Introduction	ix
PART 1. MOTIVATION: EXAMPLES AND APPLICATIONS	1
Chapter 1. Curvilinear Continuous Media	3
1.1. One-dimensional curvilinear media	4
1.1.1. Ideally flexible string	5
1.1.1.1. The essential difficulty	7
1.1.1.2. Unilateral contact	11
1.1.2. The “elastica” problem: buckling of an inextensible beam	19
1.2. Supple membranes	22
1.2.1. Curvilinear coordinates and charts	23
1.2.2. Metric tensor	25
1.2.3. Internal efforts and constitutive law	28
1.2.4. Exterior efforts	29
1.2.5. Infinitesimal deformations	29
1.2.6. Principle of minimum energy	30
Chapter 2. Unilateral System Dynamics	33
2.1. Dynamics of ideally flexible strings	34
2.1.1. Propagation of discontinuities	34
2.1.2. Evolution	36
2.1.3. Vibrations	38
2.1.3.1. Harmonic response	38

2.1.3.2. Small oscillations	38
2.2. Contact dynamics	40
2.2.1. Evolution of a material point	40
2.2.2. Evolution of deformable and non-deformable solids	45
2.2.3. Granular modeling of the movement of a crowd	47
Chapter 3. A Simplified Model of Fusion/Solidification	53
3.1. A simplified model of phase transition	53
Chapter 4. Minimization of a Non-Convex Function	61
4.1. Probabilities, convexity and global optimization	61
Chapter 5. Simple Models of Plasticity	69
5.1. Ideal elastoplasticity	72
PART 2. THEORETICAL ELEMENTS	77
Chapter 6. Elements of Set Theory	79
6.1. Elementary notions and operations on sets	80
6.2. The axiom of choice	83
6.3. Zorn's lemma	89
Chapter 7. Real Hilbert Spaces	97
7.1. Scalar product and norm	99
7.2. Bases and dimensions	107
7.3. Open sets and closed sets	114
7.4. Sequences	123
7.4.1. Dense sequences and dense sets	128
7.5. Linear functionals	137
7.5.1. Sequences and continuity	144
7.6. Complete space	146
7.6.1. The Cauchy sequence	146
7.6.2. Completion of a space	150
7.6.3. Baire's theorem: a property of complete spaces	158
7.7. Orthogonal projection onto a vector subspace	160
7.8. Riesz's representation theory	167

7.9. Weak topology	173
7.10. Separable spaces: Hilbert bases and series	184
Chapter 8. Convex Sets	201
8.1. Hyperplanes	201
8.2. Convex sets	208
8.3. Convex hulls	212
8.4. Orthogonal projection on a convex set	217
8.5. Separation theorems	228
8.6. Convex cone	241
Chapter 9. Functionals on a Hilbert Space	253
9.1. Basic notions	254
9.2. Convex functionals	261
9.3. Semi-continuous functionals	271
9.4. Affine functionals	298
9.5. Convexification and LSC regularization	303
9.6. Conjugate functionals	320
9.7. Subdifferentiability	331
Chapter 10. Optimization	361
10.1. The optimization problem	361
10.2. Basic notions	362
10.2.1. Minimizing sequences	362
10.2.2. Indicator function	363
10.2.3. Coerciveness	370
10.3. Fundamental results	374
10.3.1. Approximation	386
10.3.1.1. Exterior penalty approximation	388
10.3.1.2. Interior penalty approximation	395
10.3.1.3. Approximation by regularization	400
10.3.1.4. Duality approximation	403
Chapter 11. Variational Problems	421
11.1. Fundamental notions	421
11.1.1. Proximal elements	421

11.1.2. Operators and monotony	424
11.1.2.1. Monotony	426
11.1.2.2. Semi-continuous operators and hemi-continuous operators	428
11.1.2.3. Maximal monotone operators	435
11.1.2.4. Brower's fixed point theorem	446
11.2. Zeros of operators	455
11.3. Variational inequations	463
11.4. Evolution equations	469
Bibliography	487
Index	495
