Preface xix

Introduction xxiii
Simon COHEN and George YANNIS

Part 1. Data Collection 1

Chapter 1. A Review of Statewide Traffic Data Collection, Processing, Projection and Quality Control 3
Rafiqul TAREFDER and James BROGAN

1.1. Introduction 3
1.2. Current traffic data collection in New Mexico 4
1.2.1. Data collection at the NMDOT ITS Bureau 7
1.2.2. Other agency programs 7
1.2.3. Current WIM technology in NM 8
1.3. NMDOT data processing and reporting 9
1.3.1. Summary of New Mexico practice 10
1.4. Traffic data projection and quality control 10
1.4.1. In-person interviews 11
1.4.2. Additional written interviews 14
1.4.3. NMDOT project panel responses 16
1.5. Conclusions 17
1.6. Acknowledgments 17
1.7. Bibliography 18

Chapter 2. SYNCRO – An Innovative Public Procurement of an Advanced Data Gathering System for Interurban Roads Based on its Technologies 19

Jean-Christophe MAISONOBE, Jean Daniel DEMOND, Giannicola MARENGO, Dolores ADAMSKI, Diego ALBESANO and Olivier LATOUILLE

2.1. Introduction 19
2.2. Elaboration of the SYNCRO technical vision: the SYNCRO functional program 21
2.2.1. Innovation for more complete data collection by a single system 21
2.2.2. Innovation for enabling massive deployment across an interurban road network 22
2.2.3. Transition toward cooperative systems 23
2.3. A system to gather road data and to provide the current operational road management center with data 24
2.4. Impact and potential of the SYNCRO system 26
2.4.1. Possible impact of SYNCRO project 26
2.4.2. Exploration of a diversified technological offering 27
2.5. An innovative legal framework to implement three phases of the SYNCRO project 27
2.5.1. Purchasing innovation thanks to a competitive dialogue 29
2.5.2. A two-phase procurement: a pilot system and a final system 29
2.5.3. A coordinated transnational procurement 30
2.6. Conclusion 30
2.7. Acknowledgments 32

Chapter 3. Tailoring a Reference Model for C-ITS Architectures and Using a DATEX II Profile to Communicate Traffic Signal Information 33

Jörg FREUDENSTEIN and Ian CORNWELL

3.1. Introduction 33
3.2. Architecture of intelligent transport systems 34
3.2.1. The ITS pyramid 35
3.3. A generic C-ITS architecture 36
3.4. A tailored architecture for the use case “Traffic Light Phase Assistant” 39
3.4.1. Scenario via service provider 39
3.5. A DATEX II profile to communicate traffic light information 41
3.6. Summary 43
3.7. Bibliography 44

Chapter 4. Sensor City Mobility: The City of Assen as a "Living Lab" for Smart Mobility Solutions Using Sensor Data 45
Jan BURGMEIJER, Janiek DE KRUIJFF, Ernst Jan VAN ARK, Gerdien KLUNDER and Diana VONK NOORDEGRAAF

4.1. Introduction 45
4.1.1. What is necessary for travel information and traffic management? 46
4.1.2. Why is a real-life test necessary? 46
4.1.3. What is meant by Sensor City? 47
4.1.4. Constructing the consortium and selecting the partners. 47
4.2. Architecture, sensor network and technologies used 48
4.2.1. General architecture 48
4.2.2. Sensor network in Assen 49
4.2.3. Technologies used 50
4.3. Use cases for mobility 51
4.3.1. Multimodal travel information and guidance 51
4.3.2. Dynamic traffic management in-car 51
4.3.3. Parking guidance services 52
4.3.4. Driving style monitor for safe and eco-friendly driving 52
4.3.5. The "TravelAlert" smartphone application 53
4.4. Modeling 54
4.4.1. Online modeling 54
4.4.2. Offline modeling 54
4.4.3. Smart Routing 56
4.4.4. Calibration and validation 56
4.5. Preliminary results and evaluation of the experiment 57
4.6. Acknowledgments 58
4.7. Bibliography 59

