Foreword: Polymer Nanocomposites: Are There Scientific Questions with No Answers? xi
Jean-François GÉRARD

Chapter 1. Graphite and Graphene Nanoplatelets (GNP) Filled Polymer Matrix Nanocomposites 1
Marc PONÇOT, Adrien LETOFFE, Stéphane CUYNET, Sébastien FONTANA and Lucie SPEYER

1.1. General information on graphene 1
1.1.1. Definition and structure 1
1.1.2. Structures associated with graphene 2
1.1.3. Graphene properties 3
1.2. Graphene preparation methods 3
1.2.1. Graphite exfoliation 5
1.2.2. Graphite-derived compounds exfoliation 9
1.3. Methods of dispersion of carbon nanofillers in a polymer matrix 14
1.3.1. *In situ* polymerization 14
1.3.2. Intercalation in solution 16
1.3.3. Melt mixing 18
1.3.4. Comparison of development methods 22

1.4. Influence of the nanofiller on the properties of the nanocomposite . . . 23
1.4.1. Analysis of the material morphology . . . 23
1.4.2. Influence of nanofillers on semi-crystalline microstructures . . . 24
1.4.3. Influence of nanofillers on mechanical properties . . . 26
1.4.4. Influence of nanofillers on electrical properties . . . 29
1.4.5. Evolution of the thermal resistance . . . 34
1.5. References . . . 36

Chapter 2. Morphological Characterization Techniques for Nano-Reinforced Polymers . . . 47
Adoté Sitou BLIVI, Benhui FAN, Djimédo KONDO and Fahmi BEDOUI

2.1. Transmission electron microscopy . . . 47
2.1.1. Sample preparation and acquisition of the TEM images . . . 48
2.1.2. Size, dispersion and interparticle distance . . . 49
2.2. X-ray diffraction . . . 55
2.2.1. SAXS . . . 56
2.2.2. WAXS . . . 62
2.3. Conclusion . . . 67
2.4. References . . . 68

Chapter 3. Size Effects on Physical and Mechanical Properties of Nano-Reinforced Polymers . . . 71
Fahmi BEDOUI, Adoté Sitou BLIVI, Benhui FAN and Djimédo KONDO

3.1. Size effect on the glass transition temperature . . . 71
3.1.1. Differential scanning calorimetry . . . 71
3.1.2. Dynamic mechanical analysis . . . 73
3.1.3. Wide-angle temperature synchrotron X-ray diffraction (WAXS) . . . 74
3.2. Thermal stability . . . 82
3.3. Effect of size on mechanical properties . . . 83
3.3.1. Quasi-static tests: elastic properties . . . 83
3.3.2. Dynamic tests: viscoelastic properties . . . 88
3.4. Conclusion . . . 90
3.5. References . . . 91

Chapter 4. Effects of the Size and Nature of Fillers on the Thermal and Mechanical Properties of PEEK Matrix Composites 93
Marie DOUMENG, Karl DELBÉ, Florentin BERTHET, Olivier MARSAN, Jean DENAPE and France CHABERT

4.1. Introduction. 93
4.2. Materials and methods 96
4.2.1. Polymer. 96
4.2.2. Reinforcements 97
4.2.3. Nano- and microcomposites preparation 101
4.2.4. Characterization. 102
4.3. Results. 104
4.3.1. Characterization of the powders 104
4.3.2. Filler distribution in the matrix 107
4.3.3. Effect of size on thermal transitions 111
4.3.4. Effect of size on the degree of crystallinity. 112
4.3.5. Thermal properties 116
4.3.6. Effect of size on mechanical properties 119
4.4. Conclusion 133
4.5. References 135

Chapter 5. Study of Interface and Interphase between Epoxy Matrix and Carbon-based Nanofillers in Nanocomposites 141
Yu LIU, Delong HE, Ann-Lenaig HAMON and Jinbo BAI

5.1. Introduction. 141
5.1.1. Surface modification of the fillers 142
5.1.2. Experimental techniques. 143
5.2. Structural analysis of the interface with electron energy-loss spectroscopy 143
5.2.1. Analysis technique 143
5.2.2. Results 146
5.2.3. Interpretation. 148
5.3. *In situ* tensile test using scanning electron microscopy 149
5.3.1. Experimental set-up 151
5.3.2. Results 151
5.3.3. Interpretation. 153
5.3.4. Perspectives 154
5.4. Conclusion 155
5.5. Acknowledgments. 155
5.6. References 155

Chapter 6. Multiscale Modeling of Graphene-polymer Nanocomposites with Tunneling Effect 157
Xiaoxin LU, Julien YVONNET, Fabrice DETREZ and Jinbo BAI

6.1. Introduction. 157
6.2. Modeling of effective electric nonlinear behavior in graphene–polymer nanocomposites 159
6.2.1. Tunneling effect. 159
6.2.2. Nonlinear electrical conduction model at the RVE scale. 161
6.3. Numerical simulations of effective electric conductivity 164
6.3.1. Effect of barrier height on the percolation threshold 164
6.3.2. Effect of graphene aspect ratio on the percolation threshold. . . . 165
6.3.3. Effect of alignment of graphene sheets 165
6.3.4. Comparison between numerical and experimental results 167
6.4. Two-scale approaches. 169
6.4.1. Construction of the surrogate model based on ANN: strategy. . . 170
6.4.2. Structural application. 171
6.5. Electromechanical coupling 173
6.5.1. Mechanical modeling. 173
6.5.2. Constitutive laws 175
6.5.3. Weak form of mechanical problem 175
6.5.4. Identification of cohesive zone model. 176
6.5.5. Evolution of electrical properties under stretching of the composite 178
6.6. Conclusion 180
6.7. References 181

Chapter 7. Computational Modeling of Carbon Nanofiller Networks in Polymer Composites 187
Angel MORA

7.1. Introduction. 187
7.2. Modeling and simulation of CNT/polymer nanocomposites 190
7.2.1. Geometrical modeling of CNT/polymer nanocomposites 190
7.2.2. Analysis of electrical conductivity. 191
7.3. Improving electrical conductivity of polymers loaded with CNTs . . . 193
7.3.1. Introducing a definition of loading efficiency 194
7.3.2. Efficiency and electrical conductivity of polymers loaded with CNTs 196
7.3.3. Influence of junction resistance. 196

7.4. Improving electrical conductivity of polymers loaded with hybrid particles . . . 198
7.4.1. Hybrid particles . . . 198
7.4.2. Efficiency and electrical conductivity of CNT-GNP hybrid-particle networks . . . 200
7.4.3. Optimization of the hybrid-particle geometry . . . 201
7.5. Conclusions . . . 205
7.6. References . . . 205

Chapter 8. Electrostrictive Polymer Nanocomposites: Fundamental and Applications . . . 213
Shenghong YAO and Jinkai YUAN

8.1. Introduction . . . 213
8.2. Electrostriction relations . . . 215
8.3. Determination of the electrostriction coefficient . . . 217
8.4. The route to high electrostriction materials . . . 222
8.5. Applications of electrostrictive materials . . . 226
8.5.1. Actuators . . . 226
8.5.2. Capacitive sensors . . . 226
8.5.3. Mechanical energy harvesting . . . 228
8.6. Conclusions and perspectives . . . 234
8.7. References . . . 234
