<b>Preface</b> . . . . .	xv
<b>Chapter 1. A Logical Presentation of Thermodynamics</b> . . . . .	1
1.1. Concepts in thermodynamics . . . . .	1
1.1.1. States of aggregation of material . . . . .	1
1.1.2. Phases and components . . . . .	1
1.1.3. Thermodynamic system: variables and functions of state . . . . .	2
1.1.4. Variables and intensive or extensive functions (parameters) . . . . .	2
1.1.5. Isolated, open and closed systems . . . . .	2
1.1.6. Energy and evolution of a system. The concept of work . . . . .	3
1.1.7. Classification of systems . . . . .	3
1.1.8. The concept of a “reservoir” . . . . .	3
1.2. Tenets of thermodynamics . . . . .	4
1.2.1. First tenet: concept of equilibrium . . . . .	4
1.2.2. Second tenet: transitivity of equilibrium . . . . .	4
1.3. First law of thermodynamics and internal energy. . . . .	4
1.3.1. Concepts of hot and cold: empirical temperature . . . . .	4
1.3.2. Consequence: evaluation of heat: specific heat capacity . . . . .	5
1.3.3. Equivalences of energies . . . . .	6

---

1.3.4. External energy of a system . . . . .	6
1.3.5. General expression of work . . . . .	6
1.3.6. Introduction to enthalpy . . . . .	7
1.3.7. Heat is not a function of state . . . . .	9
1.4. Second law and entropy . . . . .	10
1.4.1. Second law of thermodynamics . . . . .	10
1.4.2. Conversion of heat into work. Prohibited states . . . . .	10
1.4.3. Pfaff formula and holonomicity . . . . .	11
1.4.4. Carathéodory's theorem and existence of entropy . . . . .	11
1.4.5. Reversibility and entropy . . . . .	12
1.4.6. Entropy: an extensive variable . . . . .	13
1.4.7. Sign of the absolute temperature . . . . .	15
1.4.8. Thermodynamic temperature scale . . . . .	16
1.5. Gibbs energy and Euler's theorem . . . . .	17
1.5.1. Chemical potential . . . . .	17
1.5.2. Properties of the chemical potential . . . . .	19
1.5.3. Euler's theorem . . . . .	20
1.6. Values of state. Thermodynamic potentials . . . . .	22
1.6.1. Definitive form of the values of state . . . . .	22
1.6.2. Irreversibility . . . . .	23
1.6.3. Entropy increases when an internal stress is relieved . . . . .	24
1.6.4. Generalization of the notion of entropy . . . . .	26
1.6.5. Monotonic variation in entropy . . . . .	27
1.6.6. Diffusion (Fick's law) . . . . .	28
1.6.7. Return of the concept of equilibrium . . . . .	29
1.6.8. Thermodynamic potentials . . . . .	31
1.7. Use of the concept of entropy – thermal machines and entropy analysis . . . . .	34
1.7.1. Ideal performances of thermal machines . . . . .	34
1.7.2. Entropy analysis . . . . .	35
1.8. Gibbs–Duhem and Gibbs–Helmholtz equations . . . . .	38
1.8.1. Gibbs–Duhem equation . . . . .	38
1.8.2. Generalized Gibbs–Duhem equation . . . . .	38
1.8.3. Thermodynamic equations of state . . . . .	40
1.8.4. Gibbs–Helmholtz equation . . . . .	41
1.9. Entropy and statistical physics . . . . .	42
1.9.1. Ensembles model . . . . .	42
1.9.2. Microcanonical ensemble . . . . .	43

---

1.9.3. The canonical ensemble . . . . .	44
1.9.4. Grand canonical ensemble . . . . .	47
1.9.5. Timeline . . . . .	47
1.9.6. Onsager's reciprocity theorem . . . . .	49
<b>Chapter 2. Equations of State and Fugacities.</b> . . . . .	<b>51</b>
2.1. Perfect gases . . . . .	51
2.1.1. Definition of perfect gases . . . . .	51
2.1.2. Values of state of pure perfect gases. . . . .	51
2.1.3. Concept of a perfect gas associated with a chemical species . . . . .	55
2.2. Mixture of perfect gases . . . . .	56
2.2.1. Preliminaries. . . . .	56
2.2.2. Partial volume and partial pressure . . . . .	56
2.2.3. Partial entropy. . . . .	56
2.2.4. Internal energy . . . . .	57
2.2.5. Enthalpy . . . . .	57
2.2.6. Specific heat capacities . . . . .	57
2.2.7. Gibbs energy and chemical potential . . . . .	57
2.3. Real chemical species in the pure state. . . . .	59
2.3.1. Two categories of equations of state. . . . .	59
2.3.2. Equations based on the coefficients of the virial. . . . .	60
2.3.3. Cubic-type equations. . . . .	61
2.3.4. Determination of the parameters of a cubic equation . . . . .	63
2.3.5. Principle for calculating the properties of fluids . . . . .	64
2.3.6. Residual internal energy and enthalpy. . . . .	64
2.3.7. Residual Gibbs energy and Helmholtz energy. . . . .	67
2.3.8. Residual entropy . . . . .	68
2.3.9. Fugacity coefficient . . . . .	68
2.3.10. Residual specific heat capacity at constant volume . . . . .	68
2.3.11. Residual specific heat capacity at constant pressure . . . . .	69
2.3.12. Expression of $C_p^R - C_v^R$ . . . . .	69
2.3.13. Practical values . . . . .	70
2.3.14. Residual volume. . . . .	70

