

Table of Contents

Chapter 1. Challenges for End-to-End Quality of Service over Heterogenous Networks	1
Abdelhamid MELLOUK	
1.1. Introduction	1
1.2. Research challenges in end-to-end QoS	2
1.3. Contents	4
1.3.1. Chapter 2: principles and mechanisms for Quality of Service in networks.	4
1.3.2. Chapter 3: different approaches to guarantee Quality of Service	5
1.3.3. Chapter 4: Quality of Service-based adaptive routing approaches	6
1.3.4. Chapter 5: optical networks: new challenges and paradigms for Quality of Service.	7
1.3.5. Chapter 6: pushing Quality of Service across interdomain boundaries	8
1.3.6. Chapter 7: Internet-based collaborative teleoperation: towards tailorable groupware for teleoperation.	9
1.3.7. Chapter 8: survivability-oriented Quality of Service in optical networks	10
1.3.8. Chapter 9: MAC protocols for Quality of Service provisioning in mobile ad hoc networks.	10
1.3.9. Chapter 10: Quality of Service-based scheduling mechanisms in mobile networks	11
1.3.10. Chapter 11: Quality of Service in wireless ad hoc and sensor networks	12
1.3.11. Chapter 12: Quality of Service challenges in WiMAX networks	13
1.3.12. Chapter 13: Quality of Service support for MPLS-based wired-wireless domains.	14

1.3.13. Chapter 14: Quality of Service control in VoIP applications	15
1.3.14. Chapter 15: towards collaborative teleoperation based on human scale networked mixed reality environments	16
1.3.15. Chapter 16: Quality of Service driven context awareness using semantic sensors infrastructure	17
1.3.16. Chapter 17: effect of transmission delay on haptic perception in shared virtual environments	18
1.4. Conclusion	19
Chapter 2. Principles and Mechanisms for Quality of Service in Networks	21
Zoubir MAMMERI	
2.1. Introduction	21
2.2. Concepts and definitions	23
2.2.1. Definitions of QoS in a networking context.	23
2.2.2. End-to-end QoS	24
2.2.3. Classes (levels) of service	24
2.2.4. Differentiated classes of service	26
2.3. QoS parameters and application classification	26
2.3.1. QoS parameter types	26
2.3.2. Application classification	29
2.3.3. QoS parameter specification.	32
2.3.4. Traffic models	32
2.3.5. Service level agreements.	34
2.4. Mechanisms and functions for QoS provisioning.	35
2.4.1. General issues	35
2.4.2. QoS establishment	36
2.4.3. Admission control.	36
2.4.4. QoS negotiation and renegotiation	37
2.4.5. Resource management	38
2.4.6. QoS signaling protocols	39
2.4.7. Routing	39
2.4.8. Traffic control mechanisms	41
2.4.9. QoS control, maintenance, monitoring.	45
2.4.10. QoS policy	45
2.4.11. QoS mapping and translation	46
2.5. Overview of IntServ, DiffServ and MPLS.	47
2.5.1. Integrated services architecture	47
2.5.2. DiffServ architecture	48
2.5.3. MPLS	50

2.6. Conclusion	51
2.7. References.	51
Chapter 3. Different Approaches to Guarantee Quality of Service	55
Pascale MINET	
3.1. Introduction to QoS	55
3.1.1. Different QoS requirements	56
3.1.2. Organization of chapter	58
3.2. Means of managing an end-to-end time constraint.	59
3.2.1. Components of an end-to-end response time	59
3.2.2. Different methods to ensure that D is met.	61
3.2.3. Discussion	65
3.2.4. A producer/consumer scheme avoiding starvation	66
3.2.5. Example of a video-on-demand multimedia system.	67
3.3. Evaluation of the end-to-end response time.	68
3.3.1. The holistic approach.	68
3.3.2. Network calculus	69
3.3.3. Trajectory approach.	71
3.3.4. Comparison between the holistic and trajectory approaches.	74
3.3.5. Flow shaping.	77
3.4. Probabilistic guarantee of the end-to-end response time.	79
3.4.1. Principles for a probabilistic guarantee	79
3.4.2. Examples	80
3.4.3. Probabilistic versus deterministic guarantee	81
3.5. QoS support in a mobile ad hoc network.	81
3.5.1. Specificities of MANETs	81
3.5.2. The OLSR routing protocol	82
3.5.3. QoS architecture and QoS OLSR.	83
3.6. Conclusion and perspectives	87
3.7. References.	89
Chapter 4. Quality of Service-based Adaptive Routing Approaches.	93
Abdelhamid MELLOUK and Saïd HOCEINI	
4.1. Introduction.	93
4.2. QoS-based routing algorithms	95
4.2.1. Classical routing algorithms.	97
4.3. QoS-based routing approaches.	99
4.4. Inductive approaches based on machine learning paradigms	99
4.4.1. Cognitive Packet Networks (CPN).	100
4.4.2. Swarm ant colony optimization (AntNet).	100
4.4.3. Reinforcement learning routing approaches	101
4.5. Neural net-based approach for adaptive routing policy	102

