Preface	xiii
List of the Main Symbols	xv
Chapter 1. Simple Fluids	1
1.1. Introduction.	1
1.2. Key elements in deformation theory – Lagrangian coordinates and Eulerian coordinates.	2
1.2.1. Strain rates	2
1.2.2. Lagrangian coordinates and Eulerian coordinates	7
1.2.3. Trajectories, stream lines, emission lines	8
1.3. Key elements in thermodynamics. Reversibility, irreversible processes: viscosity, heat conduction	9
1.3.1. Thermodynamic variables, definition of a system, exchanges, differential manifold of equilibrium states, transformation	9
1.3.2. Laws of thermodynamics	11
1.3.3. Properties of simple fluids at equilibrium.	14
1.4. Balance equations in fluid mechanics. Application to incompressible and compressible perfect fluids and viscous fluids.	18
1.4.1. Mass balance	18
1.4.2. Concept of a particle in a continuous medium: local state	19
1.4.3. Balance for the property F.	20
1.4.4. Application to volume, to momentum and to energy	22
1.4.5. Entropy balance and the expression of the rate of production of entropy	23
1.4.6. Balance laws for discontinuity	25

1.4.7. Application to incompressible perfect fluids	26
1.4.8. Application to dissipative fluids	31
1.5. Examples of problems with 2D and 3D incompressible perfect fluids	32
1.5.1. Planar 2D irrotational flows: description in the complex plane of steady flows	32
1.5.2. 3D irrotational flows of incompressible perfect fluids: source, sink, doublet	36
1.5.3. Rotational flows of incompressible perfect fluids	41
1.6. Examples of problems with a compressible perfect fluid: shockwave, flow in a nozzle, and characteristics theory	44
1.6.1. General theorems	44
1.6.2. Propagation of sound in an ideal gas	44
1.6.3. Discontinuities	46
1.6.4. Unsteady characteristics	47
1.6.5. Steady normal shockwave: Hugoniot and Prandtl relations	48
1.6.6. Flow in a de Laval nozzle	49
1.6.7. Simple wave	53
1.7. Examples of problems with viscous fluids	56
1.7.1. General equations	56
1.7.2. Incompressible viscous fluid	57
1.7.3. Flow of a compressible dissipative fluid: structure of a shockwave	61
1.8. Exercises	64
1.8.1. Exercises in kinematics (section 1.2)	64
1.8.2. Exercises in thermodynamics (section 1.3)	67
1.8.3. Exercises for the balance equations in fluid mechanics (section 1.4)	68
1.8.4. Examples of problems with 2D and 3D incompressible perfect fluids (section 1.5)	70
1.8.5. Examples of problems with a compressible perfect fluid (section 1.6)	74
1.8.6. Examples of problems with viscous fluids (section 1.7)	77
1.9. Solutions to the exercises	79
1.9.1. Solutions to the exercises in kinematics	79
1.9.2. Solutions to the Exercises in thermodynamics	83
1.9.3. Solutions to the exercises for the balance of equations in fluid mechanics	88
1.9.4. Solutions to the examples of problems with 2D and 3D incompressible perfect fluids	89

1.9.5. Solutions to the examples of problems with a compressible perfect fluid	93
1.9.6. Solutions to the examples of problems with viscous fluids	95
Chapter 2. Reactive Mixtures	101
2.1. Introduction.	101
2.2. Equations of state	103
2.2.1. Definition of the variables of state of a mixture	103
2.2.2. Thermodynamic properties of mixtures.	108
2.2.3. Reactive mixture	118
2.2.4. Other issues relating to the thermodynamics of mixtures	123
2.3. Balance equations of flows of reactive mixtures	124
2.3.1. Balance of mass of the species j and overall balance of mass	124
2.3.2. General balance equation of a property F	127
2.3.3. Momentum balance.	129
2.3.4. Energy balance	129
2.3.5. Balance relations in a discrete system.	132
2.3.6. Entropy balance in a continuum	137
2.3.7. Balance equations at discontinuities in continuous media	140
2.4. Phenomena of transfer and chemical kinetics.	142
2.4.1. Introduction	142
2.4.2. Presentation of the transfer coefficients by linear TIP	143
2.4.3. Other presentations of the transfer coefficients	147
2.4.4. Elements of chemical kinetics	152
2.5. Couplings	155
2.5.1. Heat transfer and diffusion	155
2.5.2. Shvab-Zeldovich approximation	158
Chapter 3. Interfaces and Lines	163
3.1. Introduction.	163
3.1.1. Interfaces.	163
3.1.2. Lines	165
3.2. Interfacial phenomena	166
3.2.1. General aspects	166
3.2.2. General form of an interfacial balance law.	168
3.2.3. Constitutive laws for interfaces whose variables directly satisfy the classical equations in thermostatics and in 2D-TIP	173
3.2.4. Constitutive laws for interfaces deduced from classical thermostatics and 3D-TIP. Stretched flame example	177
3.2.5. Interfaces manifesting resistance to folding	179

