Notation	ix
Introduction	xvii
Chapter 1. An Introduction to Aerosols	1
Dominique THOMAS and Augustin CHARVET	
1.1. Characteristics of a gaseous medium	2
1.1.1. Mean free path	2
1.1.2. The Knudsen number	4
1.2. Inertial parameters	4
1.2.1. Drag force	5
1.2.2. Drift in a force field	9
1.3. Diffusional parameter	15
1.4. Equivalent diameter	15
1.4.1. Mass equivalent diameter, d_M	16
1.4.2. Volume equivalent diameter, d_V	16
1.4.3. Electrical mobility diameter, d_{me}	17
1.4.4. Stokes diameter, d_{St}	17
1.4.5. Aerodynamic diameter, d_{ae}	17
1.4.6. Relating the different diameters	18
1.5. Nanostructured particles	22
1.5.1. Quasi-fractal particles	23
1.6. Bibliography	26

Chapter 2. Fibrous Media 31

Jean-Christophe APPERT-COLLIN and Dominique THOMAS

2.1. Introduction	31
2.2. Manufacturing processes for non-woven media	32
2.2.1. Forming the web	34
2.2.2. Consolidation of the layer of fibers	35
2.2.3. Special processes	36
2.2.4. Summary	37
2.3. Developing “high-performing” fibers	37
2.3.1. Electret fiber	38
2.3.2. Electrospinning	38
2.3.3. Special fibers	38
2.4. Characterization of fibrous media	39
2.4.1. Grammage	39
2.4.2. Thickness	39
2.4.3. Packing density	40
2.4.4. Diameter of the fibers	41
2.5. From web to filter	42
2.5.1. Protective respiratory equipment	43
2.5.2. General ventilation air filters	44
2.5.3. Air intake system filters	46
2.6. Bibliography	46

Chapter 3. Initial Pressure Drop for Fibrous Media 49

Nathalie BARDIN-MONNIER and Dominique THOMAS

3.1. Pressure drop across a flat media	49
3.1.1. $f(\alpha)$ models based on the nature of the flow	52
3.1.2. Comparison of models with experiments	57
3.1.3. Comparison of models versus simulations	58
3.1.4. The impact of heterogeneity of fibrous media on pressure drop	60
3.2. Pressure drop for pleated fibrous media	63
3.2.1. Rigid pleats	64
3.2.2. Non-rigid pleats	75
3.3. Bibliography	76

Chapter 4. Initial Pressure Efficiency of a Fibrous Media . . . 79

Dominique THOMAS

4.1. Introduction	79
4.2. Estimating efficiency	81
4.3. Single fiber efficiency	84
4.3.1. Studying flow around a fiber and a collection of fibers	86
4.3.2. Single fiber efficiency for diffusion	88
4.3.3. Single fiber efficiency for interception	91
4.3.4. Single fiber efficiency for impaction	92
4.3.5. Single fiber electrostatic collection efficiency	99
4.3.6. Particle rebound	101
4.4. Overall filter efficiency	104
4.4.1. Experimental model comparisons	104
4.4.2. Estimating the MPPS and minimum single fiber efficiency	110
4.4.3. Impact of the heterogeneity of media on efficiency	110
4.5. Conclusion	116
4.6. Bibliography	117

Chapter 5. Filtration of Solid Aerosols 123

Dominique THOMAS

5.1. Overview	123
5.2. Depth filtration	125
5.2.1. Pressure drop	125
5.2.2. Efficiency	132
5.3. Transition zone between depth filtration and surface filtration	133
5.4. Surface filtration	136
5.4.1. Structure of the deposit	136
5.4.2. Packing density of the deposit	140
5.4.3. Pressure drop across a particle deposit	143
5.5. Reduction in filtration area	146
5.6. Full models	148
5.6.1. The Thomas model	148
5.6.2. The Bourrous model	150
5.7. Influence of humidity in the air	152
5.7.1. Hygroscopic particles	153

5.7.2. Non-hygroscopic particles	154
5.8. Bibliography	156
Chapter 6. Filtration of Liquid Aerosols	161
Augustin CHARVET and Dominique THOMAS	
6.1. Overview	161
6.2. Clogging by liquid aerosols	162
6.2.1. Fate of a liquid aerosol in a filter	162
6.2.2. Stages in the filtration of a liquid aerosol	168
6.2.3. Influence of operating conditions	170
6.3. Clogging models	173
6.3.1. Modeling the efficiency of a filter during clogging	173
6.3.2. Modeling the pressure drop across a filter during clogging	179
6.4. Binary mixture of liquid and solid aerosols	181
6.5. Conclusion	184
6.6. Bibliography	185
Appendix	189
Index	203