4.6. State-dependent KOQRA algorithm	105
4.6.1. First stage: constructing K optimal paths	105
4.6.2. Second stage: optimizing the end-to-end delay with the Q-learning algorithm	107
4.6.3. Third stage: adaptive probabilistic path selection	108
4.7. Conclusion	108
4.8. References.	109
Chapter 5. Optical Networks: New Challenges and Paradigms for Quality of Service	115
Ken CHEN and Wissam FAWAZ	
5.1. Introduction	115
5.2. Optical communication: from transmission to networking	116
5.2.1. Fiber optic cable	116
5.2.2. WDM technology	117
5.2.3. From transmission to networking.	118
5.3. Optical networks as a pillar for future network infrastructure	119
5.4. Routing and wavelength assignment	121
5.5. GMPLS	122
5.5.1. MPLS	122
5.5.2. Principle of the GMPLS extension	124
5.5.3. GMPLS components	126
5.6. Towards a new optical link-based architecture	129
5.7. Protection against link failures.	130
5.8. Optical packet switch and optical burst switch	131
5.8.1. Optical packet switching	131
5.8.2. Optical burst switching	132
5.9. Conclusion	133
5.10. References	133
Chapter 6. Pushing Quality of Service Across Inter-domain Boundaries	135
Bingjie FU, Cristel PELSSER, Steve UHLIG	
6.1. Introduction	135
6.2. Background	136
6.2.1. The Internet as a distributed system.	137
6.2.2. Business relationships between ASs	137
6.2.3. Impact of inter-domain routing on path diversity	138
6.2.4. Inter-AS LSP requirements	142
6.3. RSVP-TE extensions to support inter-domain LSPs	143
6.3.1. Explicit routing of an LSP	143

6.3.2. RRO aggregation and the path key	144
6.3.3. Protection of inter-AS LSPs	145
6.3.4. End-to-end disjoint LSPs	146
6.4. State of the art in inter-domain PCE	146
6.4.1. PCE-based architecture.	146
6.4.2. Path computation methods.	147
6.4.3. Applicability of the path computation techniques	152
6.5. Towards inter-AS QoS.	152
6.5.1. Distributing QoS Information for inter-AS LSPs	153
6.5.2. Computing inter-AS LSPs with end-to-end QoS constraints.	155
6.6. Conclusion and perspectives	158
6.7. Acknowledgments	159
6.8. References.	159
Chapter 7. Internet-based Collaborative Teleoperation: Towards Tailorable Groupware for Teleoperation.	163
Samir OTMANE, Nader CHEAIB and Malik MALLEM	
7.1. Introduction	163
7.2. Teleoperation via the World Wide Web	164
7.2.1. Non-collaborative teleoperation systems	166
7.2.2. Towards collaborative teleoperation systems.	170
7.3. ARITI-C: a groupware for collaborative teleoperation via the Internet	172
7.3.1. Software architecture of ARITI-C	173
7.3.2. Human-machine interface of ARITI-C	177
7.4. Integrating QoS in designing tailorable collaborative teleoperation systems	185
7.4.1. Need for QoS in internet-based teleoperation.	185
7.4.2. Need for tailorability in internet-based collaborative teleoperation	186
7.4.3. Design of tailorable groupware for internet-based collaborative teleoperation	190
7.5. Conclusion	192
7.6. References.	193
Chapter 8. Survivability-Oriented Quality of Service in Optical Networks	197
Wissam FAWAZ and Ken CHEN	
8.1. Introduction	197
8.2. Optical transport network failures.	198
8.2.1. Failure statistics	199
8.2.2. Causes of failure.	200
8.3. Optical network survivability evolution	202
8.3.1. Survivability in traditional carrier network architecture	202
8.3.2. Protection at the IP layer?	204
8.3.3. Why optical layer survivability?.	205

