<b>Introduction</b> . . . . .	ix
<b>Chapter 1. Topology Optimization Framework for Multiscale Nonlinear Structures</b> . . . . .	1
1.1. FE <sup>2</sup> method . . . . .	2
1.2. Periodic boundary conditions . . . . .	4
1.3. Finite element discretization . . . . .	6
1.4. Topology optimization model . . . . .	8
1.4.1. Model definitions . . . . .	8
1.4.2. Sensitivity analysis . . . . .	10
1.4.3. BESO updating scheme . . . . .	11
1.5. Multiscale design framework . . . . .	12
1.6. Numerical examples . . . . .	13
1.6.1. Design of a nonlinear homogeneous structure . . . . .	14
1.6.2. Design of a nonlinear heterogeneous structure . . . . .	15
1.7. Concluding remarks . . . . .	19
<b>Chapter 2. POD-based Adaptive Surrogate for the Design of Multiscale Structures</b> . . . . .	21
2.1. Multiscale design framework . . . . .	22
2.1.1. Discrete level set model . . . . .	22
2.1.2. Optimization model . . . . .	23

2.2. POD-based adaptive surrogate . . . . .	25
2.2.1. Snapshot POD . . . . .	25
2.2.2. Interpolation of the projection coefficients . . . . .	27
2.2.3. Adaptive POD-based surrogate . . . . .	27
2.3. Numerical examples . . . . .	30
2.3.1. Test case 1 . . . . .	30
2.3.2. Test case 2 . . . . .	33
2.4. Concluding remarks . . . . .	36
 <b>Chapter 3. Topology Optimization of Multiscale Elastoviscoplastic Structures</b> . . . . .	39
3.1. Topology optimization model . . . . .	40
3.1.1. Model definitions . . . . .	40
3.1.2. Sensitivity analysis . . . . .	42
3.1.3. BESO updating scheme . . . . .	45
3.2. Microscopic modeling . . . . .	47
3.2.1. Elastoviscoplastic porous material . . . . .	48
3.2.2. Estimation of the computational complexity . . . . .	50
3.2.3. Model reduction using the pRBMOR . . . . .	51
3.2.4. Implementation of pRBMOR . . . . .	53
3.3. Numerical examples . . . . .	54
3.3.1. Linear elastic topology optimization . . . . .	56
3.3.2. Nonlinear structural design using FE <sup>2R</sup> . . . . .	57
3.3.3. Investigation of the influence of the load amplitude . . . . .	60
3.3.4. Comparison to linear designs . . . . .	64
3.4. Concluding remarks . . . . .	65
 <b>Chapter 4. Simultaneous Topology Optimization of Structure and Materials</b> . . . . .	67
4.1. Problem statement and decomposition . . . . .	68
4.2. Initial stiffness NR solution scheme . . . . .	70
4.3. Topology optimization models . . . . .	72
4.3.1. Model definitions . . . . .	72
4.3.2. Decomposed optimization models . . . . .	74
4.3.3. BESO updating scheme . . . . .	76
4.3.4. Simultaneous design framework . . . . .	76
4.4. Numerical examples . . . . .	78
4.4.1. Cellular material designs . . . . .	78

---

4.4.2. Material design of a bridge-type structure . . . . .	79
4.4.3. Simultaneous design of a bridge-type structure . . . . .	80
4.4.4. Simultaneous design of a half MBB beam . . . . .	85
4.5. Concluding remarks . . . . .	87
<b>Chapter 5. Reduced Database Model for Material Microstructure Optimizations</b> . . . . .	89
5.1. Simultaneous design framework . . . . .	90
5.2. Generalized material constitutive behavior . . . . .	91
5.3. Reduced database model (NEXP) . . . . .	93
5.3.1. Basic reduction strategy . . . . .	93
5.3.2. Notations and test space . . . . .	94
5.3.3. Separation of variables and interpolation . . . . .	96
5.4. Structural topology optimization . . . . .	98
5.5. General design algorithm . . . . .	100
5.6. Numerical examples . . . . .	100
5.6.1. Preliminary numerical tests . . . . .	101
5.6.2. Design of a two-scale bridge-type structure . . . . .	104
5.6.3. Design of a finely discretized two-scale bridge-type structure . . . . .	109
5.6.4. Design of a two-scale half MBB beam with fine discretization . . . . .	110
5.7. Concluding remarks . . . . .	113
<b>Conclusion and Perspectives</b> . . . . .	115
<b>Appendix</b> . . . . .	119
<b>Bibliography</b> . . . . .	145
<b>Index</b> . . . . .	161
