<b>Foreword</b> . . . . .	xiii
<b>Chapter 1. Soils as a Key Component of the Critical Zone</b> . . . . .	1
Jacques BERTHELIN, Guilhem BOURRIÉ, Michel-Claude GIRARD, Guillaume DHÉRISSARD and Christian VALENTIN	
1.1. What are soils? . . . . .	1
1.2. The Earth, land, soils, soil cover and the Critical Zone. . . . .	2
1.3. The term “soil” has various meanings according to use and function processes . . . . .	5
1.4. The concept of soil varies according to the user . . . . .	6
1.4.1. Agricultural sector . . . . .	7
1.4.2. Scientific communities . . . . .	7
1.4.3. Urban communities . . . . .	8
1.4.4. Current pressures and questions . . . . .	8
1.5. The approaches and procedures of soil scientists and pedologists. . . . .	9
1.6. Two principles to take into account: geographical continuity and multi-temporality . . . . .	10
1.6.1. Principle of continuity . . . . .	10
1.6.2. Principle of multi-temporality . . . . .	13
1.7. Nature, organization and major modes of soil processes. . . . .	15
1.7.1. Soils before the arrival of humans. . . . .	15
1.7.2. Specifics and origins of the Earth’s soils . . . . .	17
1.7.3. The parameters controlling differentiation and diversity of soils . . . . .	18
1.8. The functions and services of soils. . . . .	23
1.8.1. Major functions . . . . .	23
1.8.2. Services provided by soils . . . . .	24
1.8.3. The role of soils within our culture and our history . . . . .	25

1.9. The need and significance of soil information systems. . . . .	29
1.10. Conclusion and recommendation . . . . .	29
1.11. Bibliography . . . . .	30
<b>Chapter 2. Understanding Soils for Their More Efficient Management: A National Soil Information System . . . . .</b>	<b>35</b>
Marion BARDY, Dominique ARROUAYS, Claudy JOLIVET, Bertrand LAROCHE, Christine LE BAS, Manuel MARTIN, Céline RATIÉ, Anne C. RICHER-DE-FORGES, Nicolas SABY, Véronique ANTONI, Antonio BISPO, Michel BROSSARD, Jean-Luc FORT, Joëlle SAUTER and Chantal GASCUEL	
2.1. Introduction . . . . .	35
2.2. The inventory and monitoring of soils in Europe and in the world. . . . .	36
2.3. National mechanisms for the acquisition of soil data . . . . .	37
2.3.1. Issues and demands . . . . .	37
2.3.2. Structuring of national data collection mechanisms . . . . .	38
2.4. Data exploitation for the production of maps and indicators. . . . .	44
2.5. Dissemination and availability of data . . . . .	49
2.5.1. A national soil information system focused on data dissemination . . . . .	49
2.5.2. A progressive enrichment of data and metadata supply . . . . .	50
2.5.3. Assisting the use, improvement and control of data . . . . .	52
2.6. Conclusion . . . . .	52
2.7. Bibliography . . . . .	53
<b>Chapter 3. Soils and Regulation of the Hydrological Cycle . . . . .</b>	<b>59</b>
Marc VOLTZ, Cécile DAGÈS, Laurent PRÉVOT and Ary BRUAND	
3.1. The soil – facilitator within the hydrological cycle . . . . .	59
3.2. Soil control mechanisms . . . . .	61
3.2.1. Infiltration–runoff partition . . . . .	61
3.2.2. Aquifer recharge . . . . .	65
3.2.3. Evaporation and transpiration flows. . . . .	67
3.2.4. Capillary rise . . . . .	70
3.2.5. Soil water budget . . . . .	71
3.2.6. Hydrological flows along hillslopes. . . . .	72
3.3. Impacts on the hydrological cycle at soil cover scale. . . . .	74
3.3.1. Influence of soil and land use variations . . . . .	75
3.3.2. Influence of land use changes . . . . .	77
3.3.3. Influence of landscape infrastructures. . . . .	78
3.4. Conclusions . . . . .	79
3.5. Bibliography . . . . .	79

