CHAPTER 1. INTRODUCTION TO THE AGENT APPROACH	1
Fabrice BOUQUET, Sébastien CHIPEAUX, Christophe LANG, Nicolas MARILLEAU, Jean-Marc NICOD and Patrick TAILLANDIER	
1.1. Introduction	1
1.2. Two different MAS shown through examples	3
1.2.1. MAS in social sciences	3
1.2.2. MAS in soil sciences	4
1.2.3. Summary	5
1.3. Agents and the major trends within spatial modeling	6
1.3.1. Major trends in spatial modeling	6
1.3.2. Properties of modeling approaches	7
1.3.3. How to model a system	10
1.4. The agent paradigm	11
1.4.1. Basic concepts	11
1.4.2. Interactions	14
1.4.3. Types of agents	15
1.4.4. MAS organization paradigms	16
1.4.5. Agent platforms	19
1.5. Observing a phenomenon through agents	21
1.5.1. Two agent approaches to a real phenomenon	21

1.5.2. Agent modeling through an example: the MIRO project	23
1.5.3. Critical analysis	25
1.6. Summary	28

CHAPTER 2. DESCRIPTION FORMALISMS

IN AGENT MODELS	29
----------------------------------	-----------

Fabrice BOUQUET, David SHEEREN, Nicolas BECU, Benoît GAUDOU, Christophe LANG, Nicolas MARILLEAU and Claude MONTEIL

2.1. Introduction	29
2.2. Recurrent example	30
2.3. Formalization of agent models	32
2.3.1. UML	32
2.3.2. AML	41
2.3.3. UML versus AML	51
2.3.4. Other variations of UML	53
2.3.5. Formalizing changes in behavior in UML	53
2.4. Description and documentation of agent models	55
2.4.1. Why describe and document?	56
2.4.2. How can models be described and documented?	61
2.4.3. ODD documentation of the recurrent example	66
2.5. Discussion on documentation	71

CHAPTER 3. INTRODUCTION TO NETLOGO	75
-----------------------------------------------------	-----------

Frédéric AMBLARD, Eric DAUDÉ, Benoît GAUDOU, Arnaud GRIGNARD, Guillaume HUTZLER, Christophe LANG, Nicolas MARILLEAU, Jean-Marc NICOD, David SHEEREN and Patrick TAILLANDIER

3.1. Introduction	75
3.1.1. A little history	75
3.1.2. Purpose of the chapter	77
3.2. Metamodel of NetLogo	78
3.2.1. Patches	78
3.2.2. Turtles	81
3.2.3. Links	82

3.2.4. The observer	83
3.3. The NetLogo software interface	83
3.4. Step-by-step creation of a simple model	85
3.4.1. Creating the structure of the world and defining its initial state	86
3.4.2. Introducing environmental behaviors	97
3.5. Agent-agent and agent-environment interactions	108
3.5.1. Agent-agent interactions	108
3.5.2. Structuring interactions as part of a social network composed of links	112
3.5.3. Adjacency	113
3.6. Introduction to NetLogo’s additional functionalities	114
3.6.1. The Behavior space tool	114
3.6.2. Multiplayer (HubNet)	114
3.6.3. Dynamic systems	115
3.6.4. Introduction to models in 3D environments	116
3.6.5. Geographical information systems	118
3.6.6. Algorithms in graphs	119
3.6.7. NetLogo dictionary and abbreviated commands	122
3.7. Conclusion	123
CHAPTER 4. AGENT-BASED MODEL EXPLORATION	125
Arnaud BANOS, Philippe CAILLOU, Benoît GAUDOU and Nicolas MARILLEAU	
4.1. Introduction	125
4.1.1. Introductory example	125
4.1.2. Objectives	127
4.2. Exploring a simulation	128
4.2.1. Objectives	128
4.2.2. Using a histogram to display distributions	129
4.2.3. Using an xy-plot	131
4.2.4. Mapping with the help of patches	136
4.2.5. Display of the mosquito/human interaction network	139
4.2.6. Use of graphs across several simulations	140

4.3. Exploring several simulations	144
4.3.1. Introduction	144
4.3.2. Exploring the parameter space: the BehaviorSpace, step by step	145
4.3.3. Analyzing data within NetLogo (advanced use of BehaviorSpace)	151
4.3.4. Data analysis beyond NetLogo: the example of R	173
4.4. Conclusion	180
CHAPTER 5. DYNAMICAL SYSTEMS WITH NETLOGO . . .	183
Nathalie CORSON and Damien OLIVIER	
5.1. Introduction	183
5.2. Aggregate model versus agent-based model	184
5.3. Aggregate representation of the spread of panic	186
5.3.1. Representing dynamic systems with NetLogo	189
5.3.2. Constructing a dynamical system model by a system of ODEs	197
5.3.3. Study of the dynamic system	201
5.4. Agent-based panic propagation model	216
5.5. Dynamic system version of our running example model	218
CHAPTER 6. HOW TO INVOLVE STAKEHOLDERS IN THE MODELING PROCESS	223
Nicolas BECU, Frédéric AMBLARD, Nicolas BRAX, Benoît GAUDOU and Nicolas MARILLEAU	
6.1. Introduction	223
6.2. Diversity of multiagent approaches in modeling	225
6.2.1. Participatory simulation	225
6.2.2. Collaboration within modeling and simulation (M&S)	227
6.3. Simulating stakeholder games and learning about others: Netlogo's HubNet system	230
6.3.1. The HubNet technology	230
6.3.2. Participatory roleplay simulation	232

6.3.3. SimPAGE – learning from participatory simulation	237
6.4. Exchanging and questioning knowledge: the PAMS collaborative portal	246
6.4.1. Sharing the PAMS simulation	247
6.4.2. Usage example: the MIRO project	248
6.5. The issues to which multiagent models may provide answers	250
6.5.1. Revealing behaviors and joint model building	250
6.5.2. Tools favoring interdisciplinarity	251
6.5.3. Mediation and training	252
