Preface	ix
Chapter 1. Pipe Networks	1
1.1. Introduction	1
1.2. Calculation of pipe networks	3
1.3. Problem-solving methodology for pipe networks	10
1.4. Overall approach for the network calculation	12
1.5. The Hazen–Williams equation for network analysis	13
1.6. Hazen–Williams and Darcy–Weisbach identity	15
1.7. Hardy–Cross method	18
1.8. Formulae	21
1.9. Questions	23
1.10. Problems with solutions	23
1.11. Problems to be solved	53
Chapter 2. Open Channel Flow	57
2.1. Introduction	57
2.2. Non-dimensional parameters in open channels	58
2.3. Open channel types of flow	59
2.4. Open channels' geometrical shapes	61
2.4.1. Channels of rectangular cross-sectional area	61
2.4.2. Channels of trapezoidal cross-sectional area	62
2.4.3. Channels of circular cross-sectional area	63
2.5. The hydraulic jump	65
2.6. Calculation of the depth flow after the hydraulic jump	65
2.7. Velocity distribution	68
2.8. Velocity distribution at the vertical level	68
2.9. Uniform flow in open channel equations – Chezy type	70

2.10. Best hydraulic cross-sectional area	75
2.11. Specific flow energy	79
2.12. Channels of rectangular cross-sectional area	80
2.13. Open channels' more adequate cross-sectional areas	83
2.13.1. Rectangular cross-sectional area	83
2.13.2. Trapezoidal cross-sectional area	85
2.14. Non-uniform flow in open channels	88
2.15. Channels of non-rectangular cross-section area	90
2.16. Formulae	92
2.16.1. Channels of rectangular cross-sectional area formulae	93
2.16.2. Channels of trapezoidal cross-section formulae	93
2.16.3. Channels of circular cross-sectional area formulae	94
2.16.4. Channels of rectangular cross-sectional area formulae	99
2.16.5. Channels of non-rectangular cross-sectional area formulae	100
2.17. Questions	101
2.18. Problems with solutions	103
2.19. Problems to be solved	116
Chapter 3. Boundary Layer	119
3.1. Introduction	119
3.2. Laminar incompressible boundary layer	120
3.3. Characteristic values of the boundary layer	125
3.3.1. Thickness δ of the boundary layer	125
3.3.2. The thickness displacement δ_1'	126
3.4. Flow types in the boundary layer	127
3.5. Formulae	131
3.6. Questions	133
3.7. Problems with solutions	133
3.8. Problems to be solved	145
Chapter 4. Flow Around Solid Bodies	147
4.1. Introduction	147
4.2. Geometrical characteristics of an airfoil	148
4.3. Kutta–Joukowski equation	150
4.4. Aerodynamic paradox	152
4.5. Pressure distribution in an airfoil	153
4.6. Lift curve	156
4.7. Drag force and drag coefficient curve	158
4.7.1. Drag of skin friction	158
4.7.2. Form drag	159
4.7.3. Induced drag	161

4.8. Parameters that influence the drag coefficient C_D	163
4.8.1. Dependence of C_D on the body's shape	163
4.8.2. Dependence of C_D on relative roughness	165
4.8.3. Dependence of C_D on the Reynolds number	170
4.9. External flow around industrial solid bodies	177
4.9.1. Car's motion.	177
4.9.2. Surface vessel's motion	178
4.9.3. Wind flow in ground constructions	179
4.9.4. Airplane's motion.	181
4.10. Drag in fluid drops and gas bubbles in creeping flow.	190
4.11. Formulae	191
4.12. Questions	193
4.13. Problems with solutions	196
4.14. Problems to be solved	209
Appendices	211
Appendix 1. Symbols and Units	213
Appendix 2. Tables and Diagrams of Natural Values	219
Appendix 3. Symbols and Basic Conversion Factors	237
Appendix 4. International Standard Atmosphere, SI Units	239
Appendix 5. International Standard Atmosphere, in BS	251
Appendix 6. NACA Airfoils' Diagrams	259
Bibliography	287
Index	289
