

## Table of Contents

<b>Preface . . . . .</b>	<b>xi</b>
<b>Glossary . . . . .</b>	<b>xix</b>
<b>Chapter 1. Fracture Mechanisms by Fatigue . . . . .</b>	<b>1</b>
1.1. Introduction . . . . .	1
1.2. Principal physical mechanisms of cracking by fatigue . . . . .	2
1.2.1. Fracture mechanics . . . . .	2
1.2.2. Criteria of fracture (plasticity) in mechanics . . . . .	4
1.3. Modes of fracture . . . . .	7
1.3.1. Directed works . . . . .	11
1.4. Fatigue of metals: analytical expressions used in reliability . . . . .	13
1.4.1. Wöhler's law . . . . .	14
1.4.2. Basquin's law (1910) . . . . .	15
1.4.3. Stromayer's law (1914) . . . . .	16
1.4.4. Palmgren's law . . . . .	16
1.4.5. Corson's law (1949) . . . . .	17
1.4.6. Bastenaire's law . . . . .	17
1.4.7. Weibull's law . . . . .	18
1.4.8. Henry's law . . . . .	18
1.4.9. Corten and Dolen's law . . . . .	19
1.4.10. Manson–Coffin's law . . . . .	20
1.5. Reliability models commonly used in fracture mechanics by fatigue . . . . .	22
1.5.1. Coffin–Manson's model for the analysis of crack propagation . .	24
1.5.2. Neuber's relation (1958) . . . . .	25
1.5.3. Arrhenius' model . . . . .	28
1.5.4. Miner's law (1954) . . . . .	29

1.6. Main common laws retained by fracture mechanics . . . . .	31
1.6.1. Fost and Dugdale's law . . . . .	33
1.6.2. McEvily's law (1979) . . . . .	34
1.6.3. Paris's law . . . . .	35
1.6.4. G.R. Sih's law . . . . .	39
1.7. Stress intensity factors in fracture mechanics . . . . .	40
1.7.1. Maddox's model . . . . .	40
1.7.2. Gross and Srawley's model . . . . .	41
1.7.3. Lawrence's model . . . . .	41
1.7.4. Martin and Bousseau's model . . . . .	42
1.7.5. Gurney's model . . . . .	43
1.7.6. Engesvik's model . . . . .	43
1.7.7. Yamada and Albrecht's model . . . . .	44
1.7.8. Tomkins and Scott's model . . . . .	45
1.7.9. Harrison's model . . . . .	46
1.8. Intrinsic parameters of the material ( $C$ and $m$ ) . . . . .	46
1.9. Fracture mechanics elements used in reliability . . . . .	48
1.10. Crack rate (life expectancy) and s.i.f. ( $K_{\sigma}$ ) . . . . .	51
1.10.1. Simplified version of Taylor's law for machining . . . . .	54
1.11. Elements of stress ( $S$ ) and resistance theory ( $R$ ) . . . . .	55
1.11.1. Case study, part 2 – suspension bridge (Cirta) . . . . .	55
1.11.2. Case study: failure surface of geotechnical materials . . . . .	57
1.12. Conclusion . . . . .	65
1.13. Bibliography . . . . .	65
<b>Chapter 2. Analysis Elements for Determining the Probability of Rupture by Simple Bounds . . . . .</b>	<b>69</b>
2.1. Introduction . . . . .	69
2.1.1. First-order bounds or simple bounds: systems in series . . . . .	70
2.1.2. First-order bounds or simple bounds: systems in parallel . . . . .	70
2.2. Second-order bounds or Ditlevsen's bounds . . . . .	70
2.2.1. Evaluating the probability of the intersection of two events . . . . .	71
2.2.2. Estimating multinomial distribution–normal distribution . . . . .	74
2.2.3. Binomial distribution . . . . .	74
2.2.4. Approximation of $\phi_2$ (for $m \geq 3$ ) . . . . .	76
2.3. Hohenbichler's method . . . . .	78
2.4. Hypothesis test, through the example of a normal average with unknown variance . . . . .	80
2.4.1. Development and calculations . . . . .	82
2.5. Confidence interval for estimating a normal mean: unknown variance . . . . .	84