3.2.6. Numerical modeling	179
3.2.7. Interfaces and the second gradient theory.	182
3.2.8. Boundary conditions of the interfaces.	185
3.2.9. Conclusion.	185
3.3. Solid and fluid curvilinear media: pipes, fluid lines and filaments	186
3.3.1. General aspects	186
3.3.2. Establishing the balance equations in a curvilinear medium.	188
3.3.3. Simplified theories	209
3.3.4. Triple line and second gradient theory	216
3.3.5. Conclusion.	220
3.4. Exercises	222
3.4.1. Exercises regarding solid curvilinear media	222
3.4.2. Exercises regarding fluid curvilinear media	222
3.5. Solutions to the exercises.	223
3.5.1. Solutions to exercises regarding solid curvilinear media.	223
3.5.2. Solutions to the exercises regarding fluid curvilinear media	225
APPENDICES	229
Appendix 1. Tensors, Curvilinear Coordinates, Geometry and Kinematics of Interfaces and Lines	231
A1.1. Tensor notations	231
A1.1.1. Tensors and operations on tensors	231
A1.2. Orthogonal curvilinear coordinates.	234
A1.2.1. General aspects	234
A1.2.2. Curl of a vector field.	236
A1.2.3. Divergence of a vector field	237
A1.2.4. Gradient of a scalar.	238
A1.2.5. Laplacian of a scalar	238
A1.2.6. Differentiation in a curvilinear basis	238
A1.2.7. Divergence of a second order tensor \mathbf{P}	239
A1.2.8. Gradient of a vector	239
A1.2.9. Cylindrical coordinates and spherical coordinates	240
A1.3. Interfacial layers.	242
A1.3.1. Prevailing directions of an interfacial medium	242
A1.3.2. Operators of projection for interfaces	244
A1.3.3. Surface gradients of a scalar field	245
A1.3.4. Curvature vector of a curve (C_i)	245
A1.3.5. Normal and tangential divergences of a vector field	246
A1.3.6. Extension of surface per unit length.	246

A1.3.7. Average normal curvature of a surface	247
A1.3.8. Breakdown of the divergence of a vector field	248
A1.3.9. Breakdown of the Laplacian of a scalar field	249
A1.3.10. Breakdown of the divergence of a second order tensor	249
A1.3.11. Projection operators with the intrinsic definition of a surface	252
A1.3.12. Comparison between the two descriptions	253
A1.4. Curvilinear zones	254
A1.4.1. Presentation	254
A1.4.2. Geometry of the orthogonal curvilinear coordinates	256
A1.4.3. Projection operators and their consequences	257
A1.5. Kinematics in orthogonal curvilinear coordinates	260
A1.5.1. Kinematics of interfacial layers	260
A1.5.2. Kinematics of curvilinear zones	266
A1.5.3. Description of the center line	269
Appendix 2. Additional Aspects of Thermostatistics	277
A2.1. Laws of state for real fluids with a single constituent	277
A2.1.1. Diagram of state for a pure fluid	277
A2.1.2. Approximate method to determine the thermodynamic functions	278
A2.1.3. Van der Waals fluid	279
A2.1.4. Other laws for dense gases and liquids	279
A2.2. Mixtures of real fluids	280
A2.2.1. Mixture laws for a real mixture	280
A2.2.2. Expression of the free energy of a real mixture	281
Appendix 3. Tables for Calculating Flows of Ideal Gas $\gamma = 1.4$	283
A3.1. Calculating the parameters in continuous steady flow (section 1.6.6.2)	286
A3.2. Formulae for steady normal shockwaves	288
Appendix 4. Extended Irreversible Thermodynamics	289
A4.1. Heat balance equations in a non-deformable medium in EIT	290
A4.2. Application to a 1D case of heat transfer	293
A4.3. Application to heat transfer with the evaporation of a droplet	296
A4.3.1. Reminders about evaporating droplets	296
A4.3.2. Evaporating droplet with EIT	300
A4.4. Application to thermal shock	302
A4.4.1. Presentation of the problem and solution using CIT	302

A4.4.2. Thermal shock and EIT	303
A4.4.3. Application of the second order approximation in \bar{t} to two examples of thermal shock	305
A4.5. Outline of EIT	307
A4.6. Applications and perspectives of EIT	310
Appendix 5. Rational Thermodynamics	313
A5.1. Introduction	313
A5.2. Fundamental hypotheses and axioms	314
A5.2.1. Basic hypotheses	314
A5.2.2. Basic axioms	316
A5.3. Constitutive laws	318
A5.4. Case of the reactive mixture	320
A5.4.1. Principle of material frame indifference	320
A5.4.2. Constitutive laws for a reactive mixture	321
A5.5. Critical remarks	324
Appendix 6. Torsors and Distributors in Solid Mechanics	325
A6.1. Introduction	325
A6.1.1. Torsor.	325
A6.1.2. Distributor	325
A6.1.3. Power.	326
A6.2. Derivatives of torsors and distributors which depend on a single position parameter	326
A6.2.1. Derivative of the velocity distributor	327
A6.2.2. Derivative of the tensor of forces	328
A6.3. Derivatives of torsors and distributors dependent on two positional parameters.	328
A6.3.1. Expression of the velocity distributor	329
A6.3.2. Derivative of the velocity distributor	329
Appendix 7. Virtual Powers in a Medium with a Single Constituent	331
A7.1. Introduction	331
A7.2. Virtual powers of a system of n material points	332
A7.3. Virtual power law	333
A7.4. The rigid body and systems of rigid bodies	333
A7.4.1. The rigid body.	333
A7.4.2. System of rigid bodies, concept of a link.	334
A7.5. 3D deformable continuous medium	335
A7.5.1. First gradient theory	335

A7.5.2. A 3D case of perfect internal linkage: the incompressible perfect fluid	337
A7.5.3. Second gradient theory	337
A7.6. 1D continuous deformable medium	338
A7.6.1. First gradient theory	338
A7.6.2. A 1D case of perfect internal linkage: perfectly flexible and inextensible wires	340
A7.7. 2D deformable continuous medium	340
Bibliography	343
Index	355