2.3.15. Differentials of entropy . . . . .	71
2.3.16. Isentropic compressibility modulus . . . . .	71
2.3.17. Practical evaluation of H and S as a function of T . . . . .	71
2.3.18. Joule–Thomson expansion (free expansion) . . . . .	73
2.3.19. Use of the equation of state . . . . .	74
2.3.20. Isothermal compressibility and elasticity moduli . . . . .	76
2.3.21. Coefficients of isobaric and isochoric thermal expansion . . . . .	76
2.3.22. Antoine’s equation for the vapor pressure of a pure substance . . . . .	77
2.3.23. Specific heat capacity at constant pressure (practical expression) . . . . .	78
2.3.24. Clapeyron equation . . . . .	78
2.3.25. Application: crossing the critical point . . . . .	80
2.3.26. Vapor pressure based on a cubic . . . . .	81
2.3.27. Vapor pressure and equation of state (numerical calculation) . . . . .	83
2.3.28. Gibbs energy of liquids. . . . .	84
2.4. Properties of real mixtures . . . . .	86
2.4.1. Partial values (practical calculation) . . . . .	86
2.4.2. Fundamental nature of partial values . . . . .	86
2.4.3. Practical calculation of the partial values. . . . .	88
2.4.4. Verification of the Gibbs–Duhem equation . . . . .	89
2.4.5. Partial molar volumes based on an equation of state $P = P(V, T)$ . . . . .	90
2.4.6. Two-derivatives theorem . . . . .	91
2.4.7. Rules of derivation of the integrals . . . . .	92
2.4.8. Correspondences between the activity coefficient and fugacity coefficients. . . . .	93
2.4.9. Properties of the fugacity coefficient in a mixture. . . . .	94
2.4.10. Partial residual Gibbs energy . . . . .	95
2.4.11. Other residual partial values. . . . .	97
2.4.12. Cubic equation of state: calculation of $\phi$ . . . . .	98
2.4.13. Peng–Robinson equation and Helmholtz energy. . . . .	99
2.4.14. Wong and Sandler’s first rule of mixing . . . . .	99
2.4.15. Wong and Sandler’s second rule of mixing. . . . .	100
2.4.16. An equation of state that is probably better suited to liquids . . . . .	102
2.4.17. Calculation of the critical points . . . . .	103
2.5. Characterization of crude-oil-based mixtures. . . . .	103
2.5.1. ASTM boiling point curve . . . . .	103

---

2.5.2. TBP curve . . . . .	103
2.5.3. Properties of oil fractions . . . . .	104
2.6. Conclusion . . . . .	106
2.6.1. Advantage to equations of state . . . . .	106
2.6.2. A very useful simplification. . . . .	106
<b>Chapter 3. Solution Activity Coefficients . . . . .</b>	<b>107</b>
3.1. Mixtures in the liquid state (non-electrolytes) . . . . .	107
3.1.1. Raoult's law for ideal solutions. . . . .	107
3.1.2. How to describe real solutions . . . . .	107
3.1.3. Validity of solutions theory . . . . .	108
3.1.4. Excess Gibbs energy for the liquid phase. . . . .	108
3.1.5. Practical expressions of $G_E$ and $\gamma_i$ . . . . .	109
3.1.6. Liquid-liquid equilibria . . . . .	110
3.1.7. The UNIFAC method . . . . .	111
3.1.8. Concrete meaning of the activity coefficient. . . . .	112
3.1.9. Are the activity coefficients and fugacity coefficients compatible? . . . . .	112
3.2. Equilibrium between crystal and solution . . . . .	113
3.2.1. Solubility curve . . . . .	113
3.2.2. Correspondence between melting- and dissolution heats . . . . .	115
3.2.3. Use of the solubility product . . . . .	116
3.2.4. Boiling delay and crystallization delay . . . . .	117
3.2.5. Expression of the activity coefficients (solid-liquid equilibria) . . . . .	119
3.2.6. Chemical potential of an electrolyte or of an ion . . . . .	120
3.2.7. Equivalence, molalities and molar fractions . . . . .	121
3.2.8. Average activity. . . . .	122
3.3. Electric field of Debye and Hückel . . . . .	122
3.3.1. Correspondence between the international system and the electrostatic CGS system. . . . .	122
3.3.2. Debye length. . . . .	123
3.3.3. Ionic radius and associated coefficients. . . . .	125
3.3.4. Helmholtz energy of the solution . . . . .	126
3.3.5. Partial derivatives of $F_e$ . . . . .	126
3.4. Two approximate calculation methods (electrolytes) . . . . .	128
3.4.1. Some definitions to begin with . . . . .	128
3.4.2. Ionic strength and valences . . . . .	128