---

<b>Chapter 4. Soils as Bio-physicochemical Reactors . . . . .</b>	<b>81</b>
Fabienne TROLARD and Guilhem BOURRIÉ	
4.1. What is a reactor? . . . . .	81
4.2. Soil components . . . . .	85
4.3. Reactivity drivers . . . . .	86
4.4. Main reactions within soils . . . . .	90
4.4.1. Master variables: pH and pe . . . . .	90
4.4.2. Acid–base reactions . . . . .	91
4.4.3. Reactions of oxido-reduction . . . . .	94
4.4.4. Degradation of organic matter . . . . .	95
4.5. Biogeochemical evolution of the Earth’s surface and the consequences for soils . . . . .	96
4.5.1. Availability of chemical elements changed with the Earth’s evolution . . . . .	96
4.5.2. The evolution of the Earth’s reactor imposed the evolution of living organisms . . . . .	99
4.5.3. Emergence of the “soil” function within the Critical Zone . . . . .	101
4.6. Soil, biogeochemical reactor of soil formation . . . . .	103
4.6.1. Vertical dynamics of soils: the lowering of horizons within landscapes . . . . .	105
4.6.2. Lateral dynamics of soil and transformations of soil covers . . . . .	107
4.6.3. Lateral dynamics by epigenesis (replacement) . . . . .	111
4.7. Soil structure: a case of “soft matter” . . . . .	112
4.8. Bibliography . . . . .	113
<b>Chapter 5. Soils are Biosystems, Habitats and Reserves of Biodiversity . . . . .</b>	<b>117</b>
Jacques BERTHELIN, Éric BLANCHART, Jean TRAP and Jean Charles MUNCH	
5.1. Introduction . . . . .	117
5.2. Emergence and development of microbial ecology and soil biology . . . . .	118
5.2.1. Discovery of the microbial world, a turning point in the knowledge of the functioning of soil–plant systems . . . . .	118
5.2.2. Discovery of the role of fauna and development of soil biology . . . . .	119
5.3. Soil microbial communities . . . . .	119
5.3.1. Richness and diversity of microbial communities . . . . .	119
5.3.2. Evolution of methodologies in soil microbial ecology . . . . .	123
5.4. Diversity of energy and nutritional pathways of microorganisms, key players in biogeochemical cycles . . . . .	124
5.4.1. Heterotrophy, autotrophy and extreme environments . . . . .	124

5.4.2. Soils, environments where life is active with or without oxygen . . . . .	125
5.5. Richness and diversity of soil fauna . . . . .	126
5.5.1. Diversity of soil fauna . . . . .	126
5.5.2. Classification by size . . . . .	127
5.5.3. Functional classification <i>sensu lato</i> . . . . .	127
5.5.4. Characterization of the fauna . . . . .	128
5.6. Soils, environments with energy and nutritional conditions favorable to microbial life and fauna . . . . .	128
5.7. Determinants and remarkable sites of diversity and soil biological activities . . . . .	129
5.7.1. Parameters and major activity sites . . . . .	129
5.7.2. Impact of land use . . . . .	130
5.7.3. Humus, integrators and developers of specific biological activities . . . . .	131
5.7.4. The rhizosphere, a site of major interactions of soil–plant systems . . . . .	132
5.8. Tools for understanding the habitats of soil organisms . . . . .	133
5.9. Specificities of the soil fauna . . . . .	133
5.9.1. Microregulators . . . . .	134
5.9.2. The communities of organisms called “engineers” . . . . .	134
5.10. Soil organisms: ecosystem service actors . . . . .	135
5.11. Soil quality indicators . . . . .	137
5.11.1. Soil organisms as indicators . . . . .	137
5.11.2. Ecological functions as indicators . . . . .	138
5.12. Conclusion and perspectives . . . . .	138
5.13. Bibliography . . . . .	139
 <b>Chapter 6. Soils, a Factor in Plant Production: Agroecosystems</b> . . . . .	147
Claire CHENU, Jean ROGER-ESTRADE, Chantal GASCUEL and Christian WALTER	
6.1. Introduction . . . . .	147
6.2. Evolution of soil–agriculture relationship over the last few decades . . . . .	148
6.3. Agricultural capability of soils . . . . .	150
6.3.1. How do we define the agricultural capability of a soil? . . . . .	150
6.3.2. Limited soil resources on a global scale . . . . .	154
6.4. Agricultural practices that alter soil properties . . . . .	155
6.5. Toward sustainable management of agricultural soils . . . . .	158
6.6. Conclusion . . . . .	161
6.7. Bibliography . . . . .	161

