

## Table of Contents

<b>Preface</b> . . . . .	ix
<b>Acknowledgments</b> . . . . .	xi
<b>Chapter 1. Water: A Molecule Endowed with Extraordinary Physicochemical Properties</b> . . . . .	1
1.1. Molecular geometry and electrical properties . . . . .	1
1.2. Phase diagram . . . . .	3
1.3. Stable isotopes of hydrogen and oxygen . . . . .	11
1.4. Thermodynamic properties . . . . .	12
1.4.1. Conduction of heat . . . . .	20
1.5. Optical properties . . . . .	20
1.5.1. Turbidity, ternary mixtures and the “Ouzo” effect . . . . .	23
1.6. Underwater propagation of sound . . . . .	28
1.7. Synthesis and electrolysis . . . . .	30
1.8. Bibliography . . . . .	32
<b>Chapter 2. Theories about the Origin of Water on Earth</b> . . . . .	35
2.1. The blue planet of the solar system . . . . .	35
2.2. Comets . . . . .	38
2.3. Carbonaceous chondrites and icy asteroids . . . . .	42
2.4. Small magnitude evolution of the D/H ratio of the oceans . . . . .	47
2.5. Chemical composition of the primordial Earth’s oceans . . . . .	49
2.5.1. The early huge “greenhouse effect” . . . . .	49
2.5.2. pH and redox state of the primordial Earth’s oceans . . . . .	50
2.5.3. Archean ultramafic rocks: a trap for carbon dioxide . . . . .	52
2.5.4. The salinity of the primordial Earth’s oceans . . . . .	53
2.6. Bibliography . . . . .	55

<b>Chapter 3. The Main Water Reservoirs on Earth and their Chemical Composition</b> . . . . .	57
3.1. Masses of water reservoirs . . . . .	57
3.1.1. Ice caps . . . . .	60
3.1.2. Groundwaters . . . . .	61
3.1.3. Rivers . . . . .	63
3.1.4. Lakes . . . . .	65
3.1.5. Brackish waters . . . . .	67
3.1.6. Oceans . . . . .	68
3.1.7. Salinity . . . . .	70
3.1.8. The definition of water masses . . . . .	73
3.1.9. The wind-driven surface ocean circulation . . . . .	76
3.1.10. Thermohaline circulation: the global ocean conveyor . . . . .	80
3.2. The superficial hydrological cycle, water fluxes and residence times . . . . .	83
3.3. Chemical composition of rivers . . . . .	85
3.4. Ocean chemical composition . . . . .	90
3.4.1. Dissolved salts . . . . .	90
3.4.2. Dissolved gases . . . . .	91
3.4.3. Variations of dissolved O <sub>2</sub> and CO <sub>2</sub> with oceanic depth . . . . .	94
3.4.4. Brief concept of alkalinity . . . . .	94
3.4.5. The oceanic carbon pump and the pH of seawater . . . . .	94
3.5. Chemical composition of rainfall . . . . .	96
3.6. Why are oceans salty? . . . . .	100
3.7. Hypersaline waters . . . . .	102
3.7.1. The Dead Sea . . . . .	103
3.7.2. Mono Lake, USA . . . . .	105
3.8. Geothermal waters and the “petrifying springs” . . . . .	107
3.9. Bibliography . . . . .	109
<b>Chapter 4. Water and Plate Tectonics</b> . . . . .	113
4.1. A brief introduction to the theory of “plate tectonics” . . . . .	113
4.2. Catastrophic events related to global tectonics: tsunamis . . . . .	115
4.3. Oceanic hydrothermal activity . . . . .	123
4.4. Water in the Earth’s mantle . . . . .	137
4.4.1. Water in nominally anhydrous minerals . . . . .	137
4.4.2. IR spectroscopy or how to see water traces in mantle minerals . . . . .	139
4.5. Subduction and volcanic activity . . . . .	141
4.6. Continental growth and recycling . . . . .	146
4.7. Bibliography . . . . .	151

<b>Chapter 5. Water and Life</b> . . . . .	155
5.1. Cell functioning and metabolic activity . . . . .	155
5.1.1. Human body water, blood and pH . . . . .	156
5.1.2. Cell functioning . . . . .	157
5.1.3. Body water balance . . . . .	158
5.1.4. Body heat balance . . . . .	159
5.2. Adaptation and readaptation of tetrapods to the aquatic environment . . . . .	159
5.3. Biodiversity in the aquatic environment . . . . .	169
5.3.1. Freshwater biodiversity . . . . .	170
5.3.2. Marine biodiversity . . . . .	172
5.4. Bibliography . . . . .	176
 <b>Chapter 6. Stable Isotope Tracking: Water Cycles and Climates of the Past</b> . . . . .	 181
6.1. Principles of stable isotope fractionation between substances . . . . .	181
6.1.1. Quantum mechanics and isotopic fractionation . . . . .	181
6.1.2. Physicochemical processes responsible for isotopic fractionation . . . . .	183
6.1.3. Techniques of stable isotope measurements of aqueous solutions . . . . .	189
6.1.4. The “salt effect” and the isotopic measurement of brines . . . . .	190
6.2. The surface water cycle . . . . .	192
6.2.1. Isotopic fractionations during water evaporation and condensation . . . . .	197
6.2.2. Precipitation . . . . .	199
6.2.3. The concept of “amount effect” . . . . .	205
6.2.4. Geographic distribution of rainfall $\delta D$ and $\delta^{18}O$ values . . . . .	206
6.2.5. $\delta D$ and $\delta^{18}O$ variations of rainfall with altitude . . . . .	208
6.2.6. Rainfall $\delta D$ and $\delta^{18}O$ values as a function of air temperature . . . . .	210
6.2.7. The $\delta^{18}O$ of the sea surface waters . . . . .	214
6.2.8. S and $\delta^{18}O$ relationships in the ocean . . . . .	216
6.2.9. S and $\delta^{18}O$ relationships in the coastal waters . . . . .	217
6.3. The stable isotope memory of fossil biominerals . . . . .	220
6.3.1. Isotopic fractionation equation between biominerals and water . . . . .	220
6.3.2. Robustness of the isotopic record through time . . . . .	224
6.3.3. Tracking the ecology of extinct vertebrate species . . . . .	228

6.3.4. The aquatic environments of the Jurassic turtles of Western Europe . . . . .	230
6.3.5. Isotopic records of long-term climate changes . . . . .	233
6.3.6. Variations in the $\delta D$ and $\delta^{18}O$ of polar ice caps . . . . .	234
6.3.7. Isotopic records of climatic seasonal variations . . . . .	239
6.4. Aqueous inclusions trapped in minerals . . . . .	245
6.5. Bibliography . . . . .	250
<b>Index</b> . . . . .	255
