

Table of Contents

Preface	ix
Chapter 1. Machinability: Existing and Advanced Concepts	1
Viktor P. ASTAKHOV	
1.1. Introduction.	2
1.2. Traditional concepts of machinability and methods for its assessment .	3
1.2.1. Common perceptions.	3
1.2.2. Non-standardized tests for machinability assessment.	5
1.2.3. Standard tests	9
1.2.4. Assessments used in machining practice	15
1.2.5. The merit of the known concepts of machinability	16
1.3. Knowledge-based foundations of machinability	16
1.3.1. Practical need	16
1.3.2. Ability of the prevailing metal cutting theory	17
1.3.3. Notion of two kinds of machinability	18
1.3.4. Machinability of the work material	19
1.3.5. Process machinability	31
1.3.6. Improvement the process machinability	35
1.4. Bibliography	54
Chapter 2. Milling Burr Formation and Avoidance	57
Seyed A. NIKNAM, Walery WYGOWSKI, Marek BALAZINKSI and Victor SONGMENE	
2.1. Introduction	57
2.1.1. Definition and classification of burrs	58
2.1.2. Factors governing milling burr formation	62
2.1.3. Burr formation modeling and control	63
2.1.4. Burr avoidance and removal (deburring)	64

2.2. Case study 1: burr formation during slot milling of aluminum alloys.	69
2.2.1. Introduction	69
2.3. Case study 2: burr limitation and tool path planning strategies – application to the slot milling of AM6414 steel	77
2.3.1. Burr size estimation during slot milling (approaches CH1, CH2 and CH3).	78
2.3.2. Conclusion on case study 2 – burr limitation during slotting	86
2.4. General concluding remarks	86
2.5. Acknowledgments.	87
2.6. Bibliography	87
Chapter 3. Machinability of Titanium and Its Alloys	95
Ali HOSSEINI, Hossam A. KISHAWY and Hussein M. HUSSEIN	
3.1. Introduction.	95
3.2. Titanium: a brief overview.	97
3.3. Titanium alloys.	97
3.4. Challenges toward machining titanium	99
3.4.1. Low modulus of elasticity.	99
3.4.2. Poor thermal conductivity.	99
3.4.3. Chemical reactivity.	101
3.4.4. Hardening characteristics	101
3.5. Mechanics of chip formation	101
3.6. Cutting forces and power consumption	104
3.7. Cutting tools and wear phenomenon	105
3.7.1. High-speed steel tools	107
3.7.2. Carbide tools.	108
3.7.3. Ceramic tools	111
3.7.4. Cubic boron nitride (CBN) tools	112
3.8. Application of coolant	112
3.9. Surface integrity	113
3.10. Concluding remarks	114
3.11. Bibliography	115
Chapter 4. Effects of Alloying Elements on the Machinability of Near-Eutectic Al-Si Casting Alloys	119
Yasser ZEDAN, Saleh A. ALKAHTANI and Fawzy H. SAMUEL	
4.1. Introduction.	119
4.2. Alloy preparation and casting procedures	122
4.2.1. Metallography-microstructural examination	123
4.2.2. Mechanical tests	124
4.2.3. Machining procedures	124
4.2.4. Total drilling force	124

4.2.5. Tool life criteria	125
4.3. Results	125
4.3.1. Microstructures	125
4.3.2. Hardness and tensile properties.	129
4.3.3. Machining behavior	130
4.4. Discussion	136
4.5. Conclusions.	141
4.6. Acknowledgments.	142
4.7. Bibliography	142
Chapter 5. The Machinability of Hard Materials – A Review.	145
Paulo CAMPOS, J. Paulo DAVIM, J. Roberto FERREIRA, A. Paulo PAIVA and P. Paulo BALESTRASSI	
5.1. Introduction.	145
5.1.1. Definition of hard machining.	145
5.1.2. Application of hard machining processes.	146
5.2. Cutting tools	149
5.2.1. Ceramics	149
5.2.2. Cubic boron nitride (CBN)	149
5.3. Wiper technology	151
5.4. Machinability.	152
5.4.1. Cutting parameters	152
5.4.2. Cutting forces	155
5.4.3. Chip formation	156
5.4.4. Cutting temperature	157
5.5. Surface integrity in hard machining processes	159
5.5.1. Surface integrity	159
5.5.2. Surface roughness	161
5.5.3. Residual stresses	162
5.5.4. White-layer effect.	162
5.6. Optimization of hard machining processes	163
5.7. Synthesis	165
5.8. Acknowledgments.	166
5.9. Bibliography	166
Chapter 6. An Investigation of Ductile Regime Machining of Silicon Nitride Ceramics	175
Vijayan KRISHNARAJ and S. Senthil KUMAR	
6.1. Introduction.	175
6.2. Ceramic machining	176
6.2.1. Machining forces	177
6.2.2. Surface quality	177

6.2.3. Machining model	178
6.3. Ductile regime machining	181
6.3.1. Factors contributing to the ductile-regime machining of ceramics	182
6.4. Developments in simulations of ceramic machining.	185
6.4.1. Material model for simulations	186
6.4.2. Elastic and plastic behavior	188
6.4.3. Heat transfer and thermal softening	188
6.4.4. Strain rate sensitivity	189
6.4.5. Determination of initial yield stress	191
6.4.6. Material model validation	192
6.4.7. Simulation model of AdvantEdge®	193
6.4.8. Work material properties	195
6.4.9. Wear model	198
6.4.10. Process parameters	198
6.4.11. Convergence	199
6.5. Design of experiments	199
6.5.1. Tabulation of results	199
6.5.2. Results and discussion	201
6.6. Effect of the depth of cut	203
6.7. Effect of the feed rate	205
6.7.1. Summary	206
6.8. Materials and means	206
6.8.1. Hardness test.	206
6.8.2. Fracture toughness K_{IC} – micro indentation test	208
6.8.3. Elastic modulus – semi-empirical relation	209
6.8.4. Material preparation	210
6.8.5. Fixture base	210
6.8.6. Gluing the ceramic to the fixture base.	211
6.8.7. PCD end mill tool.	211
6.9. Experimental set-up	213
6.9.1. Results and discussion	214
6.9.2. Effect of the depth of cut	216
6.9.3. Effect of the feed rate	218
6.9.4. Surface roughness	219
6.9.5. Analysis of variance	220
6.9.6. Resultant force	220
6.9.7. Surface roughness	221
6.9.8. Summary	223
6.10. Bibliography	223
List of Authors	229
Index	233