8.4. Optical WDM-layer survivability mechanisms	207
8.4.1. Path protection	208
8.4.2. Path restoration	209
8.4.3. Link protection.	209
8.4.4. Link restoration	210
8.5. Conclusion	210
8.6. References.	211

Chapter 9. MAC Protocols for Quality of Service Provisioning in Mobile Ad Hoc Networks 213
 Ghalem BOUDOUR, Mahboub A. BALI and Cédric TEYSSIÉ

9.1. Introduction	213
9.2. IEEE 802.11 standard basics	216
9.3. Prioritization-oriented MAC protocols	217
9.3.1. RT-MAC protocol.	217
9.3.2. DCF-PC protocol	218
9.3.3. HCF and IEEE 802.11e	219
9.3.4. DPS protocol.	221
9.3.5. BB-DCF protocol	222
9.3.6. ES-DCF and DB-DCF protocols	224
9.4. Reservation-oriented protocols	226
9.4.1. Reservation protocols with synchronization	227
9.4.2. Reservation protocols without synchronization	231
9.4.3. Limitations of reservation-based protocols	235
9.5. Available bandwidth estimation methods for ad hoc networks.	235
9.5.1. General issues	235
9.5.2. Methods for bandwidth estimation	237
9.6. Conclusion	244
9.7. References.	245

Chapter 10. Quality of Service Scheduling Mechanisms in Mobile Networks 249
 Mohamed BRAHMA, Abdelhafid ABOUAÏSSA and Pascal LORENZ

10.1. Introduction	249
10.1.1. Mobile ad hoc networks (MANETs)	250
10.1.2. Constraints	251
10.2. Quality of Service	251
10.2.1. Routing with QoS in the ad hoc network	251
10.2.2. QoS models in ad hoc networks	252
10.2.3. QoS MAC protocols.	254

10.3. Buffer and energy-based scheduling	256
10.3.1. Marking MAC frames.	258
10.3.2. Adjusting the weight of each class queue	258
10.3.3. Weight calculation algorithm	259
10.4. Simulations and numerical results	260
10.5. Conclusion.	266
10.6. References	266
Chapter 11. Quality of Service in Wireless Ad Hoc and Sensor Networks	269
Azzedine BOUKERCHE, Horacio A.B.F. OLIVEIRA, Eduardo F. NAKAMURA, Richard W.N. PAZZI and Antonio A.F. LOUREIRO	
11.1. Challenges for QoS in ad hoc and sensor networks.	270
11.2. QoS parameters in ad hoc and sensor networks	271
11.3. Components of a QoS system	273
11.4. MAC measurement and reservation	274
11.4.1. Q-MAC.	277
11.5. QoS routing discovery and maintenance	278
11.5.1. Ticket-based probing	278
11.5.2. QoS-based geographic routing.	280
11.5.3. Core extraction distributed ad hoc routing – CEDAR	281
11.5.4. EQoS.	283
11.5.5. The INSIGNIA QoS framework	283
11.5.6. Ad hoc QoS on-demand routing –AQOR.	285
11.6. Conclusions	287
11.7. References	288
Chapter 12. Quality of Service Challenges in WiMAX Networks	291
Sahar GHAZAL and Jalel BEN-OTHTMAN	
12.1. Introduction	291
12.2. QoS limitations in wireless networks	293
12.3. QoS features in WiMAX networks	294
12.3.1. Classification process	294
12.3.2. Scheduling services	295
12.3.3. Bandwidth management policies	296
12.4. QoS parameter set and management messages	298
12.4.1. Connection establishment	299
12.4.2. Dynamic change of admitted QoS parameters	300
12.5. MAC layer and QoS architecture	301
12.6. PHY layer supports QoS	302
12.7. QoS previous proposed solutions for WiMAX	303
12.7.1. Proposed scheduling algorithms.	303
12.7.2. Proposed admission policies	304

