<b>Introduction</b>	ix
<b>Chapter 1. A Brief Overview of Linear Models</b>	1
1.1. Introduction	1
1.2. The standard linear model	3
1.3. Least squares estimator	4
1.3.1. The coefficient of determination $R^2$	10
1.4. The Gaussian linear model	11
1.4.1. Review of some properties of Gaussian distributions	13
1.4.2. Distributions of estimators	17
1.4.3. Confidence intervals	19
1.4.4. Hypothesis tests	21
1.5. Linear models in R	24
1.6. Asymptotic properties	31
<b>Chapter 2. Generalized Linear Models</b>	33
2.1. Exponential families	33
2.1.1. Definition, mean and variance	33
2.1.2. Examples	35
2.2. The components of a generalized linear model	41
2.2.1. Random component	41
2.2.2. Systematic component	41
2.2.3. Link function	42
2.3. Maximum likelihood estimator	42

2.3.1. Likelihood equations . . . . .	42
2.3.2. Case of a canonical link function . . . . .	45
2.3.3. Asymptotic properties and inference . . . . .	47
2.3.4. Newton–Raphson algorithm . . . . .	53
2.3.5. Estimation of the dispersion parameter . . . . .	55
2.3.6. Technical appendix . . . . .	56
2.4. Binomial regression . . . . .	57
2.4.1. Logit link function . . . . .	57
2.4.2. Estimation and statistical inference . . . . .	60
2.5. Poisson regression . . . . .	62
2.6. Generalized linear models in R . . . . .	63
2.6.1. Output of the <code>glm</code> function . . . . .	69
2.6.2. Tests between nested models . . . . .	71
2.6.3. Automatic variable selection . . . . .	73
<b>Chapter 3. Overdispersion in Count Data</b> . . . . .	77
3.1. Introduction . . . . .	77
3.2. The quasi-Poisson model . . . . .	82
3.2.1. Definition . . . . .	82
3.2.2. Quasi-maximum likelihood . . . . .	84
3.3. The negative binomial regression model . . . . .	88
3.3.1. The NB1 and NB2 variance functions . . . . .	90
3.3.2. Overdispersion tests . . . . .	91
3.4. Application to the NMES1988 data . . . . .	93
<b>Chapter 4. Count Data and Zero Inflation</b> . . . . .	103
4.1. Introduction . . . . .	103
4.1.1. Zero-inflated models . . . . .	103
4.1.2. Zero-inflated regression models . . . . .	118
4.2. ZIP regression model . . . . .	118
4.2.1. Definition . . . . .	118
4.2.2. Estimation in the ZIP model . . . . .	120
4.3. ZIB regression model . . . . .	126
4.3.1. Definition . . . . .	126
4.3.2. Estimation in the ZIB model . . . . .	127
4.4. Example of an application of the ZIP and ZIB models in healthcare economics . . . . .	134
4.4.1. The ZIB model . . . . .	134
4.4.2. ZIP model . . . . .	143

4.5. ZIM regression model . . . . .	148
4.5.1. An introductory example . . . . .	148
4.5.2. Definition of the model and estimation . . . . .	152
4.5.3. Identifiability . . . . .	156
4.5.4. Asymptotics . . . . .	160
4.5.5. Application to healthcare economics . . . . .	167
<b>References</b> . . . . .	173
<b>Index</b> . . . . .	179