3.4.3. Activity of water (single electrolyte) . . . . .	129
3.4.4. Meissner's equation . . . . .	130
3.4.5. Meissner curves . . . . .	131
3.4.6. Reduced activity coefficient in a mixture . . . . .	132
3.4.7. Activity of the solvent in a mixed solution . . . . .	133
3.4.8. Water: an ionizing and solvating solvent . . . . .	134
3.4.9. Influence of temperature . . . . .	135
3.4.10. Criticism of Debye and Hückel's activity coefficient . . . . .	135
3.4.11. Activity coefficient of the solvent . . . . .	137
3.4.12. Activity coefficients of solutes according to Helgeson <i>et al.</i> . . . . .	139
3.4.13. Influence of temperature . . . . .	144
3.5. Osmotic coefficient (electrolytes) . . . . .	145
3.5.1. Osmotic pressure . . . . .	145
3.5.2. Osmotic coefficient . . . . .	146
3.5.3. Calculation according to Helgeson <i>et al.</i> . . . . .	148
3.5.4. Meissner's calculation . . . . .	150
3.6. Cruz and Renon's theoretical and practical review . . . . .	151
3.6.1. Debye and Hückel's term . . . . .	151
3.6.2. Born's equation . . . . .	152
3.6.3. NRTL term . . . . .	153
<b>Chapter 4. Laws Governing the Transfer of Material and Heat Between Two Immiscible Fluids' Electrolytes and their Diffusion . . . . .</b>	<b>157</b>
4.1. Fick's law . . . . .	157
4.1.1. Expression of Fick's law . . . . .	157
4.1.2. A single species transferred between two fluids not transferred (elementary two-film theory) . . . . .	158
4.2. Maxwell–Stefan equations . . . . .	160
4.2.1. Expression of the Maxwell–Stefan equations . . . . .	160
4.2.2. Symmetry of the diffusivities . . . . .	162
4.2.3. Complementary equation . . . . .	162
4.2.4. Canonical M.–S equation . . . . .	164
4.2.5. Two immiscible fluid phases . . . . .	165
4.2.6. Important specific cases . . . . .	166
4.3. Matrix resolution of the M.–S equations . . . . .	167
4.3.1. Matrix expression of the gradient of chemical potential . . . . .	167