12.8. Conclusion.	305
12.9. References.	305
Chapter 13. Quality of Service Support for MPLS-based Wired-Wireless Domains.	309
Scott FOWLER, Sherali ZEADALLY and Abdelhamid MELLOUK	
13.1. Abstract.	309
13.2. Introduction.	310
13.3. MPLS technology.	310
13.3.1. Label distribution protocol (LDP).	312
13.4. Mobility and MPLS.	314
13.5. Hierarchical MIP.	315
13.6. Extending MPLS from wired networks to wireless networks.	317
13.6.1. Hierarchical mobile MPLS (H-MPLS) approach.	317
13.6.2. Hierarchical mobile IPv6 with MPLS.	321
13.6.3. Micro-mobility with MPLS (MM-MPLS) approach.	326
13.6.4. The label edge mobility agent (LEMA) approach.	328
13.7. Multimedia support over MPLS-based networks.	329
13.7.1. MPLS support in DiffServ.	331
13.7.2. Resource reservation protocol traffic engineering (RSVP-TE) with MPLS.	335
13.7.3. Constraint-based routed label distribution protocol (CR-LDP).	336
13.8. Emerging trends of MPLS-based networks.	337
13.8.1. Label management of MPLS.	338
13.8.2. MPLS support over heterogeneous networks.	339
13.8.3. MPLS security.	339
13.8.4. QoS support over MPLS-based networks.	339
13.8.5. Fast handovers across MPLS-based wired-wireless networks.	340
13.9. Conclusion.	340
13.10. References.	342
13.11. Appendix – list of acronyms.	344
Chapter 14. Quality of Service Control in Voice-over IP Applications.	347
Vincent LECUIRE and Mouna BENAÏSSA	
14.1. Introduction.	347
14.2. General structure of VoIP applications.	348
14.3. End-to-end delay analysis.	351
14.3.1. Coding/decoding delay.	352
14.3.2. Packetization delay.	353
14.3.3. Network delay.	353

14.3.4. Jitter compensation delay	353
14.3.5. End-to-end delay calculation.	354
14.4. Quality of Service requirements for VoIP	354
14.4.1. Delay constraint	354
14.4.2. Packet loss constraint	355
14.4.3. Jitter constraint	356
14.5. Algorithms for adaptive playout buffering	357
14.5.1. Approach based on linear filtering	359
14.5.2. Approach based on adaptive filter.	363
14.5.3. Approach based on statistics distribution	364
14.6. Forward error correction mechanisms for packet loss repair	367
14.6.1. Media-specific FEC	368
14.6.2. Media-independent FEC	369
14.7. Joint playout buffering and packet-level FEC algorithms	370
14.7.1. Virtual delay algorithms	371
14.7.2. Delay aware algorithm	371
14.8. Conclusion.	372
14.9. References	372

Chapter 15. Towards Collaborative Teleoperation Based On Human-Scale Networked Mixed Reality Environments 377
 Samir OTMANE, Nassima OURAMDANE and Malik MALLEM

15.1. Introduction	377
15.2. Teleoperation and telerobotics	378
15.2.1. Brief background	379
15.2.2. Teleoperation	379
15.2.3. Telerobotics.	382
15.2.4. Some application domains	383
15.3. Augmented reality assisted teleoperation.	389
15.4. Human-scale collaborative teleoperation	393
15.4.1. Collaborative working environments	394
15.4.2. Interactions in human-scale teleoperation	395
15.4.3. Distributed software architecture for human-scale collaborative teleoperation	398
15.5. Synthesis and problematics	401
15.6. References	403

Chapter 16. QoS-driven Context Awareness Using Semantic Sensors Infrastructure 407
 Abdelghani CHIBANI and Yacine AMIRAT

16.1. Introduction	407
------------------------------	-----

16.2. Context-aware pervasive computing	408
16.3. Service agent middleware for decentralized context management	409
16.3.1. Context service agent	410
16.3.2. Context aggregation agent	411
16.3.3. Context services composition	413
16.4. Context service discovery	415
16.4.1. QoS-driven context directories management	416
16.4.2. Contextual knowledge modeling	416
16.4.3. Contextual service modeling	419
16.4.4. Context service semantic matching	420
16.5. Semantic context sensor scenarios	422
16.5.1. Scenario 1: context-aware travel organizer service.	423
16.5.2. Scenario 2: context-aware services for healthcare ubiquitous robot.	425
16.5.3. Scenario 3: context sensor infrastructure for living lab services	426
16.6. Conclusion.	427
16.7. References	428
Chapter 17. Effect of Transmission Delay on Haptic Perception in Shared Virtual Environments	431
Hichem ARIQUI	
17.1. Introduction	431
17.2. Haptic simulation in VR applications	433
17.2.1. Haptic feedback device	433
17.2.2. Applications of haptic systems	436
17.3. Delayed force feedback systems	437
17.3.1. Automatic control law, solutions and handicaps	437
17.3.2. Remote programming, solutions and handicaps	441
17.4. The Quality of Service for a good haptic rendering.	442
17.5. References	443
List of Authors	445
Index	451
