INTRODUCTION	ix
CHAPTER 1. MICROALGAE	1
1.1. Definition	1
1.2. Characteristics	2
1.3. Uses of microalgae	3
1.3.1. Nutrition	3
1.3.2. Pharmaceuticals	4
1.3.3. Cosmetics	4
1.3.4. Energy	4
1.3.5. Environmental field	6
1.4. Microalgae cultivation systems	10
1.4.1. Open systems	10
1.4.2. Closed systems: photobioreactors	12
1.5. Factors affecting algae cultivation	14
1.5.1. Light	15
1.5.2. Temperature	16
1.5.3. pH	17
1.5.4. Nutrients	18
1.5.5. Medium salinity	20
1.5.6. Agitation	20
1.5.7. Gas–liquid mass transfer	21
1.6. Conclusion	21
CHAPTER 2. CO₂ BIOFIXATION	23
2.1. Selection of microalgae species	25
2.1.1. Photosynthetic activity	25
2.1.2. CO ₂ concentrating mechanism “CCM”	26

2.1.3. Choice of the microalgae species	27
2.2. Optimization of the photobioreactor design.	31
2.3. Conclusion	32
CHAPTER 3. BIOPROCESS MODELING	33
3.1. Operating modes	33
3.1.1. Batch mode	34
3.1.2. Fed-batch mode	35
3.1.3. Continuous mode	35
3.2. Growth rate modeling.	37
3.2.1. General models.	38
3.2.2. Droop's model.	39
3.2.3. Models dealing with light effect	40
3.2.4. Model dealing with carbon effect	41
3.2.5. Models of the simultaneous influence of several parameters.	42
3.2.6. Choice of growth rate model	45
3.3. Mass balance models	47
3.4. Model parameter identification	49
3.5. Example: <i>Chlorella vulgaris</i> culture	51
3.5.1. Experimental set-up	51
3.5.2. Modeling	54
3.5.3. Parametric identification	57
3.6. Conclusion	63
CHAPTER 4. ESTIMATION OF BIOMASS CONCENTRATION	65
4.1. Generalities on estimation.	65
4.2. State of the art	68
4.3. Kalman filter	72
4.3.1. Principle	72
4.3.2. Discrete Kalman filter	73
4.3.3. Discrete extended Kalman filter	75
4.3.4. Kalman filter settings	77
4.3.5. Example	78
4.4. Asymptotic observer.	80
4.4.1. Principle	80
4.4.2. Example	82
4.5. Interval observer	84
4.5.1. Principle	84
4.5.2. Example	86

4.6. Experimental validation on <i>Chlorella vulgaris</i> culture	98
4.7. Conclusion	101
CHAPTER 5. BIOPROCESS CONTROL	103
5.1. Determination of optimal operating conditions	104
5.1.1. Optimal operating conditions	104
5.1.2. Optimal set-point	104
5.2. Generalities on control	106
5.3. State of the art	108
5.4. Generic Model Control	110
5.4.1. Principle	110
5.4.2. Advantages and disadvantages	112
5.4.3. Example	113
5.5. Input/output linearizing control	114
5.5.1. Principle	114
5.5.2. Advantages and disadvantages	116
5.5.3. Example	117
5.6. Nonlinear model predictive control	119
5.6.1. Principle	119
5.6.2. Nonlinear Model Predictive Control	121
5.6.3. Advantages and disadvantages	126
5.6.4. Example	127
5.7. Application to <i>Chlorella vulgaris</i> cultures	132
5.7.1. GMC law performance	135
5.7.2. Performance of the predictive control law	139
5.8. Conclusion	144
CONCLUSION.	147
BIBLIOGRAPHY	153
INDEX	173
