

Table of Contents

Chapter 1. Introduction to Ad Hoc Networks	1
1.1. Introduction	1
1.2. Wireless networks and communications	2
1.2.1. Wireless communications	2
1.2.2. Wireless networks	2
1.2.3. Classification of wireless networks	3
1.2.3.1. Classification by type of network architecture	4
1.2.3.2. Classification by extent of the zone covered.	5
1.2.3.3. Classification by means of access to the radio channel.	6
1.3. Ad hoc networks (MANET)	8
1.3.1. Characteristics and advantages	11
1.3.2. Applications	12
1.4. Routing of ad hoc networks	15
1.4.1. Hierarchical routing, flat routing and routing by geographic localization	16
1.4.2. Link-state, distance-vector and source-routing protocols	18
1.4.3. Proactive, reactive and hybrid routing	20
1.5. Conclusion	22
Chapter 2. Routing in MANETs.	23
2.1. Introduction	23

2.2. Internet routing protocols	24
2.2.1. Distance-vector routing protocols.	25
2.2.2. Link-state routing protocols	26
2.2.3. Unsuitability of Internet routing protocols for MANETs	27
2.3. Classification of routing protocols in MANET	28
2.3.1. Table-driven routing protocols	28
2.3.1.1. Destination-sequenced distance-vector routing (DSDV)	28
2.3.1.2. Optimized link-state routing protocol.	29
2.3.2. Reactive (on demand) routing protocols	34
2.3.2.1. Dynamic source-routing (DSR)	35
2.3.2.2. Ad hoc on-demand distance-vector.	36
2.3.3. Hybrid routing protocols	43
2.3.4. Hierarchical routing protocols	44
2.3.5. Geographic routing protocols	44
2.3.6. Routing protocols with power control	45
2.3.7. Multicast routing protocols	46
2.4. Conclusion	47
Chapter 3. Performance Evaluation of OLSR and AODV Protocols.	49
3.1. Introduction	49
3.2. The AODV protocol.	50
3.2.1. Route establishment	51
3.2.1.1. Path discovery	51
3.2.1.2. Reverse path setup	53
3.2.1.3. Forward path setup	53
3.2.1.4. Routing table management	55
3.2.2. Path maintenance	56
3.3. The OLSR protocol	58
3.3.1. Format of OLSR packets and node addresses	60
3.3.2. Operation of the protocol.	62
3.3.2.1. Neighborhood sensing	62
3.3.2.2. Topology management.	69
3.3.2.3. Routing.	72
3.4. Simulation environment	74
3.4.1. The ns-2 network simulator	75
3.4.2. Methodology.	76
3.4.3. Parameters to evaluate.	78
3.4.3.1. Average packet delay	78

3.4.3.2. Packet delivery success rate	79
3.4.3.3. Traffic overhead (TOH)	79
3.4.3.4. Route acquisition latency (RAL).	80
3.5. Results and analysis	80
3.5.1. Packet delivery ratio.	80
3.5.2. Average packet delay	83
3.5.3. Control traffic volume	84
3.5.4. Route acquisition latency.	85
3.6. Conclusion	86
Chapter 4. Quality of Service in MANETs	89
4.1. Introduction	89
4.2. QoS: a definition	90
4.2.1. QoS in wired networks	91
4.2.1.1. The IntServ/RSVP approach	92
4.2.1.2. The DiffServ approach	92
4.2.2. QoS in wireless networks.	93
4.2.2.1. QoS models	94
4.2.2.2. Signaling	95
4.2.2.3. Routing with QoS	96
4.2.2.4. MAC layer	100
4.3. The OLSRQSUP protocol and QoS extensions	100
4.3.1. Operation of the protocol	101
4.3.1.1. Delay	102
4.3.1.2. Bandwidth.	103
4.3.2. Sensing of neighborhood QoS parameters.	105
4.3.2.1. HELLO message extensions	106
4.3.2.2. Format of information base extensions	107
4.3.2.3. MPR selection algorithm	109
4.3.2.4. Topology management	112
4.3.2.5. Routing	113
4.4. Conclusion	113
Chapter 5. Implementation and Simulation	115
5.1. Introduction	115
5.2. Implementation	116
5.2.1. Use of the simulator	116
5.2.2. Implementation by steps	118
5.2.3. OLSRQSUP modules	119
5.2.4. Calculation of metrics	120

