NOTATIONS	ix
INTRODUCTION	xi
CHAPTER 1. VISUAL TRACKING BY PARTICLE	
FILTERING	1
1.1. Introduction	1
1.2. Theoretical models	2
1.2.1. Recursive Bayesian filtering	2
1.2.2. Sequential Monte-Carlo methods	4
1.2.3. Application to visual tracking	8
1.3. Limits and challenges	18
1.4. Scientific position	22
1.5. Managing large sizes in particle filtering	22
1.6. Conclusion	26
CHAPTER 2. DATA REPRESENTATION MODELS	
2.1. Introduction	29
2.2. Computation of the likelihood function	30
2.2.1. Exploitation of the spatial redundancy	31
2.2.2. Exploitation of the temporal redundancy	42

2.3. Representation of complex information	50
2.3.1. Representation of observations for movement detection, appearances and disappearances	50
2.3.2. Representation of deformations	53
2.3.3. Multifeature representation	56
2.4. Conclusion	75
CHAPTER 3. TRACKING MODELS THAT FOCUS ON THE STATE SPACE	79
3.1. Introduction	79
3.2. Data association methods for multi-object tracking	80
3.2.1. Particle filter with adaptive classification	84
3.2.2. Energetic filter for data association	87
3.3. Introducing fuzzy information into the particle filter	95
3.3.1. Fuzzy representation	96
3.3.2. Fuzzy spatial relations	98
3.3.3. Integration of fuzzy spatial relations into the particle filter	99
3.4. Conjoint estimation of dynamic and static parameters	114
3.5. Conclusion	119
CHAPTER 4. MODELS OF TRACKING BY DECOMPOSITION OF THE STATE SPACE	123
4.1. Introduction	123
4.2. Ranked partitioned sampling	126
4.3. Weighted partitioning with permutation of sub-particles	133
4.3.1. Permutation of sub-samples	135
4.3.2. Decrease the number of resamplings	138
4.3.3. General algorithm and results	138
4.4. Combinatorial resampling	142
4.5. Conclusion	149

CHAPTER 5. RESEARCH PERSPECTIVES IN TRACKING AND MANAGING LARGE SPACES	151
5.1. Tracking for behavioral analysis: toward finer tracking of the “future” and the “now”	153
5.2. Tracking for event detection: toward a top-down model	156
5.3. Tracking to measure social interactions	159
BIBLIOGRAPHY	163