---

<b>Chapter 7. Forest Soils: Characteristics and Sustainability . . . . .</b>	<b>163</b>
Jacques RANGER	
7.1. Forest soils . . . . .	163
7.2. Bioavailability of nutrients: soil–plant coevolution and the role of the biological cycle . . . . .	165
7.3. Concept of forest soil fertility . . . . .	170
7.4. Specificity of forest soils compared to agricultural soils . . . . .	171
7.5. Threats to forest soils . . . . .	175
7.5.1. Acidification . . . . .	175
7.5.2. Physical degradation . . . . .	177
7.5.3. The particular problem of organic carbon: soil fertility and climate change . . . . .	179
7.5.4. Maintaining biodiversity . . . . .	180
7.5.5. Pollution . . . . .	181
7.5.6. Disappearance of forest soils . . . . .	181
7.6. Conclusions . . . . .	181
7.7. Bibliography . . . . .	183
<b>Chapter 8. Soils and Energy . . . . .</b>	<b>187</b>
Isabelle FEIX	
8.1. Soils at the heart of global issues . . . . .	187
8.2. Energy context . . . . .	188
8.3. Soils, energy supports and energy suppliers . . . . .	190
8.3.1. Forest and agricultural biomass production: for bioenergy production . . . . .	190
8.3.2. Physical supports of renewable energy: ground-mounted photovoltaic power plants and onshore wind turbines . . . . .	190
8.3.3. Heat and freshness supplies: horizontal superficial geothermal energy and climatic wells . . . . .	191
8.3.4. Peat: formerly used as a biofuel . . . . .	191
8.4. The consequences of energy production on mobilization, occupation and land-use change . . . . .	192
8.4.1. Comparison of land use intensities and land area occupations for energy production . . . . .	194
8.4.2. Comparison of land use changes related to different energies . . . . .	202
8.4.3. Consequences of energy policies for land mobilization and LUC . . . . .	204
8.4.4. Optimization of land use . . . . .	206
8.5. Impacts of energy production on soil loss, degradation and quality . . . . .	207
8.5.1. Impacts common to all energies . . . . .	207
8.5.2. Peat . . . . .	208
8.5.3. Fossil fuels . . . . .	208

---

x Soils as a Key Component of the Critical Zone 1

---

8.5.4. Nuclear energy . . . . .	208
8.5.5. Solar and wind energies . . . . .	209
8.5.6. Bioenergies . . . . .	210
8.6. Conclusion . . . . .	217
8.7. Bibliography . . . . .	219
<b>Chapter 9. Soils, Materials, and Infrastructure Supports . . . . .</b>	<b>233</b>
Guilhem BOURRIÉ and Fabienne TROLARD	
9.1. The use of “raw” soils as building materials . . . . .	233
9.2. Soils, infrastructure supports . . . . .	236
9.3. The classical civil engineering versus the physical approach of granular media . . . . .	237
9.4. Consumption of agricultural land, forest or natural areas by urban sprawl . . . . .	239
9.5. The use of separate particle size fractions . . . . .	242
9.5.1. The use of coarse fractions . . . . .	242
9.5.2. The use of the clay fraction as material and reaction support . . . . .	242
9.5.3. The use of the soil organic fraction . . . . .	243
9.5.4. The use of soil oxides . . . . .	243
9.6. The use of chemical elements after extraction and treatment . . . . .	243
9.7. Bibliography . . . . .	244
<b>Chapter 10. Cultural Dimensions of Soils . . . . .</b>	<b>247</b>
Suzanne MÉRIAUX and Michel-Claude GIRARD	
10.1. Soil representations – the Earth celebrated . . . . .	247
10.1.1. The written Earth . . . . .	248
10.1.2. The illustrated Earth . . . . .	251
10.1.3. The Earth with sound . . . . .	254
10.2. Humanity, Earth and soil: myths and rites . . . . .	258
10.2.1. Defining myths . . . . .	259
10.2.2. Earth and soils in myths . . . . .	259
10.2.3. Myths . . . . .	261
10.2.4. Rites . . . . .	268
10.2.5. Analogies with the pedological approach? . . . . .	269
10.2.6. Links between humans and earth/soils . . . . .	270
10.2.7. Conclusion . . . . .	271
10.3. Bibliography . . . . .	272

---

<b>Chapter 11. Environmental and Societal Memories of Soils . . . . .</b>	275
Marie-Agnès COURTY	
11.1. Ancient soils: archives of human history . . . . .	275
11.1.1. Objectives . . . . .	275
11.1.2. Soil memory and climate change . . . . .	276
11.1.3. Memory of ancient soils and societies . . . . .	278
11.2. Methods of studying soil memory . . . . .	279
11.2.1. The field approach . . . . .	279
11.2.2. Analytical characterization . . . . .	281
11.3. Reading the ancient soil memory . . . . .	282
11.3.1. Foundations . . . . .	282
11.3.2. Sedimentary features . . . . .	283
11.3.3. Combustion features . . . . .	285
11.3.4. Soil features . . . . .	287
11.4. Conclusion and perspectives . . . . .	294
11.5. Bibliography . . . . .	295
<b>Chapter 12. A Mesological Point of View . . . . .</b>	299
Pierre DONADIEU	
12.1. Soil ubiquity . . . . .	299
12.2. Soil as... . . . . .	301
12.3. Off-ground? . . . . .	303
12.4. Living off-ground . . . . .	304
12.5. Limits of the off-ground . . . . .	307
12.6. Conclusion . . . . .	309
12.7. Bibliography . . . . .	309
<b>List of Authors . . . . .</b>	311
<b>Index . . . . .</b>	315
