

Table of Contents

Preface	xi
Chapter 1. Advanced Mapping of Environmental Data: Introduction	1
M. KANEVSKI	
1.1. Introduction	1
1.2. Environmental data analysis: problems and methodology	3
1.2.1. Spatial data analysis: typical problems.	3
1.2.2. Spatial data analysis: methodology	5
1.2.3. Model assessment and model selection	8
1.3. Resources	12
1.3.1. Books, tutorials	12
1.3.2. Software	12
1.4. Conclusion	14
1.5. References	15
Chapter 2. Environmental Monitoring Network Characterization and Clustering	19
D. TUIA and M. KANEVSKI	
2.1. Introduction	19
2.2. Spatial clustering and its consequences	20
2.2.1. Global parameters	21
2.2.2. Spatial predictions	22
2.3. Monitoring network quantification.	23
2.3.1. Topological quantification	23
2.3.2. Global measures of clustering	23
2.3.2.1. Topological indices	23
2.3.2.2. Statistical indices	24
2.3.3. Dimensional resolution: fractal measures of clustering	26
2.3.3.1. Sandbox method	27

2.3.3.2. Box-counting method	30
2.3.3.3. Lacunarity	33
2.4. Validity domains	34
2.5. Indoor radon in Switzerland: an example of a real monitoring network	36
2.5.1. Validity domains.	37
2.5.2. Topological index	37
2.5.3. Statistical indices	38
2.5.3.1. Morisita index	38
2.5.3.2. <i>K</i> -function	39
2.5.4. Fractal dimension	40
2.5.4.1. Sandbox and box-counting fractal dimension	40
2.5.4.2. Lacunarity	42
2.6. Conclusion	43
2.7. References	44
Chapter 3. Geostatistics: Spatial Predictions and Simulations	47
E. SAVELIEVA, V. DEMYANOV and M. MAIGNAN	
3.1. Assumptions of geostatistics	47
3.2. Family of kriging models	49
3.2.1. Simple kriging	50
3.2.2. Ordinary kriging	50
3.2.3. Basic features of kriging estimation	51
3.2.4. Universal kriging (kriging with trend)	56
3.2.5. Lognormal kriging.	56
3.3. Family of co-kriging models	58
3.3.1. Kriging with linear regression.	58
3.3.2. Kriging with external drift	58
3.3.3. Co-kriging	59
3.3.4. Collocated co-kriging.	60
3.3.5. Co-kriging application example.	61
3.4. Probability mapping with indicator kriging.	64
3.4.1. Indicator coding	64
3.4.2. Indicator kriging	66
3.4.3. Indicator kriging applications	69
3.4.3.1. Indicator kriging for ^{241}Am analysis	69
3.4.3.2. Indicator kriging for aquifer layer zonation	71
3.4.3.3. Indicator kriging for localization of crab crowds	74
3.5. Description of spatial uncertainty with conditional stochastic simulations	76
3.5.1. Simulation vs. estimation.	76
3.5.2. Stochastic simulation algorithms	77
3.5.3. Sequential Gaussian simulation	81
3.5.4. Sequential indicator simulations	84

3.5.5. Co-simulations of correlated variables	88
3.6. References	92

Chapter 4. Spatial Data Analysis and Mapping Using Machine Learning

Algorithms	95
-----------------------------	----

F. RATLE, A. POZDNOUKHOV, V. DEMYANOV, V. TIMONIN and
E. SAVELIEVA

4.1. Introduction	95
4.2. Machine learning: an overview	96
4.2.1. The three learning problems	96
4.2.2. Approaches to learning from data	100
4.2.3. Feature selection	101
4.2.4. Model selection	103
4.2.5. Dealing with uncertainties	107
4.3. Nearest neighbor methods	108
4.4. Artificial neural network algorithms	109
4.4.1. Multi-layer perceptron neural network	109
4.4.2. General Regression Neural Networks	119
4.4.3. Probabilistic Neural Networks	122
4.4.4. Self-organizing (Kohonen) maps	124
4.5. Statistical learning theory for spatial data: concepts and examples	131
4.5.1. VC dimension and structural risk minimization	131
4.5.2. Kernels	132
4.5.3. Support vector machines	133
4.5.4. Support vector regression	137
4.5.5. Unsupervised techniques	141
4.5.5.1. Clustering	142
4.5.5.2. Nonlinear dimensionality reduction	144
4.6. Conclusion	146
4.7. References	146

Chapter 5. Advanced Mapping of Environmental Spatial Data:

Case Studies	149
-------------------------------	-----

L. FORESTI, A. POZDNOUKHOV, M. KANEVSKI, V. TIMONIN,
E. SAVELIEVA, C. KAISER, R. TAPIA and R. PURVES

5.1. Introduction	149
5.2. Air temperature modeling with machine learning algorithms and geostatistics	150
5.2.1. Mean monthly temperature	151
5.2.1.1. Data description	151
5.2.1.2. Variography	152
5.2.1.3. Step-by-step modeling using a neural network	153

