LIST OF ACRONYMS	xi
INTRODUCTION	xv
PART 1. RADIO-FREQUENCY IDENTIFICATIONS	1
CHAPTER 1. INTRODUCTION TO RFID	3
1.1. General introduction to RFID.	3
1.2. The RFID market	10
1.3. Issues in RFID.	12
1.3.1. Robustness of reading.	12
1.3.2. Tag prices	15
1.3.3. From identification toward sensor function	17
1.4. Conclusion.	18
1.5. Bibliography.	18
CHAPTER 2. ANTENNA DESIGN FOR UHF RFID TAGS	21
2.1. Introduction	21
2.2. Essential RFID parameters	21
2.2.1. Putting into equation of reader-tag links.	24
2.3. Discussions about the two chip impedance states Z_c^i	30

2.4. Rules of design for RFID antennas: classic design approach	33
2.4.1. Classic antenna design approach for passive UHF RFID tags	34
2.5. Robust RFID antenna design methodology.	41
2.5.1. Context of study	41
2.5.2. Description of principle applied	41
2.5.3. Principle of co-simulation	42
2.5.4. Taking into account of the environment, design of robust tags	43
2.5.5. Use of the cosimulation principle in the optimization process.	45
2.5.6. Generation of antenna forms	47
2.5.7. Application of the automated design tool via an example.	50
2.6. Conclusion.	56
2.7. Bibliography.	57
CHAPTER 3. NEW DEVELOPMENTS IN UHF RFID	61
3.1. Introduction	61
3.2. Wireless measurement technique for antenna impedance	62
3.2.1. Characterization of RFID chips and measurement of the two impedance states.	64
3.2.2. Theoretical approach to input impedance extraction from a small antenna based on the use of an RFID chip.	68
3.3. Toward the use of RFID as a sensor	79
3.3.1. Taking into account of downlink – increase of delta RCS.	85
3.3.2. Example of an RFID sensor	90
3.4. Conclusion.	92
3.5. Bibliography.	93
PART 2. CHIPLESS RFID	97
CHAPTER 4. INTRODUCTION TO CHIPLESS RFID	99
4.1. Introduction	99
4.2. Operating principle of chipless RFID	101

4.2.1. Description of the principle of chipless RFID	104
4.2.2. Example of C-shaped tag	108
4.3. Positioning of chipless RFID	112
4.3.1. Latest developments	112
4.3.2. Frequential tag and temporal tag: definition	115
4.3.3. Applicative positioning	116
4.4. Advantages	119
4.4.1. Different ideas to take into consideration	120
4.5. Conclusion	123
4.6. Bibliography	124
CHAPTER 5. DEVELOPMENT OF CHIPLESS RFID	127
5.1. Introduction	127
5.2. Coding capacity and density of chipless RFID tags	134
5.2.1. Performances of resonant patterns	135
5.2.2. Information coding techniques	136
5.2.3. Transmission and reception standards	137
5.3. Improvement of the robustness of detection of chipless RFID tags	139
5.3.1. REP approach (frequency domain)	142
5.3.2. Temporal approaches	153
5.4. Practical application of chipless RFID technology	164
5.4.1. Design of chipless RFID tags compatible with regulations	164
5.4.2. Cost of tags	165
5.4.3. Production of a reader for chipless technology	169
5.4.4. Chipless RFID at THz – the THID project	174
5.5. Conclusion	178
5.6. Bibliography	180

CHAPTER 6. PERSPECTIVES ON CHIPLESS RFID TECHNOLOGY	185
6.1. Introduction	185
6.2. Securing of information	186
6.3. Multiple readings	188
6.4. Chipless sensors.	190
6.4.1. Humidity sensors.	190
6.4.2. Deformation sensor	200
6.5. Reconfigurable chipless	208
6.5.1. Operating principle of CBRAM	209
6.5.2. Example of a reconfigurable chipless tag	211
6.6. Conclusion.	216
6.7. Bibliography.	217
CONCLUSION	223