---

4.3.2. Matrix expression of the M.–S equations . . . . .	168
4.3.3. Global transfer matrix . . . . .	170
4.3.4. Calculation procedure . . . . .	171
4.3.5. Krishna and Standart's method . . . . .	171
4.3.6. Variation of the size of a drop . . . . .	172
4.3.7. Which equation is best suited? . . . . .	172
4.3.8. Transfer coefficients. Some references . . . . .	173
4.3.9. Kinetics of solvent-based extraction . . . . .	173
4.4. Simultaneous transfers of material and heat . . . . .	173
4.4.1. Interfacial temperature . . . . .	173
4.4.2. Evolution of temperatures of the fluids . . . . .	175
4.5. Diffusion of electrolytes . . . . .	176
4.5.1. Chemical potential of electrolytes . . . . .	176
4.5.2. One type of anion and one type of cation . . . . .	177
4.5.3. At least three types of ions . . . . .	179
4.5.4. Neutrality of electrolytic solutions during diffusion . . . . .	181
4.6. Determination of diffusivities . . . . .	181
4.6.1. Measuring the diffusivities . . . . .	181
4.6.2. Predictive calculation of the diffusivities in liquids (non-electrolytes): . . . . .	183
4.6.3. Stokes–Einstein equation (large molecules) . . . . .	185
4.6.4. Reciprocal diffusivity in gases . . . . .	186
4.6.5. Equivalent conductivity and molar conductivity of ions . . . . .	187
4.6.6. Conductance, mobility and diffusivity . . . . .	189
4.6.7. Transport number, transference . . . . .	191
4.7. Concepts concerning batteries and electrolytic cells . . . . .	191
4.7.1. Galvani potential . . . . .	191
4.7.2. Electrochemical potential . . . . .	192
4.7.3. The battery using a hydrogen electrode . . . . .	192
4.7.4. Nernst's equation . . . . .	194
<b>Chapter 5. Calculation of the Equilibrium Between Two Fluids . . . . .</b>	<b>197</b>
5.1. General . . . . .	197
5.1.1. General equilibrium between two phases . . . . .	197
5.1.2. Phase rule . . . . .	199
5.1.3. Ratio of molar fractions at equilibrium . . . . .	199
5.2. Representation of liquid–vapor equilibria . . . . .	200
5.2.1. Distinction between liquid phase and gaseous phase . . . . .	200
5.2.2. Behavior of two phases of the same composition . . . . .	201

5.2.3. Finding the nature of certain points of equilibrium . . . . .	205
5.2.4. Liquid–vapor equilibrium at constant composition . . . . .	206
5.2.5. Ideal mixtures . . . . .	207
5.3. Calculation of the equilibria between two fluids . . . . .	208
5.3.1. Partial material balances and overall balance . . . . .	208
5.3.2. Equilibrium equations . . . . .	208
5.3.3. Normalization equation . . . . .	209
5.3.4. The system resolving the $(2n + 1)$ equations . . . . .	210
5.3.5. Available data and unknowns to be calculated . . . . .	210
5.3.6. We take P and T and look for V . . . . .	211
5.3.7. We take V and P and look for T . . . . .	212
5.3.8. Isenthalpic depressurization from P1 to P2 . . . . .	213
5.3.9. The “N” equation in the presence of non-condensable gaseous inerts . . . . .	214
5.3.10. Two condensable vapors and an inert . . . . .	215
5.3.11. Mixture of water and hydrocarbons . . . . .	216
5.4. A limiting case: Henry’s law . . . . .	217
5.4.1. Henry’s law . . . . .	217
5.4.2. Influence of the pressure on the solubility of a gas . . . . .	217
5.5. Liquid–liquid equilibrium: general points and representations . . . . .	219
5.5.1. Terminology . . . . .	219
5.5.2. Barycentric coordinates . . . . .	220
5.5.3. Liquid–liquid equilibrium in the triangular representation . . . . .	222
5.5.4. A simplification: the sharing curve . . . . .	223
5.5.5. An extreme simplification: the sharing coefficient . . . . .	223
5.5.6. Particular case of petroleum-based oils . . . . .	224
5.6. Calculation of liquid–liquid equilibria: binary mixtures . . . . .	224
5.6.1. Description of the binary equilibrium (2 phases and 2 components) . . . . .	224
5.6.2. The common tangent rule (binary mixtures) . . . . .	226
5.6.3. Calculation of the equilibrium of a binary mixture . . . . .	227
5.7. Ternary mixtures . . . . .	228
5.7.1. Multiple binary demixings . . . . .	229
5.8. Equilibria in the supercritical domain . . . . .	230
5.8.1. Supercritical two-phase equilibria . . . . .	230
5.8.2. Transfer of material in the critical domain . . . . .	230
5.8.3. Supercritical extraction procedures . . . . .	231

---

<b>Appendices</b> .....	233
<b>Appendix 1. Indefinite Integrals Useful for the Calculation of the Functions of State on the Basis of a Cubic Equation</b> .....	235
<b>Appendix 2. Solving Third- and Fourth-degree Equations: Searching for Dimensionless Groups</b> .....	237
<b>Appendix 3. A Few Important Identities</b> .....	241
<b>Appendix 4. A Few Expressions for Partial Vapor Pressures</b> .....	245
<b>Appendix 5. Numerical Calculation of the Solution to <math>F(X) = 0</math></b> .....	249
<b>Appendix 6. Jacobian Method</b> .....	251
<b>Appendix 7. Characteristics of Various Gases</b> .....	253
<b>Appendix 8. The CGS Electromagnetic System</b> .....	255
<b>Appendix 9. Resistance, Conductance, Diffusance</b> .....	259
<b>Bibliography</b> .....	261
<b>Index</b> .....	271