Part 2. Traffic Modeling and Simulation 61

Chapter 5. Forecasting Capabilities of a Micro-Simulation Method for Trip Generation 63
Jorge CABRERA DELGADO and Patrick BONNEL

5.1. Introduction 63
5.2. Methodology 65
5.2.1. Data 65
5.2.2. Micro-simulation procedure 66
5.3. Results 72
5.3.1. Typology from CHAID. 72

5.3.2. Forecasting capability 72
5.4. Conclusion 75
5.5. Acknowledgments 75
5.6. Bibliography 75

Chapter 6. Modeling and Solving International Journey Planning Problems 79

Konstantinos N. ANDROUTSOPOULOS and Konstantinos G. ZOGRAFOS

6.1. Introduction 79
6.2. Defining international itinerary planning problems 80
6.2.1. Elementary international multimodal itinerary planning problems 80
6.2.2. International round-trip itinerary planning problem 81
6.2.3. International multiple-trip itinerary planning problem. 82
6.2.4. International trip itinerary contingency planning problem 82
6.2.5. International dynamic itinerary re-planning problem 83
6.3. Modeling issues 83
6.4. Previous related work 85
6.5. Algorithmic approach 87
6.5.1. Customized network 88
6.5.2. Solution algorithm for the elementary international itinerary planning problem 89
6.5.3. Solution algorithm for the international round-trip and multi-trip itinerary planning problem 91
6.6. Concluding remarks 92
6.7. Acknowledgments 92
6.8. Bibliography 92

Chapter 7. Optimized Intermodal Roundtrips in Transport Networks 95

Cecília VALE and Isabel RIBEIRO

7.1. Introduction 95
7.2. Model description 96
7.3. Computational applications 98
7.3.1. Data 98
7.3.2. Results 100
7.4. Conclusions 102
7.5. Bibliography 103

Chapter 8. Modeling Traffic Hindrance Caused by Road Construction as Part of a Multicriteria Assessment Framework 105
Eric VAN BERKUM and Henny TER HUERNE

8.1. Introduction 105
8.2. Framework 106
8.3. Route choice during road works 111
8.3.1. Traditional traffic assignment 111
8.3.2. Alternative traffic assignment 112
8.4. Example 115
8.4.1. Demand 115
8.4.2. Network 115
8.4.3. Case N342 116
8.5. Conclusion 117
8.6. Acknowledgments 118
8.7. Bibliography 118

Part 3. Traffic Management, Monitoring and Routing 121

Chapter 9. Behavioral Responses to Traffic Congestion – Findings from Paris, São Paulo and Mumbai 123
Gaele LESTEVEN

9.1. Introduction 123
9.1.1. Traffic congestion. 123
9.1.2. The context of the three studied megacities 124
9.2. Methodology 127
9.2.1. Presentation of the method 127
9.2.2. The sample 127
9.2.3. Implementation of the survey 129
9.3. Results 130
9.3.1. A universal list of responses to traffic congestion 130
9.3.2. Different frequencies 132
9.3.3. The threshold of household tolerance to congestion 133
9.4. Conclusions 134
9.5. Acknowledgments 136
9.6. Bibliography 136

Chapter 10. Empirical Analysis of Lane Changing Behavior at a Freeway Weaving Section 139
Florian MARCZAK, Winnie DAAMEN and Christine BUISSON

10.1. Introduction 139
10.2. Data collection site and technique 142
10.3. Methodology and definitions 143

10.4. Results . . . 145
10.5. Discussion and conclusion . . . 149
10.6. Bibliography . . . 150

Chapter 11. Applying and Testing a New Generation Traffic Management with Multi-objectives . . . 153
Martijn DE KIEVIT and Yusen CHEN