2.6. Conclusion . . . . .	85
2.7. Bibliography . . . . .	85
<b>Chapter 3. Analysis of the Reliability of Materials and Structures by the Bayesian Approach . . . . .</b>	<b>87</b>
3.1. Introduction to the Bayesian method used to evaluate reliability . . . . .	87
3.2. Posterior distribution and conjugate models . . . . .	88
3.2.1. Independent events . . . . .	91
3.2.2. Counting diagram . . . . .	95
3.3. Conditional probability or Bayes' law . . . . .	99
3.4. Anterior and posterior distributions . . . . .	103
3.5. Reliability analysis by moments methods, FORM/SORM . . . . .	106
3.6. Control margins from the results of fracture mechanics . . . . .	107
3.7. Bayesian model by exponential gamma distribution . . . . .	110
3.8. Homogeneous Poisson process and rate of occurrence of failure . . . . .	112
3.9. Estimating the maximum likelihood . . . . .	113
3.9.1. Type I censored exponential model . . . . .	113
3.9.2. Estimating the MTBF (or rate of repair/rate of failure) . . . . .	113
3.9.3. MTBF and confidence interval . . . . .	114
3.10. Repair rate or ROCOF . . . . .	117
3.10.1. Power law: non-homogeneous Poisson process . . . . .	118
3.10.2. Distribution law – gamma (reminder) . . . . .	119
3.10.3. Bayesian model of <i>a priori</i> gamma distribution . . . . .	122
3.10.4. Distribution tests for exponential life (or HPP model) . . . . .	124
3.10.5. Bayesian procedure for the exponential system model . . . . .	126
3.11. Bayesian case study applied in fracture mechanics . . . . .	131
3.12. Conclusion . . . . .	137
3.13. Bibliography . . . . .	138
<b>Chapter 4. Elements of Analysis for the Reliability of Components by Markov Chains . . . . .</b>	<b>141</b>
4.1. Introduction . . . . .	141
4.2. Applying Markov chains to a fatigue model . . . . .	142
4.3. Case study with the help of Markov chains for a fatigue model . . . . .	145
4.3.1. Position of the problem . . . . .	146
4.3.2. Discussion . . . . .	149
4.3.3. Explanatory information . . . . .	149
4.3.4. Directed works . . . . .	154
4.3.5. Approach for solving the problem . . . . .	155
4.3.6. Which solution should we choose? . . . . .	156
4.4. Conclusion . . . . .	157
4.5. Bibliography . . . . .	157

<b>Chapter 5. Reliability Indices . . . . .</b>	159
5.1. Introduction . . . . .	159
5.2. Design of material and structure reliability . . . . .	161
5.2.1. Reliability of materials and structures . . . . .	162
5.3. First-order reliability method . . . . .	165
5.4. Second-order reliability method . . . . .	165
5.5. Cornell's reliability index . . . . .	166
5.6. Hasofer–Lind's reliability index . . . . .	168
5.7. Reliability of material and structure components . . . . .	171
5.8. Reliability of systems in parallels and series . . . . .	172
5.8.1. Parallel system . . . . .	172
5.8.2. Parallel system (m/n) . . . . .	173
5.8.3. Serial assembly system . . . . .	173
5.9. Conclusion . . . . .	179
5.10. Bibliography . . . . .	179
<b>Chapter 6. Fracture Criteria Reliability Methods through an Integral Damage Indicator . . . . .</b>	181
6.1. Introduction . . . . .	181
6.2. Literature review of the integral damage indicator method . . . . .	185
6.2.1. Brief recap of the FORM/SORM method . . . . .	186
6.2.2. Recap of the Hasofer–Lind index method . . . . .	187
6.3. Literature review of the probabilistic approach of cracking law parameters in region II of the Paris law . . . . .	188
6.4. Crack spreading by a classical fatigue model . . . . .	190
6.5. Reliability calculations using the integral damage indicator method . . . . .	197
6.6. Conclusion . . . . .	199
6.7. Bibliography . . . . .	201
<b>Chapter 7. Monte Carlo Simulation . . . . .</b>	205
7.1. Introduction . . . . .	205
7.1.1. From the origin of the Monte Carlo method! . . . . .	205
7.1.2. The terminology . . . . .	206
7.2. Simulation of a singular variable of a Gaussian . . . . .	209
7.2.1. Simulation of non-Gaussian variable . . . . .	210
7.2.2. Simulation of correlated variables . . . . .	210
7.2.3. Simulation of correlated Gaussian variables . . . . .	210
7.2.4. Simulation of correlated non-Gaussian variables . . . . .	210
7.3. Determining safety indices using Monte Carlo simulation . . . . .	212
7.3.1. General tools and problem outline . . . . .	212