5.3. Simulation	121
5.3.1. Simulation parameters.	121
5.3.2. Parameters to evaluate.	122
5.3.3. Simulation results	123
5.3.3.1. Quantitative results	123
5.3.3.2. Impact of mobility and network density	127
5.3.3.3. Traffic impact	138
5.4. Conclusion	143
Chapter 6. Load Distribution in MANETs.	145
6.1. Introduction	145
6.2. Previous approaches to the load-sharing problem.	146
6.2.1. Approaches to load-sharing in multipath routing.	147
6.2.1.1. The multipath adaptative load balancing (MALB) mechanism.	149
6.2.2. Approaches to load-sharing in single-path routing.	152
6.2.3. Performance comparison of load-sharing approaches in single-path and multipath routing	152
6.2.3.1. Packet queues in single-path routing	153
6.2.3.2. Packet queues in multipath routing.	154
6.2.3.3. Commentary	155
6.3. Analytical study of the load-sharing problem in an ad hoc network with shortest-path routing	156
6.4. Proposition	161
6.4.1. Proactive routing protocols	161
6.4.1.1. Proposal for a new routing metric	164
6.4.1.2. Modification of the routing algorithm.	165
6.4.2. Reactive routing protocols.	166
6.4.2.1. Proposed new routing metric	168
6.4.2.2. Proposed handover mechanism	169
6.4.2.3. Modification of the routing algorithm.	170
6.5. Performance evaluation of proposed load-balancing mechanisms	171
6.5.1. Evaluation: load distribution.	172
6.5.2. Evaluation: end-to-end delay.	174
6.5.3. Evaluation: packet delivery fraction	176
6.6. Conclusion	177

Chapter 7. Energy Optimization in Routing	
Protocols	179
7.1. Introduction	179
7.2. Energy optimization techniques.	180
7.2.1. Energy consumption in ad hoc networks	180
7.2.2. Energy minimization methods for ad hoc networks.	181
7.2.2.1. The physical layer	181
7.2.2.2. The data liaison layer	182
7.2.2.3. The network layer	184
7.2.2.4. The transport layer	187
7.2.2.5. The application layer	188
7.3. Energy minimizing routing models in ad hoc networks	188
7.3.1. Minimum total transmission power routing	188
7.3.2. Minimum battery cost routing	190
7.3.3. Min–max cost routing	192
7.3.4. Conditional min–max battery capacity routing	193
7.3.4.1. SVSZ.	195
7.3.4.2. FVSZ	197
7.4. Comparison of energy consumption for an ad hoc network routing protocols simulated in ns-2.	198
7.4.1. The energy consumption model.	199
7.4.2. Simulation method	200
7.4.3. Simulation results	200
7.4.3.1. Basic scenario simulation	201
7.4.3.2. Pause time variation	202
7.4.3.3. Variation of maximum node velocity.	203
7.4.3.4. Variation in number of traffic sources.	205
7.4.3.5. Variation in number of nodes	206
7.4.3.6. Variation of test network surface.	207
7.4.3.7. Transfer debit variation	209
7.5. Conclusion	210
Chapter 8. Wi-Fi Access for Ad Hoc Networks	211
8.1. Introduction	211
8.2. Wi-Fi network structure.	212
8.2.1. The physical layer	213
8.2.1.1. Frequency hopping spread spectrum (FHSS).	214

8.2.1.2. Direct sequence spread spectrum (DSSS)	215
8.2.1.3. Orthogonal frequency division multiplexing (OFDM).	217
8.2.2. The data link layer	219
8.2.2.1. CSMA/CA	220
8.2.2.2. RTS/CTS.	221
8.2.2.3. Modes of access to the wireless channel	222
8.2.2.4. Additionl properties of the MAC and LLC layers.	224
8.3. Wi-Fi network architecture	225
8.3.1. Ad hoc mode	225
8.3.2. Infrastructure mode.	226
8.3.2.1. Communication with the AP.	227
8.3.2.2. Roaming	228
8.3.3. Grid mode	230
8.4. Wi-Fi norms	231
8.4.1. The 802.11a norm	231
8.4.2. The 802.11b norm	233
8.4.3. The 802.11e norm	233
8.4.4. The 802.11f norm	234
8.4.5. The 802.11g norm	234
8.4.6. The 802.11i norm	235
8.4.7. The 802.1x norm	235
8.4.8. The 802.11n specification	236
8.5. 802.11n migration	237
8.6. Conclusion	239
Bibliography	241
APPENDICES	247
Appendix 1. The Ad Hoc Networks Simulator (ANS)	249
Appendix 2. TCL Script of OLSRQSUP Protocol.	255
Appendix 3. Awk Script	261
Index.	265