5.2.1.4. Overfitting and undertraining	154
5.2.1.5. Mean monthly air temperature prediction mapping	156
5.2.2. Instant temperatures with regionalized linear dependencies	159
5.2.2.1. The Föhn phenomenon	159
5.2.2.2. Modeling of instant air temperature influenced by Föhn	160
5.2.3. Instant temperatures with nonlinear dependencies	163
5.2.3.1. Temperature inversion phenomenon	163
5.2.3.2. Terrain feature extraction using Support Vector Machines	164
5.2.3.3. Temperature inversion modeling with MLP	165
5.3. Modeling of precipitation with machine learning and geostatistics	168
5.3.1. Mean monthly precipitation	169
5.3.1.1. Data description	169
5.3.1.2. Precipitation modeling with MLP	171
5.3.2. Modeling daily precipitation with MLP	173
5.3.2.1. Data description	173
5.3.2.2. Practical issues of MLP modeling	174
5.3.2.3. The use of elevation and analysis of the results	177
5.3.3. Hybrid models: NNRK and NNRS	179
5.3.3.1. Neural network residual kriging	179
5.3.3.2. Neural network residual simulations	182
5.3.4. Conclusions	184
5.4. Automatic mapping and classification of spatial data using machine learning	185
5.4.1. k-nearest neighbor algorithm	185
5.4.1.1. Number of neighbors with cross-validation	187
5.4.2. Automatic mapping of spatial data	187
5.4.2.1. KNN modeling	188
5.4.2.2. GRNN modeling	190
5.4.3. Automatic classification of spatial data	192
5.4.3.1. KNN classification	193
5.4.3.2. PNN classification	194
5.4.3.3. Indicator kriging classification	197
5.4.4. Automatic mapping – conclusions	199
5.5. Self-organizing maps for spatial data – case studies	200
5.5.1. SOM analysis of sediment contamination	200
5.5.2. Mapping of socio-economic data with SOM	204
5.6. Indicator kriging and sequential Gaussian simulations for probability mapping. Indoor radon case study	209
5.6.1. Indoor radon measurements	209
5.6.2. Probability mapping	211
5.6.3. Exploratory data analysis	212
5.6.4. Radon data variography	216
5.6.4.1. Variogram for indicators	216

5.6.4.2. Variogram for Nscores	217
5.6.5. Neighborhood parameters	218
5.6.6. Prediction and probability maps.	219
5.6.6.1. Probability maps with IK	219
5.6.6.2. Probability maps with SGS	220
5.6.7. Analysis and validation of results.	221
5.6.7.1. Influence of the simulation net and the number of neighbors	221
5.6.7.2. Decision maps and validation of results	222
5.6.8. Conclusions.	225
5.7. Natural hazards forecasting with support vector machines – case study:	
snow avalanches	225
5.7.1. Decision support systems for natural hazards.	227
5.7.2. Reminder on support vector machines	228
5.7.2.1. Probabilistic interpretation of SVM	229
5.7.3. Implementing an SVM for avalanche forecasting	230
5.7.4. Temporal forecasts	230
5.7.4.1. Feature selection	231
5.7.4.2. Training the SVM classifier	232
5.7.4.3. Adapting SVM forecasts for decision support.	233
5.7.5. Extending the SVM to spatial avalanche predictions	237
5.7.5.1. Data preparation	237
5.7.5.2. Spatial avalanche forecasting.	239
5.7.6. Conclusions.	241
5.8. Conclusion	241
5.9. References	242
Chapter 6. Bayesian Maximum Entropy – BME	247
G. CHRISTAKOS	
6.1. Conceptual framework	247
6.2. Technical review of BME	251
6.2.1. The spatiotemporal continuum	251
6.2.2. Separable metric structures	253
6.2.3. Composite metric structures	255
6.2.4. Fractal metric structures	256
6.3. Spatiotemporal random field theory	257
6.3.1. Pragmatic S/TRF tools	258
6.3.2. Space-time lag dependence: ordinary S/TRF	260
6.3.3. Fractal S/TRF	262
6.3.4. Space-time heterogenous dependence: generalized S/TRF	264
6.4. About BME	267
6.4.1. The fundamental equations	267
6.4.2. A methodological outline	273

x	Advanced Mapping of Environmental Data
6.4.3. Implementation of BME: the SEKS-GUI	275
6.5. A brief review of applications	281
6.5.1. Earth and atmospheric sciences	282
6.5.2. Health, human exposure and epidemiology	291
6.6. References	299
List of Authors	307
Index	309