11.1. Introduction . . . 153
11.2. Definitions . . . 155
11.3. Literature review . . . 156
11.4. Methodology . . . 159
11.5. Application cases and results . . . 159
11.5.1. Simulation . . . 160
11.5.2. Results and analysis . . . 161
11.6. Concluding remarks . . . 164
11.7. Acknowledgments . . . 164
11.8. Bibliography . . . 165

Chapter 12. ON-TIME: A Framework for Integrated Railway Network Operation Management . . . 167
Thomas ALBRECHT' and Meena DASIGI

12.1. Introduction . . . 167
12.1.1. Motivation and fundamental principles . . . 167
12.1.2. Railway control loop . . . 169
12.1.3. Structure of the chapter . . . 171
12.2. Real-time perturbation management . . . 171
12.2.1. Important data structures . . . 171
12.2.2. Important functions and their interaction . . . 172
12.3. Train speed control . . . 175
12.3.1. Functional description . . . 175
12.3.2. Distribution of intelligence and possible interface definitions . . . 176
12.4. Demonstration and validation approach . . . 178
12.5. Conclusions . . . 180
12.6. Acknowledgments . . . 180
12.7. Bibliography . . . 180

Chapter 13. A Multi-Lane Capacity Model Designed for Variable Speed Limit Applications . . . 183
Aurélien DURET

13.1. Background . . . 183
13.2. MLC model . . . 186

13.2.1. Field measurements 186
13.2.2. Presentation of the model 187
13.2.3. Applications for variable speed limit strategies 190
13.3. Meso-LWR model and multi-lane capacity model 192
13.3.1. Meso-LWR model 193
13.4. Application 194
13.4.1. Presentation of the scenarios 194
13.4.2. Analytical analysis 196
13.4.3. Simulation results 197
13.5. Discussion 199
13.6. Acknowledgments 200
13.7. Bibliography 200

Chapter 14. Evaluation Parameters of Re-routing Strategy 203
Vladimir ZYRYANOV and Anastasia FEOFILOVA

14.1. Introduction 203
14.2. Simulation framework 205
14.3. Determination of the dynamic re-routing start based on traffic flow conditions 209
14.4. Conclusion 214
14.5. References 215

Part 4. Travel Information 217

Chapter 15. Pre-Trip Road Information Impact Assessment: A Literature Review 219
Sylvain BELLOCHE, Charlotte PIERREFEU and Caroline SORAND

15.1. Introduction 219
15.2. Pre-trip road information content and broadcasting media 220
15.3. Determining factors for user choice 223
15.3.1. Trip purpose 223
15.3.2. Information perceived quality and reliability 223
15.3.3. Personal factors 224
15.3.4. The traveler's memories 224
15.4. Pre-trip road information impacts 225
15.4.1. Overall impact of pre-trip road information 226
15.4.2. Impact on route choice 227
15.4.3. Impact on departure time 228
15.4.4. Impact on mode choice 230

15.4.5. Other impacts 231
15.4.6. Coupled impacts 231
15.5. Conclusions and discussion 231
15.6. Bibliography 232

Chapter 16. Transferability Study on Full-scale Implementation of Real-time Passenger Information 235

Mitja KLEMENČIČ, Vlasta RODOŠEK, Marko ČELAN and Marjan LEP

16.1. Introduction 235
16.2. RTPI testing in Maribor 236
16.3. Benefits of the RTPI system 238
16.3.1. Benefits for passengers 238
16.3.2. Benefits for public transport operators and public transport authorities 239
16.3.3. Benefits for society 239
16.4. Cost benefit analysis and RTPI system 240
16.4.1. Cost benefit analysis of RTPI system 240
16.4.2. Perceived users waiting time in Maribor 242
16.4.3. Steps towards full-scale RTPI implementation 243
16.5. Mobility toolbox as transferability tool 246
16.6. Conclusion 248
16.7. Acknowledgments 248
16.8. Bibliography 249

Chapter 17. Excess Commuting and Commuting Economy: Peak and Off-Peak Variation in Travel Efficiency Measures 251

