Preface xi

List of Acronyms xiii

Introduction xv
Hayfa ZGAYA and Slim HAMMADI

Chapter 1. Logistics Engineering 1
Hayfa ZGAYA and Slim HAMMADI

1.1. Introduction 1
1.2. Logistics: origins and evolution 2
1.2.1. Mathematical origin 2
1.2.2. Military origin 2
1.2.3. Evolution 3
1.3. Logistics Network: definitions, characteristics and complexity 5
1.3.1. Logistics 5
1.3.2. Logistics Process 5
1.3.3. Logistics System 7
1.3.4. Logistics Flow 7
1.3.5. SC and LN 9
1.3.6. Supply Chain Management 14
1.4. Logistics typology 17
1.4.1. According to space 17
1.4.2. According to the field 18

1.4.3. According to the function 18
1.4.4. According to the decision-making levels of an organization 19
1.5. Quality/logistics convergence 20
1.5.1. Logistics performances 20
1.5.2. Difficulties associated with the performance improvement of a LS 21
1.5.3. Decision-making 22
1.5.4. Discussion 24
1.6. Infologistics: information systems for logistics 25
1.6.1. Introduction 25
1.6.2. Evolution of ISL 26
1.6.3. Software resources of ISL 27
1.7. Possible resolution methods in favor of logistics 32
1.7.1. Approaches to modeling and simulation 33
1.7.2. Optimization approaches 43
1.7.3. Modeling and optimization for the benefit of logistics 49
1.8. Conclusion 53

Chapter 2. Case Studies and Contributions to the Resolution of Logistics System-related Problems 55

Hayfa ZGAYA and Slim HAMMADI

2.1. Introduction 55
2.2. Analogies between logistics systems 55
2.3. Transport logistics 56
2.3.1. Context 56
2.3.2. Problems 57
2.3.3. Chosen approaches 58
2.3.4. Outstanding results 66
2.4. Crisis management logistics 67
2.4.1. Context 67
2.4.2. Problem 68
2.4.3. Chosen approaches 71
2.4.4. Outstanding results 75
2.5. Warehouse logistics 77
2.5.1. Context 77
2.5.2. Problem 77
2.5.3. Chosen approaches 78
2.5.4. Outstanding results 79
2.6. Conclusion 80

Chapter 3. Health Logistics: Toward Collaborative Approaches and Tools 83

Hayfa ZGAYA, Slim HAMMADI and Jean-Marie RENARD

3.1. Introduction. 83
3.2. The health sector. 85
3.2.1. International context 85
3.2.2. The French context 86
3.2.3. The regional context (north of France) 88
3.3. Emergence of new needs 90
3.4. Health logistics. 90
3.4.1. Intra- and inter-Hospital Logistics 91
3.4.2. Challenges 93
3.5. Hospital emergency services. 95
3.5.1. The place of HES in the French health system. 96
3.5.2. Emergency services: a pivotal link and an alarming situation 97
3.5.3. Persistence of overcrowding risks at emergency services 99
3.5.4. Overcrowding at the French emergency services. 101
3.5.5. PES: reality and challenges 102
3.6. Hospital and healthcare information systems 106
3.7. Analogy between conventional and healthcare logistics 107
3.8. Conclusion 109

Chapter 4. Collaborative Workflow for Patient Pathway Modeling at Pediatric Emergency Services 111

Sarah Ben OTHMAN, Inès AJMI and Alain QUILLIOT

4.1. Introduction. 111
4.2. Definition of workflow 111
4.3. Why use a “workflow approach” in health?. 113
4.4. Description of a workflow diagram type. 114
4.5. Health collaborative workflow 115
4.6. Inter-operability concepts for health collaborative workflows 115
4.7. Patient pathway description for PES (CHRU de Lille) 117

4.8. PES infrastructure 119
4.8.1. Evaluation 119
4.8.2. PES management 120
4.8.3. Staff 120
4.9. Collaborative workflow for modeling patient pathway in the steady state 121
4.9.1. General functionalities of PES 121
4.9.2. Process modeling 122
4.9.3. Global process 123
4.9.4. Sub-processes 123
4.9.5. Modeling under the overcrowding state 125
4.9.6. Collaborative workflow for patient pathway during overcrowding 125
4.9.7. Choice of transitions and configuration 126
4.9.8. Connectors 128
4.10. Agent-oriented approach for collaborative workflow 128
4.11. Agent coalition for executing collaborative workflow 129
4.12. Negotiation protocol between agents controlling a workflow instance 130
4.13. Global coherence and periodic behavior of collaborative workflow 132
4.13.1. Respect of global coherence 133
4.13.2. Treatment of oscillating states 133
4.14. Treatment of generated collaborative workflow decision points 134
4.15. Summary 135
4.16. Agent activities for collaborative workflow 135
4.17. Conclusion 137

Chapter 5. Agent-based Architecture for Task Scheduling and Dynamic Orchestration Support 139

Sarah Ben OTHMAN, Inès AJMI and Alain QUILLIOT

5.1. Introduction 139
5.2. Mathematical formulation of the scheduling problem at PES 140
5.2.1. Parameters 142
5.2.2. Variables 144
5.2.3. Institutional parameters 144

5.2.4. The objective function 145
5.2.5. The constraints 146
5.2.6. Criteria 147
5.3. Multiple competence task 148
5.4. Agent-based modeling 150
5.4.1. Reception Agent's behavior. 152
5.4.2. PIA's behavior 153
5.4.3. TA's behavior 154
5.4.4. Resource Agent's behavior 155
5.4.5. IEA's behavior 155
5.4.6. MSA's behavior. 156
5.4.7. SA's behavior 158
5.5. Description of a SA's behavior 159
5.5.1. Different phases in the behavior of the SA 160
5.5.2. Allocation algorithm 161
5.5.3. Evolutionary algorithm 163
5.5.4. Crossover operations 164
5.5.5. Mutation operators 166
5.5.6. Selection operators 167
5.6. Dynamic aggregative approach for evaluating fitness function. 167
5.7. Workflow orchestration 170
5.7.1. Definitions and concepts. 170
5.7.2. Health orchestration 170
5.7.3. Dynamic orchestration architecture 171
5.7.4. Performance evaluation of dynamic orchestration 173
5.8. Simulation and results 174
5.8.1. Choice of the multi-agent platform 174
5.8.2. Functionalities and configuration 176
5.8.3. Developed dynamic orchestration system 178
5.8.4. Interface implementation of the developed system 178
5.9. Simulation and scheduling results: the SA's behavior 181
5.9.1. The impact of dynamic orchestration on Workflow 187
5.10. Conclusion 190

General Conclusion and Perspectives 193
Hayfa ZGAYA and Slim HAMMADI