7.3.2. Presentation and discussion of our experimental results . . . . .	214
7.3.3. Use of the randomly selected numbers table . . . . .	215
7.4. Applied mathematical techniques to generate random numbers by MC simulation on four principle statistical laws . . . . .	220
7.4.1. Uniform law . . . . .	220
7.4.2. Laplace–Gauss (normal) law . . . . .	221
7.4.3. Exponential law . . . . .	222
7.4.4. Initial value control . . . . .	222
7.5. Conclusion . . . . .	231
7.6. Bibliography . . . . .	232
<b>Chapter 8. Case Studies . . . . .</b>	<b>235</b>
8.1. Introduction . . . . .	235
8.2. Reliability indicators ( $\lambda$ ) and MTBF . . . . .	235
8.2.1. Model of parallel assembly . . . . .	235
8.2.2. Model of serial assembly . . . . .	236
8.3. Parallel or redundant model . . . . .	237
8.4. Reliability and structural redundancy: systems without distribution . . . . .	239
8.4.1. Serial model . . . . .	239
8.5. Rate of constant failure . . . . .	240
8.5.1. Reliability of systems without repairing: parallel model . . . . .	243
8.6. Reliability applications in cases of redundant systems . . . . .	248
8.6.1. Total active redundancy . . . . .	252
8.6.2. Partial active redundancy . . . . .	253
8.7. Reliability and availability of repairable systems . . . . .	258
8.8. Quality assurance in reliability . . . . .	264
8.8.1. Projected analysis of reliability . . . . .	264
8.9. Birnbaum–Saunders distribution in crack spreading . . . . .	268
8.9.1. Probability density and distribution function (Birnbaum–Saunders cumulative distribution through cracking) . . . . .	269
8.9.2. Graph plots for the four probability density functions and distribution functions . . . . .	270
8.10. Reliability calculation for ages ( $\tau$ ) in hours of service, $R_i(\tau) = ?$ . . . . .	270
8.11. Simulation methods in mechanical reliability of structures and materials: the Monte Carlo simulation method . . . . .	275
8.11.1. Weibull law . . . . .	277
8.11.2. Log-normal Law (of Galton) . . . . .	278
8.11.3. Exponential law . . . . .	278
8.11.4. Generation of random numbers . . . . .	279
8.12. Elements of safety via the couple: resistance and stress (R, S) . . . . .	284
8.13. Reliability trials . . . . .	286

8.13.1. Controlling risks and efficiency in mechanical reliability . . . . .	288
8.13.2. Truncated trials . . . . .	291
8.13.3. Censored trials . . . . .	292
8.13.4. Trial plan . . . . .	293
8.13.5. Coefficients for the trial's acceptance plan . . . . .	296
8.13.6. Trial's rejection plan (in the same conditions) . . . . .	297
8.13.7. Trial plan in reliability and K Pearson test $\chi^2$ . . . . .	299
8.14. Reliability application on speed reducers (gears) . . . . .	300
8.14.1. Applied example on hydraulic motors . . . . .	303
8.15. Reliability case study in columns under stress of buckling . . . . .	305
8.15.1. RDM solution . . . . .	307
8.15.2. Problem outline and probabilistic solution (reliability and error) . . . . .	309
8.16. Adjustment of least squared for nonlinear functions . . . . .	311
8.16.1. Specific case study 1: a Weibull law with two parameters . . . . .	311
8.17. Conclusion . . . . .	314
8.18. Bibliography . . . . .	314
<b>Appendix . . . . .</b>	<b>317</b>
<b>Index . . . . .</b>	<b>333</b>