Enda MURPHY

17.1. Introduction 251
17.2. Excess commuting, commuting economy and off-peak travel 252
17.3. Data and methods 256
17.3.1. Dublin 256
17.3.2. Data 256
17.3.3. Formulations 257
17.4. Results 259
17.4.1. Peak and off-peak travel scales 259
17.4.2. Peak and off-peak mode analysis 262
17.5. Conclusions and limitations 264
17.6. Bibliography 265

Chapter 18. Deployment of Interoperable Cross-Border Multimodal Traveler Information in Central Europe 267
Gerhard MENZEL, Martin BÖHM and Katharina ZWICK

18.1. Introduction 267
18.2. The EDITS concept 269
18.2.1. The EDITS Multimodal Traveler Information (MTI) service framework – a modular approach 269
18.2.2. Exchange of data and information between regions 271
18.2.3. Provision of multimodal traveler information services – a decentralized approach 272
18.3. Conclusion 274
18.4. Bibliography 275

Part 5. Assessment and Impacts 277

Chapter 19. The Impacts of Cooperative Traffic Systems on Safety, Environment and Travel Times: A Literature Survey 279
Isabela MOCANU, Philippe NITSCHE and Kerry MALONE

19.1. Introduction 279
19.1.1. Description of the Cooperative Benefits for Road Authorities (COBRA) project 280
19.1.2. Outline of the chapter 280
19.2. Description of systems and bundles 281
19.3. Reviewed literature 283
19.4. Methodology 284
19.4.1. Indicators and penetration scenarios 284
19.4.2. Assessment methodology for systems and bundles 286
19.5. Results 287
19.6. Conclusions and recommendations 289
19.7. Acknowledgments 290
19.8. Bibliography 291

Chapter 20. The Impact of Navigation Support and Traffic Information on Distance-keeping Behavior 293
Aikaterini TOULIOU, Evangelia GAITANIDOU and Evangelos BEKIARIS

20.1. Introduction 293
20.2. Methods 296
20.2.1. Participants and recruitment 296
20.2.2. Design and procedure 297
20.2.3. Instrumented vehicle 298

20.2.4. Statistical analysis 298
20.3. Results. 299
20.3.1. Stratification for road types. 301
20.3.2. Percentage of time spent with certain time headway values 302
20.4. Discussion. 302
20.5. Bibliography 304

Chapter 21. Impact Evaluation of Traffic Performance and Road Safety: A Case Study on an Urban Motorway in France 307

Simon COHEN and Zoi CHRISTOFOROU

21.1. Introduction 307
21.2. The site and the its application 308
21.3. Evaluation of the impact on traffic 310
21.3.1. Speed and capacity 310
21.3.2. Level of service 311
21.3.3. Congestion 312
21.4. Road safety implications. 313
21.5. Discussion. 315
21.6. Conclusions 316
21.7. Bibliography 317

Chapter 22. Assessment of the Main New Travel-times Calculation Technologies on Lyon East Ring Road 319

Eric PURSON, Alexis BACELAR, Eric KLEIN, Bruno LEVILLY and Fabrice RECLUS

22.1. Introduction 319
22.1.1. Background 319
22.1.2. Goals of the experiment. 320
22.2. The trial site. 321
22.3. Assessed technologies 323
22.4. Implemented methodology 324
22.4.1. Reference system 324
22.4.2. Assessment methods 325
22.5. Innovative administrative procedure 328
22.6. Conclusion 329
22.7. Acknowledgments 329
22.8. Bibliography 329

Chapter 23. Rail Externalities: Assessing the Social Cost of Rail Congestion 331
María PÉREZ HERRERO, Julien BRUNEL and Gregoire MARLOT

23.1. Introduction 331
23.2. Related literature 332
23.3. The model and the econometric strategy 335
23.4. The data set 336
23.5. Results 338
23.6. Conclusions 341
23.7. Acknowledgments 342
23.8. Bibliography 342

List of Authors 345
