean basins to the formation mechanisms of passive continental margins.	219
9.5. Acknowledgments	222
9.6. References	222
